

Pin Description

Standard Mode Pin #	Pin Name	Туре	Description			
9	A_EM	Input	Output emphasis adjustment for channel A. (See Configuration Table) Digital control with $200 \text{K}\Omega$ pull-up resistor.			
17	A_EQ	Input	Channel A Equalization adjustment is active. (See Configuration Table) Tri-level input pin with 100K Ω pull-up and 100K Ω pull-down resistors.			
1 2	AI+ AI-	Input	CML input forward channel A with internal 50 Ω pull-up resistors connected to VBIAS (100 Ω differential).			
15 14	AO+ AO-	Output	CML output channel A with internal 50 Ω pull-up resistors connected to VBIAS (100 Ω differential).			
8	B_EM	Input	Output emphasis adjustment for channel B. (See Configuration Table) Digital control with $200K\Omega$ pull-up resistor.			
19	B_EQ	Input	Tri-level input pin with 100K pull-up and 100K pull-down resistors. (See Configuration Table)			
11 12	BI+ BI-	Input	CML input return channel B with internal 50K Ω pull-up, resistor connected to VBIAS (100 Ω differential).			
5 4	BO+ BO-	Output	Positive CML output channel B with internal 50 Ω pull-up resistor connected to VBIAS (100 Ω differential).			
7	EN	Input	Chip Enable "High" provides normal operation. "Low" for power down mode. With i 200 K Ω pull-up resistor.			
Center Pad	GND	GND	Supply ground.			
10, 20	VDD	Power	3.3V supply voltage ± 10%			
3	TDet_B#	Output	Termination detect output for channel B-Active Low, open drain. Low: HDD Termination present. High: HDD Termination NOT present.			
13	TDet_A#	Output	Termination detect output for channel A-Active Low, open drain. Low: HDD Termination present. High: HDD Termination NOT present.			
			Termination Detect Enable (200K Ω internal pull-up resistor)			
18	TDet_EN	Det_EN Input	High: Enable Termination Detect for eSATA application or hot plug Device application			
			Low: Disable Termination Detect for internal SATA application.			
6, 16	NC		No Connection internally.			

•		•
A_EM/B_EM	3 Gb/s	6 Gb/s
0	550mV pp	650mV pp
1	550mV pp + 3dB Pre-emphasis	650mV pp + 1.5dB Pre-emphasis

Configuration Table - Output Pre-emphasis/Swing Setting

Configuration Table - Input Equalizer

A_EQ/B_EQ	1.5 Gb/s	3 Gb/s	6Gb/s
0	1 dB	2.5 dB	3 dB
floating	2.5 dB	5 dB	6 dB
1	4 dB	7.5 dB	9 dB

Termination Detect Feature:

Termination Detect is a power saving feature. The user can enable TDet_EN (set to High) for eSATA application as it would save more power when there is no external HDD connection. But for internal SATA application, TDet_EN should be set to LOW because internal HDD is always on and termination is always there.

When Redriver doesn't detect Host or HDD termination, there will be about 12us detect pulse width with 50us detect period at the output of ReDriver. Once the termination is detected, the detect period will change to about 40ms. Anyway when the signal is detected at the input of redriver, there will not be any detect pulse at both the output side of redriver.

Maximum Ratings

(Above which useful life may be impaired. For user guidelines, not tested.)

Storage Temperature65°C to +150°C
Supply Voltage to Ground Potential0.5V to +4.6V
DC SIG Voltage0.5V to V_{DD} +0.5V
Output Current25mA to +25mA
Power Dissipation Continuous 500mW
Operating Temperature40°C to +85°C
ESD, Human Body Model8kV to 8kV

Note:

Stresses greater than those listed under MAXIMUM RAT-INGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

AC/DC Electrical Characteristics

Symbol	Parameter	Conditions	Min.	Typ. ⁽¹⁾	Max.	Units	
VDD	Power Supply Voltage		3.0		3.6	V	
PSTANDBY	Supply Power, Standby	EN = 0		0.07	0.7		
PUNPLUG	Supply Power, HDD unplugged	No HDD attached, TDet_EN = High		3.6	11		
PSLUMBER	Supply Power, Slumber	TDet_EN = Low		36	50	mW	
PACTIVE	Supply Power, Active	$EN = 1 A/B_EM=0$ DIFFP-P \geq VTH-SD		254	317		
IDD-STANDBY	Supply Current Standby	EN = 0		0.02	0.2		
IDD-UNPLUG	Supply Current, HDD unplugged	No HDD attached, TDet_EN = High		1	3		
IDD-SLUMBER	Supply Current Slumber	TDet_EN = Low		11	14		
I _{DD-ACTIVE}	Supply Current Active	EN = 1, input = 600mVppd, A/B_EM=0		77	88		
tPD	Latency	From input to output		0.7		ns	
CML Receiver	Input						
Z _{RX-DC}	DC Input Impedance		40	50	60		
Z _{RX} -DIFF-DC	DC Differential Input Impedance		80	100	120	Ohm	
VRX-DIFFp-p	Differential Input Peak-to-peak Voltage		0.2		1.2	V	
VRX-CM-ACP	AC Peak Common Mode Input Voltage				150	mV	
VTH-SD	Signal detect Threshold	EN = 1	50		200 ⁽²⁾	mVppd	

Note:

1. Typical values are at VDD = 3.3V, TA = 25°C ambient and maximum loading.

2. Using Compliance test at 1.5Gbps, 3Gbps and 6Gbps. Also using OOB (OOB is formed by ALIGNp primitive or D24.3) test patterns at 1.5Gbps. The ALIGN primitive (K28.5+D10.2+D27.3 = 0011111010+0101010101+0010011100). The D24.3 = 001100110011001100110011.

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or

2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the

failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
