

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings†

| | |
|--|-----------------------------------|
| V _{DD} | 7.0V |
| Input current (V _{DD}) | 10 mA |
| Output current (\overline{RST}) | 10 mA |
| Rated Rise Time of V _{DD} | 100V/ μ s |
| All inputs and outputs (except \overline{RST}) w.r.t. V _{SS} | -0.6V to (V _{DD} + 1.0V) |
| \overline{RST} output w.r.t. V _{SS} | -0.6V to 13.5V |
| Storage temperature | -65°C to + 150°C |
| Ambient temp. with power applied | -40°C to + 125°C |
| Maximum Junction temp. with power applied | 150°C |
| ESD protection on all pins | \geq 2 kV |

† **Notice:** Stresses above those listed under "Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

DC CHARACTERISTICS

Electrical Specifications: Unless otherwise indicated, all limits are specified for: V_{DD} = 1V to 5.5V, R_{P_U} = 100 k Ω (**MCP121** only), T_A = -40°C to +125°C.

| Parameters | | Sym | Min | Typ | Max | Units | Conditions |
|--|---------------------------------------|-----------------|-----|-----|------|---------|---|
| Operating Voltage Range | V _{DD} | V _{DD} | 1.0 | — | 5.5 | V | |
| Specified V _{DD} Value to RST low | V _{DD} | V _{DD} | 1.0 | — | | V | I _{RST} = 10 uA, V _{RST} < 0.2V |
| Operating Current | MCP102, MCP103, MCP121 | I _{DD} | — | < 1 | 1.75 | μ A | Reset Power-up Timer (t _{RPU}) Inactive |
| | | | — | — | 20.0 | μ A | Reset Power-up Timer (t _{RPU}) Active |
| | MCP131 | I _{DD} | — | < 1 | 1.75 | μ A | V _{DD} > V _{TRIP} and Reset Power-up Timer (t _{RPU}) Inactive |
| | | | — | — | 75 | μ A | V _{DD} < V _{TRIP} and Reset Power-up Timer (t _{RPU}) Inactive (Note 3) |
| | | | — | — | 90 | μ A | Reset Power-up Timer (t _{RPU}) Active (Note 4) |

- Note 1:** Trip point is $\pm 1.5\%$ from typical value.
2: Trip point is $\pm 2.5\%$ from typical value.
3: RST output is forced low. There is a current through the internal pull-up resistor.
4: This includes the current through the internal pull-up resistor and the reset power-up timer.
5: This specification allows this device to be used in PICmicro® microcontroller applications that require In-Circuit Serial Programming™ (ICSP™) (see device-specific programming specifications for voltage requirements). This specification DOES NOT allow a continuous high voltage to be present on the open-drain output pin (V_{OUT}). The total time that the V_{OUT} pin can be above the maximum device operational voltage (5.5V) is 100s. Current into the V_{OUT} pin should be limited to 2 mA and it is recommended that the device operational temperature be maintained between 0°C to 70°C (+25°C preferred). For additional information, please refer to Figure 2-33.
6: This parameter is established by characterization and not 100% tested.

DC CHARACTERISTICS (CONTINUED)

Electrical Specifications: Unless otherwise indicated, all limits are specified for: $V_{DD} = 1V$ to $5.5V$, $R_{PU} = 100\text{ k}\Omega$ (**MCP121** only), $T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$.

| Parameters | | Sym | Min | Typ | Max | Units | Conditions | |
|---|-------------------|------------|----------------|-----------|---------------------|-----------------------|---|--|

3.0 PIN DESCRIPTION

The descriptions of the pins are listed in Table 3-1.

TABLE 3-1: PIN FUNCTION TABLE

| Pin No. | | Symbol | Function |
|----------------------------|--------|------------------|---|
| MCP102 MCP121 MCP131 | MCP103 | | |
| 1 | 1 | \overline{RST} | Output State V_{DD} Falling: H = V _{DD} > V _{TRIP} L = V _{DD} < V _{TRIP} V_{DD} Rising: H = V _{DD} > V _{TRIP} + V _{HYS} L = V _{DD} < V _{TRIP} + V _{HYS} |
| 2 | 3 | V _{DD} | Positive power supply |
| 3 | 2 | V _{SS} | Ground reference |

4.0 APPLICATION INFORMATION

For many of today's microcontroller applications, care must be taken to prevent low-power conditions that can cause many different system problems. The most common causes are brown-out conditions, where the system supply drops below the operating level momentarily. The second most common cause is when a slowly decaying power supply causes the microcontroller to begin executing instructions without sufficient voltage to sustain volatile memory (RAM), thus producing indeterminate results. Figure 4-1 shows a typical application circuit.

The MCP102/103/121/131 are voltage supervisor devices designed to keep a microcontroller in reset until the system voltage has reached and stabilized at the proper level for reliable system operation. These devices also operate as protection from brown-out conditions.

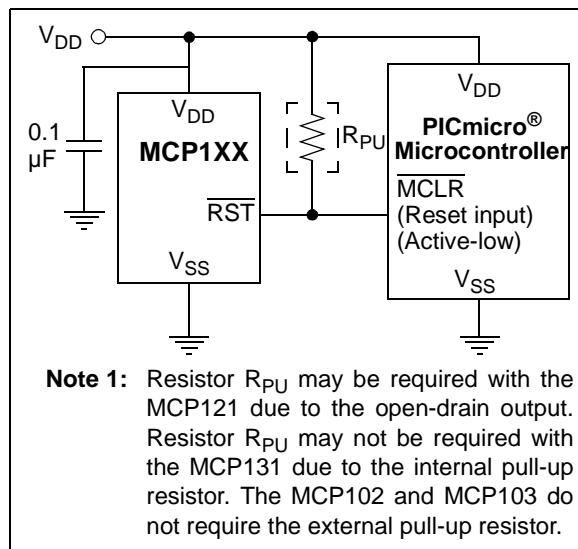

FIGURE 4-1: Typical Application Circuit.

4.1 RST Operation

The \overline{RST} output pin operation determines how the device can be used and indicates when the system should be forced into reset. To accomplish this, an internal voltage reference is used to set the voltage trip point (V_{TRIP}). Additionally, there is a hysteresis on this trip point.

When the falling edge of V_{DD} crosses this voltage threshold, the reset power-down timer (T_{RPD}) starts. When this delay timer times out, the \overline{RST} pin is forced low.

When the rising-edge of V_{DD} crosses this voltage threshold, the reset power-up timer (T_{RPU}) starts. When this delay timer times out, the \overline{RST} pin is forced high, T_{RPU} is active and there is additional system current.

The actual voltage trip point (V_{TRIPAC}) will be between the minimum trip point ($V_{TRIPMIN}$) and the maximum trip point ($V_{TRIPMAX}$). The hysteresis on this trip point and the delay timer (T_{RPU}) are to remove any "jitter" that would occur on the \overline{RST} pin when the device V_{DD} is at the trip point.

Figure 4-2 shows the waveform of the \overline{RST} pin as determined by the V_{DD} voltage, while Table 4-1 shows the state of the \overline{RST} pin. The V_{TRIP} specification is for falling V_{DD} voltages. When the V_{DD} voltage is rising, the \overline{RST} will not be driven high until V_{DD} is at $V_{TRIP} + V_{HYS}$. Once V_{DD} has crossed the voltage trip point, there is also a minimal delay time (T_{RPD}) before the \overline{RST} pin is driven low.

TABLE 4-1: \overline{RST} PIN STATES

| Device | State of \overline{RST} Pin when: | | Output Driver |
|--------|-------------------------------------|-------------------------------|---------------------------|
| | $V_{DD} < V_{TRIP}$ | $V_{DD} > V_{TRIP} + V_{HYS}$ | |
| MCP102 | L | H | Push-pull |
| MCP103 | L | H | Push-pull |
| MCP121 | L | H ⁽¹⁾ | Open-drain ⁽¹⁾ |
| MCP131 | L | H ⁽²⁾ | Open-drain ⁽²⁾ |

Note 1: Requires External Pull-up resistor

2: Has Internal Pull-up resistor

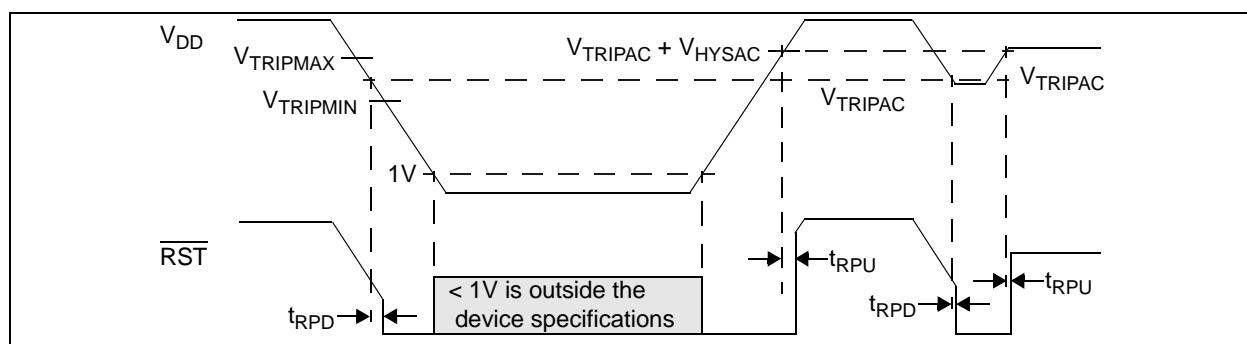

FIGURE 4-2: \overline{RST} Operation as Determined by the V_{TRIP} and V_{HYS} .

4.2 Negative Going V_{DD} Transients

The minimum pulse width (time) required to cause a reset may be an important criteria in the implementation of a Power-on Reset (POR) circuit. This time is referred to as transient duration, defined as the amount of time needed for these supervisory devices to respond to a drop in V_{DD} . The transient duration time is dependant on the magnitude of $V_{TRIP} - V_{DD}$. Generally speaking, the transient duration decreases with increases in $V_{TRIP} - V_{DD}$.

Figure 4-3 shows a typical transient duration vs. reset comparator overdrive, for which the MCP102/103/121/131 will not generate a reset pulse. It shows that the farther below the trip point the transient pulse goes, the duration of the pulse required to cause a reset gets shorter. Figure 2-32 shows the transient response characteristics for the MCP102/103/121/131.

A 0.1 μF bypass capacitor, mounted as close as possible to the V_{DD} pin, provides additional transient immunity (refer to Figure 4-1).

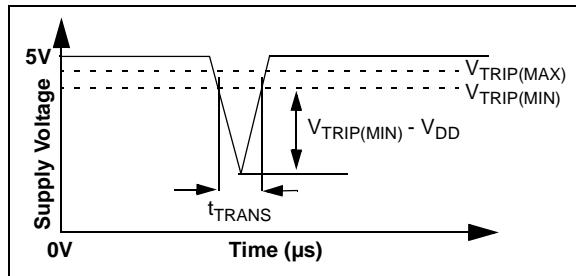

FIGURE 4-3: Example of Typical Transient Duration Waveform.

4.3 Reset Power-up Timer (t_{RPU})

Figure 4-4 illustrates the device current states. While the system is powering down, the device has a low current. This current is dependent on the device V_{DD} and trip point. When the device V_{DD} rises through the voltage trip point (V_{TRIP}), an internal timer starts. This timer consumes additional current until the RST pin is driven (or released) high. This time is known as the Reset Power-up Time (t_{RPU}). Figure 4-4 shows when t_{RPU} is active (device consuming additional current).

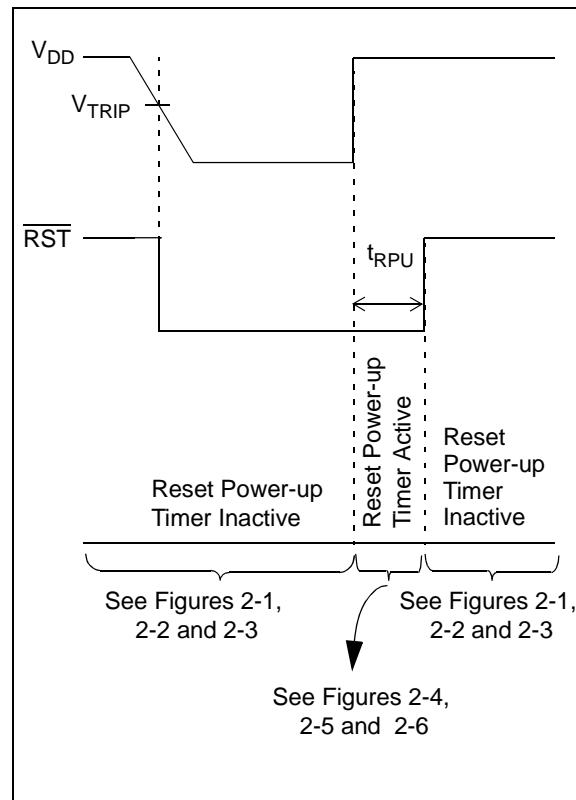

FIGURE 4-4: Reset Power-up Timer Waveform.

4.3.1 EFFECT OF TEMPERATURE ON RESET POWER-UP TIMER (T_{RPU})

The Reset Power-up timer time-out period (t_{RPU}) determines how long the device remains in the reset condition. This is affected by both V_{DD} and temperature. Typical responses for different V_{DD} values and temperatures are shown in Figures 2-26, 2-27 and 2-28.

MCP102/103/121/131

4.4 Using in PICmicro® Microcontroller, ICSP™ Applications (MCP121 only)

Figure 4-5 shows the typical application circuit for using the MCP121 for voltage supervisory function when the PICmicro microcontroller will be programmed via the ICSP feature. Additional information is available in TB087, "Using Voltage Supervisors with PICmicro® Microcontroller Systems which Implement In-Circuit Serial Programming™", DS91087.

Note: It is recommended that the current into the RST pin be current limited by a 1 kΩ resistor.

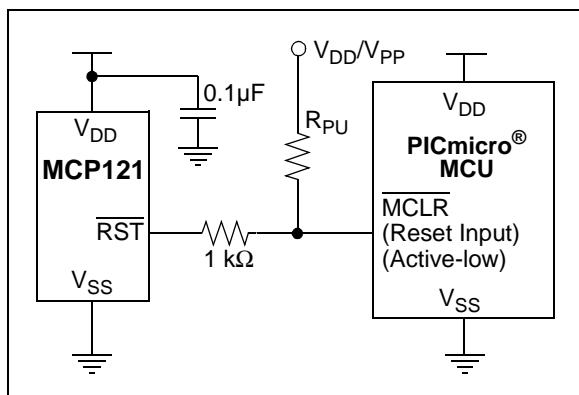

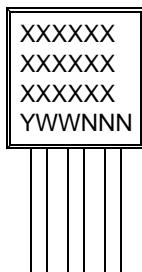

FIGURE 4-5: Typical Application Circuit for PICmicro® Microcontroller with the ICSP™ feature.

NOTES:

APPENDIX A: REVISION HISTORY

Revision B (March 2005)

The following is the list of modifications:

1. Added **Section 4.4 “Using in PICmicro® Microcontroller, ICSP™ Applications (MCP121 only)”** on using the MCP121 in PICmicro microcontroller ICSP applications.
2. Added V_{ODH} specifications in **Section 1.0 “Electrical Characteristics”** (for ICSP applications).
3. Added Figure 2-33.
4. Updated SC-70 package markings and added Pb-free marking information to **Section 5.0 “Packaging information”**.
5. Added **Appendix A: “Revision History”**.

Revision A (August 2004)

- Original Release of this Document.

NOTES:

PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

| PART NO. - X XXX X / XX | | | | | Examples: |
|---|------------------|--------------------|-------------------|---------|--|
| Device | Tape/Reel Option | Monitoring Options | Temperature Range | Package | |
| Device: MCP102: MicroPower Voltage Supervisor, push-pull MCP102T: MicroPower Voltage Supervisor, push-pull (Tape and Reel) MCP103: MicroPower Voltage Supervisor, push-pull MCP103T: MicroPower Voltage Supervisor, push-pull (Tape and Reel) MCP121 MicroPower Voltage Supervisor, open-drain MCP121T: MicroPower Voltage Supervisor, open-drain (Tape and Reel) MCP131 MicroPower Voltage Supervisor, open-drain MCP131T: MicroPower Voltage Supervisor, open-drain (Tape and Reel) | | | | | a) MCP102T-195I/TT: Tape and Reel, 1.95V MicroPower Voltage Supervisor, push-pull, -40°C to +85°C, SOT-23B-3 package. b) MCP102-300E/TO: 3.00V MicroPower Voltage Supervisor, push-pull, -40°C to +125°C, TO-92-3 package. |
| Monitoring Options: 195 = 1.90V 240 = 2.32V 270 = 2.63V 300 = 2.93V 315 = 3.08V 450 = 4.38V 475 = 4.63V | | | | | a) MCP103T-270E/TT: Tape and Reel, 2.70V MicroPower Voltage Supervisor, push-pull, -40°C to +125°C, SOT-23B-3 package. b) MCP103T-475E/LB: Tape and Reel, 4.75V MicroPower Voltage Supervisor, push-pull, -40°C to +125°C, SC-70-3 package. |
| Temperature Range: I = -40°C to +85°C (MCP11X-195 only) E = -40°C to +125°C (Except MCP11X-195 only) | | | | | a) MCP121T-315I/LB: Tape and Reel, 3.15V MicroPower Voltage Supervisor, open-drain, -40°C to +125°C, SC-70-3 package. b) MCP121-300E/TO: 3.00V MicroPower Voltage Supervisor, open-drain, -40°C to +125°C, TO-92-3 package. |
| Package: TT = SOT-23B, 3-lead LB = SC-70, 3-lead TO = TO-92, 3-lead | | | | | a) MCP131T-195I/TT: Tape and Reel, 1.95V MicroPower Voltage Supervisor, open-drain, -40°C to +85°C, SOT-23B-3 package. b) MCP131-300E/TO: 3.00V MicroPower Voltage Supervisor, open-drain, -40°C to +125°C, TO-92-3 package. |

MCP102/103/121/131

NOTES:

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. **MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE.** Microchip disclaims all liability arising from this information and its use. Use of Microchip's products as critical components in life support systems is not authorized except with express written approval by Microchip. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

Trademarks

The Microchip name and logo, the Microchip logo, Accuron, dsPIC, KEELOQ, microID, MPLAB, PIC, PICmicro, PICSTART, PRO MATE, PowerSmart, rfPIC, and SmartShunt are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

AmpLab, FilterLab, Migratable Memory, MXDEV, MXLAB, PICMASTER, SEEVAL, SmartSensor and The Embedded Control Solutions Company are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Analog-for-the-Digital Age, Application Maestro, dsPICDEM, dsPICDEM.net, dsPICworks, ECAN, ECONOMONITOR, FanSense, FlexROM, fuzzyLAB, In-Circuit Serial Programming, ICSP, ICEPIC, MPASM, MPLIB, MPLINK, MPSIM, PICkit, PICDEM, PICDEM.net, PICLAB, PICtail, PowerCal, PowerInfo, PowerMate, PowerTool, rfLAB, rfPICDEM, Select Mode, Smart Serial, SmartTel, Total Endurance and WiperLock are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

**QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
=ISO/TS 16949:2002=**

Microchip received ISO/TS-16949:2002 quality system certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona and Mountain View, California in October 2003. The Company's quality system processes and procedures are for its PICmicro® 8-bit MCUs, KEELOQ® code hopping devices, Serial EEPROMS, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
