1. Open Circuit Inductance (OCL) test parameter: 100kHz, 0.10V_{rms}, 0.0A_{dc}

2. I_{DC}: DC current for an approximate temperature rise of 40°C without core loss. Derating is necessary for AC currents. Temperature rise is dependent upon several factors, including the PCB layout, trace thickness and width, air-flow and proximity to other heat generating components. It is recommended the part temperature not exceed 125°C under worst case operating conditions and therefore, the temperature rise should be verified in the end use application. I_{DC} testing was performed on a 19.05mm long x 6.35mm wide x 0.070mm thick copper trace in still air.

3. I_{sat}: Peak current for approximately 30% roll-off at +25°C.

4. K-factor: Used to determine B_{pp} for core loss (see graph).

B_{pp} = K * L * ΔI B_{pp}: (Gauss), K: (K-factor from table), L: (inductance in μH),

ΔI = (peak-to-peak ripple current in amps).

5. Part Number Definition: MPI4040R-XXX-R

• MPI4040R = product code and size

• X = version indicator

• XXX = inductance value in μH, R= decimal point - If no R is present, then last character equals the number of zeros

• -R suffix = RoHS compliant

† Transient pulse not to exceed 1 millisecond.

†† Maximum operating frequency less than 10MHz, consult factory for application specific values.

2. I_{rms}: DC current for an approximate temperature rise of 40°C without core loss. De-rating is necessary for AC currents. Temperature rise is dependent upon several factors, including the PCB pad layout, trace thickness and width, air-flow and proximity to other heat generating components. It is recommended the part temperature not exceed 125°C under worst case operating conditions and therefore, the temperature rise should be verified in the end use application. I_{rms} testing was performed on a 9.05mm long x 6.35mm wide x 0.20mm thick copper trace in still air.

3. I_{sat}: Peak current for approximately 30% rolloff at +25°C.

4. K-factor: Used to determine B_{pp} for core loss (see graph).

B_{pp} = K * L * DI.B_{pp}: (Gauss), K: (K-factor from table), L: (inductance in μH),

DI =(peak-to-peak ripple current in amps).

Soldering surfaces to be coplanar within 0.10 millimeters
PCB tolerances are ± 0.1 millimeters unless stated otherwise
Do not route traces or vias underneath the inductor

Packaging information (mm)

Supplied in tape and reel packaging:

MPI4040R1 = 5000 parts per 13" diameter reel

MPI4040R2 = 4500 parts per 13" diameter reel

MPI4040R3 = 3500 parts per 13" diameter reel

MPI4040R4 = 3000 parts per 13" diameter reel
