

8GB, 16GB, 32GB, 64GB, 128GB: e.MMC (Automotive) Features

Part Numbering Information

Micron® e.MMC memory devices are available in different configurations and densities.

Figure 1: e.MMC Part Numbering

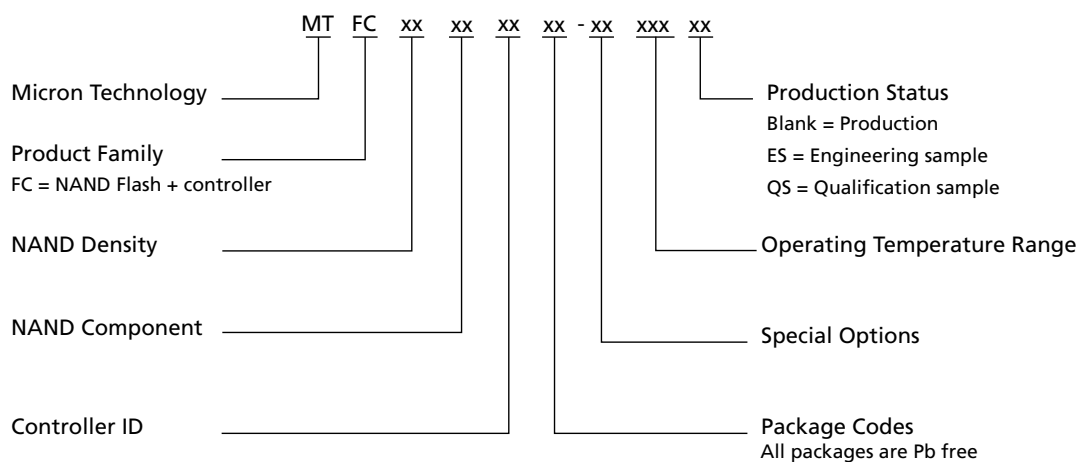

Table 1: Ordering Information

| Base Part Number | Density | Package | Shipping |
|--------------------|---------|-----------------------|---------------|
| MTFC8GAMALBH-AIT | 8GB | 153-ball TFBGA | Tray |
| MTFC8GAMALBH-AAT | | 11.5mm × 13mm × 1.1mm | Tape and reel |
| MTFC8GAMALNA-AIT | 8GB | 100-ball TBGA | Tray |
| MTFC8GAMALNA-AAT | | 14mm × 18mm × 1.2mm | Tape and reel |
| MTFC16GAPALBH-AIT | 16GB | 153-ball TFBGA | Tray |
| MTFC16GAPALBH-AAT | | 11.5mm × 13mm × 1.1mm | Tape and reel |
| MTFC16GAPALNA-AIT | 16GB | 100-ball TBGA | Tray |
| MTFC16GAPALNA-AAT | | 14mm × 18mm × 1.2mm | Tape and reel |
| MTFC32GAPALBH-AIT | 32GB | 153-ball TFBGA | Tray |
| MTFC32GAPALBH-AAT | | 11.5mm × 13mm × 1.1mm | Tape and reel |
| MTFC32GAPALNA-AIT | 32GB | 100-ball TBGA | Tray |
| MTFC32GAPALNA-AAT | | 14mm × 18mm × 1.2mm | Tape and reel |
| MTFC64GAPALBH-AIT | 64GB | 153-ball TFBGA | Tray |
| MTFC64GAPALBH-AAT | | 11.5mm × 13mm × 1.1mm | Tape and reel |
| MTFC64GAPALNA-AIT | 64GB | 100-ball TBGA | Tray |
| MTFC64GAPALNA-AAT | | 14mm × 18mm × 1.2mm | Tape and reel |
| MTFC128GAPALNS-AIT | 128GB | 153-ball TFBGA | Tray |
| MTFC128GAPALNS-AAT | | 11.5mm × 13mm × 1.2mm | Tape and reel |
| MTFC128GAPALNA-AIT | 128GB | 100-ball TBGA | Tray |
| MTFC128GAPALNA-AAT | | 14mm × 18mm × 1.2mm | Tape and reel |

8GB, 16GB, 32GB, 64GB, 128GB: e.MMC (Automotive) Features

Device Marking

Due to the size of the package, the Micron-standard part number is not printed on the top of the device. Instead, an abbreviated device mark consisting of a 5-digit alphanumeric code is used. The abbreviated device marks are cross-referenced to the Micron part numbers at the FBGA Part Marking Decoder site: www.micron.com/decoder.

e.MMC Performance

Performance in the following tables are retrieved with these conditions: Bus in x8 I/O; Temperature 25°C; Sequential access of 512KB chunk; Cache ON (write), Command queueing enabled with queue depth 8 commands in HS400.

Additional performance data, such as system performance on a specific application board, is provided in a separate document upon customer request.

Table 2: HS400 Performance

| Condition | Typical Values | | | Unit |
|------------------|----------------|------|-------------|------|
| | 8GB | 16GB | 32/64/128GB | |
| Sequential write | 40 | 60 | 120 | MB/s |
| Sequential read | 280 | 320 | 320 | MB/s |

Table 3: HS200 Performance

| Condition | Typical Values | | | Unit |
|------------------|----------------|------|-------------|------|
| | 8GB | 16GB | 32/64/128GB | |
| Sequential write | 40 | 60 | 100 | MB/s |
| Sequential read | 180 | 180 | 180 | MB/s |

e.MMC Current Consumption

Current consumption in the following tables are retrieved with these conditions: Bus in x8 I/O; $V_{CC} = 3.6V$ and $V_{CCQ} = 1.95V$; Temperature 25°C; Measurements done as average RMS current consumption; I_{CCQ} in READ operation measurements with tester load disconnected.

Table 4: HS400 Current Consumption

| Condition | Typical Values (I_{CC}/I_{CCQ}) | | | | | Unit |
|--------------------|-------------------------------------|---------|---------|---------|---------|------|
| | 8GB | 16GB | 32GB | 64GB | 128GB | |
| Write ¹ | 60/90 | 60/90 | 110/90 | 110/90 | 110/90 | mA |
| Read ¹ | 100/140 | 120/140 | 120/140 | 120/140 | 150/140 | mA |
| Sleep | 0/100 | 0/100 | 0/100 | 0/100 | 0/100 | μA |
| Auto standby | 60/110 | 80/110 | 80/110 | 120/110 | 250/110 | μA |

Note: 1. Command queueing enabled with queue depth 8 commands.

8GB, 16GB, 32GB, 64GB, 128GB: e.MMC (Automotive) Features

Table 5: HS200 Current Consumption

| Condition | Typical Values (I_{CC}/I_{CCQ}) | | | | | Unit |
|--------------|-------------------------------------|--------|--------|---------|---------|---------|
| | 8GB | 16GB | 32GB | 64GB | 128GB | |
| Write | 50/80 | 50/80 | 100/80 | 100/80 | 100/80 | mA |
| Read | 70/110 | 80/110 | 80/110 | 80/110 | 90/110 | mA |
| Sleep | 0/100 | 0/100 | 0/100 | 0/100 | 0/100 | μ A |
| Auto standby | 60/110 | 80/110 | 80/110 | 120/110 | 250/110 | μ A |

8GB, 16GB, 32GB, 64GB, 128GB: e.MMC (Automotive) Important Notes and Warnings

Important Notes and Warnings

Micron Technology, Inc. ("Micron") reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions. This document supersedes and replaces all information supplied prior to the publication hereof. You may not rely on any information set forth in this document if you obtain the product described herein from any unauthorized distributor or other source not authorized by Micron.

Automotive Applications. Products are not designed or intended for use in automotive applications unless specifically designated by Micron as automotive-grade by their respective data sheets. Distributor and customer/distributor shall assume the sole risk and liability for and shall indemnify and hold Micron harmless against all claims, costs, damages, and expenses and reasonable attorneys' fees arising out of, directly or indirectly, any claim of product liability, personal injury, death, or property damage resulting directly or indirectly from any use of non-automotive-grade products in automotive applications. Customer/distributor shall ensure that the terms and conditions of sale between customer/distributor and any customer of distributor/customer (1) state that Micron products are not designed or intended for use in automotive applications unless specifically designated by Micron as automotive-grade by their respective data sheets and (2) require such customer of distributor/customer to indemnify and hold Micron harmless against all claims, costs, damages, and expenses and reasonable attorneys' fees arising out of, directly or indirectly, any claim of product liability, personal injury, death, or property damage resulting from any use of non-automotive-grade products in automotive applications.

Critical Applications. Products are not authorized for use in applications in which failure of the Micron component could result, directly or indirectly in death, personal injury, or severe property or environmental damage ("Critical Applications"). Customer must protect against death, personal injury, and severe property and environmental damage by incorporating safety design measures into customer's applications to ensure that failure of the Micron component will not result in such harms. Should customer or distributor purchase, use, or sell any Micron component for any critical application, customer and distributor shall indemnify and hold harmless Micron and its subsidiaries, subcontractors, and affiliates and the directors, officers, and employees of each against all claims, costs, damages, and expenses and reasonable attorneys' fees arising out of, directly or indirectly, any claim of product liability, personal injury, or death arising in any way out of such critical application, whether or not Micron or its subsidiaries, subcontractors, or affiliates were negligent in the design, manufacture, or warning of the Micron product.

Customer Responsibility. Customers are responsible for the design, manufacture, and operation of their systems, applications, and products using Micron products. ALL SEMICONDUCTOR PRODUCTS HAVE INHERENT FAILURE RATES AND LIMITED USEFUL LIVES. IT IS THE CUSTOMER'S SOLE RESPONSIBILITY TO DETERMINE WHETHER THE MICRON PRODUCT IS SUITABLE AND FIT FOR THE CUSTOMER'S SYSTEM, APPLICATION, OR PRODUCT. Customers must ensure that adequate design, manufacturing, and operating safeguards are included in customer's applications and products to eliminate the risk that personal injury, death, or severe property or environmental damages will result from failure of any semiconductor component.

Limited Warranty. In no event shall Micron be liable for any indirect, incidental, punitive, special or consequential damages (including without limitation lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort, warranty, breach of contract or other legal theory, unless explicitly stated in a written agreement executed by Micron's duly authorized representative.

8GB, 16GB, 32GB, 64GB, 128GB: e.MMC (Automotive) General Description

General Description

Micron e.MMC is a communication and mass data storage device that includes a Multi-MediaCard (MMC) interface, a NAND Flash component, and a controller on an advanced 12-signal bus, which is compliant with the MMC system specification. Its cost per bit, small package sizes, and high reliability make it an ideal choice for automotive applications, including information and entertainment, navigation tools, advanced driving assistance systems, and a variety of other industrial and portable products.

The nonvolatile e.MMC draws no power to maintain stored data, delivers high performance across a wide range of operating temperatures, and resists shock and vibration disruption.

Signal Descriptions

Table 6: Signal Descriptions

| Symbol | Type | Description |
|-------------------------------|--------------|--|
| CLK | Input | Clock: Each cycle of the clock directs a transfer on the command line and on the data line(s). The frequency can vary between the minimum and the maximum clock frequency. |
| RST_n | Input | Reset: The RST_n signal is used by the host for resetting the device, moving the device to the pre-idle state. By default, the RST_n signal is temporarily disabled in the device. The host must set ECSD register byte 162, bits[1:0] to 0x1 to enable this functionality before the host can use it. |
| CMD | I/O | Command: This signal is a bidirectional command channel used for command and response transfers. The CMD signal has two bus modes: open-drain mode and push-pull mode (see Operating Modes). Commands are sent from the MMC host to the device, and responses are sent from the device to the host. |
| DAT[7:0] | I/O | Data I/O: These are bidirectional data signals. The DAT signals operate in push-pull mode. By default, after power-on or assertion of the RST_n signal, only DAT0 is used for data transfer. The MMC controller can configure a wider data bus for data transfer either using DAT[3:0] (4-bit mode) or DAT[7:0] (8-bit mode). e-MMC includes internal pull-up resistors for data lines DAT[7:1]. Immediately after entering the 4-bit mode, the device disconnects the internal pull-up resistors on the DAT[3:1] lines. Upon entering the 8-bit mode, the device disconnects the internal pull-ups on the DAT[7:1] lines. |
| DS | Output | Data strobe: Generated by the device and used for data output and CRC status response output in HS400 mode. The frequency of this signal follows the frequency of CLK. For data output, each cycle of this signal directs two bits transfer (2x) on the data, one bit for the positive edge and the other bit for the negative edge. For CRC status response output, the CRC status is latched on the positive edge only, and is "Don't Care" on the negative edge. |
| VSF[7:1] | Input/output | Vendor specific function: VSF1, VSF2, VSF3, VSF4, VSF5, VSF6, and VSF7 are internally connected. |
| V _{CC} | Supply | V _{CC} : NAND interface (I/F) I/O and NAND Flash power supply. |
| V _{CCQ} | Supply | V _{CCQ} : e-MMC controller core and e-MMC I/F I/O power supply. |
| V _{SS} ¹ | Supply | V _{SS} : NAND I/F I/O and NAND Flash ground connection. |
| V _{SSQ} ¹ | Supply | V _{SSQ} : e-MMC controller core and e-MMC I/F ground connection. |
| V _{DDIM} | | Internal voltage node: At least a 0.1µF capacitor is required to connect V _{DDIM} to ground. A 1µF capacitor is recommended; Do not tie to supply voltage or ground. |
| NC | – | No connect: No internal connection is present. |
| RFU | – | Reserved for future use: No internal connection is present; Leave it floating externally. |

Note: 1. V_{SS} and V_{SSQ} are connected internally.

8GB, 16GB, 32GB, 64GB, 128GB: eMMC (Automotive) 100-Ball Signal Assignments

100-Ball Signal Assignments

Figure 2: 100 Ball (Top View, Ball Down)

- Notes:
1. Connect a 1 μ F decoupling capacitor from V_{DDIM} to ground.
 2. Some previous versions of the JEDEC product or mechanical specification had defined reserved for future use (RFU) balls as no connect (NC) balls. NC balls assigned in the previous specifications could have been connected to ground on the system board. To enable new feature introduction, some of these balls are assigned as RFU in the v4.4 mechanical specification. Any new PCB footprint implementations should use the new ball assignments and leave the RFU balls floating on the system board.
 3. V_{CC}, V_{CCQ}, V_{SS}, and V_{SSQ} balls must all be connected on the system board.

8GB, 16GB, 32GB, 64GB, 128GB: e.MMC (Automotive) 153-Ball Signal Assignments

153-Ball Signal Assignments

Figure 3: 153 Ball (Top View, Ball Down)

- Notes:
1. Some previous versions of the JEDEC product or mechanical specification had defined reserved for future use (RFU) balls as no connect (NC) balls. NC balls assigned in the previous specifications could have been connected to ground on the system board. To enable new feature introduction, some of these balls are assigned as RFU in the v4.4 mechanical specification. Any new PCB footprint implementations should use the new ball assignments and leave the RFU balls floating on the system board.
 2. VCC, VCCQ, VSS, and VSSQ balls must all be connected on the system board.

Note: 1. Dimensions are in millimeters.

Architecture

Figure 7: e.MMC Functional Block Diagram

Note: 1. V_{SS} and V_{SSQ} are internally connected.

MMC Protocol Independent of NAND Flash Technology

The MMC specification defines the communication protocol between a host and a device. The protocol is independent of the NAND flash features included in the device. The device has an intelligent onboard controller that manages the MMC communication protocol.

The controller also handles block management functions such as logical block allocation and wear leveling. These management functions require complex algorithms and depend entirely on NAND flash technology (generation or memory cell type). The device handles these management functions internally, making them invisible to the host processor.

Defect and Error Management

Micron e.MMC incorporates advanced technology for defect and error management. If a defective block is identified, the device completely replaces it with a spare block. This process is invisible to the host and does not affect user-allocated data space.

The device also includes a built-in error correction code (ECC) algorithm to ensure data integrity is maintained. To best implement these advanced technologies and ensure proper data loading and storage over the life of the device, the host must follow these precautions:

- Check the status after WRITE, READ, and ERASE operations.
- Avoid power-down during WRITE and ERASE operations.

As best practice, Micron recommends the usage of Power Off Notification (PON) and re-fresh mechanism.

8GB, 16GB, 32GB, 64GB, 128GB: eMMC (Automotive) OCR Register

OCR Register

The 32-bit operation conditions register (OCR) stores the voltage profile of the card and the access mode indication. In addition, this register includes a status information bit.

Table 7: OCR Parameters

| OCR Bits | OCR Value | Description |
|----------|-----------------------------------|----------------------------|
| [31] | 1b (ready)/0b (busy) ¹ | Device power-on status bit |
| [30:29] | 10b | Sector mode |
| [28:24] | 0 0000b | Reserved |
| [23:15] | 1 1111 1111b | 2.7–3.6V voltage range |
| [14:8] | 000 0000b | 2.0–2.7V voltage range |
| [7] | 1b | 1.70–1.95V voltage range |
| [6:0] | 000 0000b | Reserved |

Note: 1. OCR = C0FF8080h after the device has completed power-up.

8GB, 16GB, 32GB, 64GB, 128GB: eMMC (Automotive) CID Register

CID Register

The card identification (CID) register is 128 bits wide. It contains the device identification information used during the card identification phase as required by eMMC protocol. Each device is created with a unique identification number.

Table 8: CID Register Field Parameters

| Name | Field | Width | CID Bits | CID Value |
|-----------------------|-------|-------|-----------|----------------------------------|
| Manufacturer ID | MID | 8 | [127:120] | 13h |
| Reserved | – | 6 | [119:114] | – |
| Card/BGA | CBX | 2 | [113:112] | 01h |
| OEM/application ID | OID | 8 | [111:104] | – |
| Product name | PNM | 48 | [103:56] | 8GB: 53304A333541h (S0J35A) |
| | | | | 16GB: 53304A353658h (S0J56X) |
| | | | | 32GB: 53304A353758h (S0J57X) |
| | | | | 64GB: 53304a353858h (S0J58X) |
| | | | | 128GB: 53304a353958h (S0J59X) |
| Product revision | PRV | 8 | [55:48] | – |
| Product serial number | PSN | 32 | [47:16] | – |
| Manufacturing date | MDT | 8 | [15:8] | – |

| Not used; always 1 | – | 1 | [0] | – |

8GB, 16GB, 32GB, 64GB, 128GB: eMMC (Automotive) CSD Register

CSD Register

The card-specific data (CSD) register provides information about accessing the device contents. The CSD register defines the data format, error correction type, maximum data access time, and data transfer speed, as well as whether the DS register can be used. The programmable part of the register (entries marked with W or E in the following table) can be changed by the PROGRAM_CSD (CMD27) command.

Table 9: CSD Register Field Parameters

| Name | Field | Density | Size (Bits) | Cell Type ¹ | CSD Bits | CSD Value |
|--|--------------------|---------|-------------|------------------------|-----------|-----------|
| CSD structure | CSD_STRUCTURE | – | 2 | R | [127:126] | 3h |

| ECC | ECC | – | 2 | R/W/E | [9:8] | 0h |
| CRC | CRC | – | 7 | R/W/E | [7:1] | – |
| Not used, always 1 | – | – | 1 | – | [0] | – |

- Notes:
1. R = Read-only;
R/W = One-time programmable and readable;
R/W/E = Multiple writable with value kept after a power cycle, assertion of the RST_n signal, and any CMD0 reset, and readable
 2. Reserved bits should be read as 0.

8GB, 16GB, 32GB, 64GB, 128GB: e.MMC (Automotive) ECSD Register

ECSD Register

The 512-byte extended card-specific data (ECSD) register defines device properties and selected modes. The most significant 320 bytes are the properties segment. This segment defines device capabilities and cannot be modified by the host. The lower 192 bytes are the modes segment. The modes segment defines the configuration in which the device is working. The host can change the properties of modes segments using the SWITCH command.

Table 10: ECSD Register Field Parameters

| Name | Field | Density | Size (Bytes) | Cell Type ¹ | ECSD Bytes | ECSD Value |
|---------------------------------------|------------------------|---------|--------------|------------------------|------------|------------|
| Properties Segment | | | | | | |

8GB, 16GB, 32GB, 64GB, 128GB: e.MMC (Automotive) ECSD Register

Table 10: ECSD Register Field Parameters (Continued)

| Name | Field | Density | Size (Bytes) | Cell Type ¹ | ECSD Bytes | ECSD Value |
|----------|-------|---------|--------------|------------------------|------------|------------|
| Reserved | – | – | 15 | TBD | [14:0] | – |

- Notes:
1. R = Read-only;
R/W = One-time programmable and readable;
R/W/E = Multiple writable with the value kept after a power cycle, assertion of the RST_n signal, and any CMD0 reset, and readable;
R/W/C_P = Writable after the value is cleared by a power cycle and assertion of the RST_n signal (the value not cleared by CMD0 reset) and readable;
R/W/E_P = Multiple writable with the value reset after a power cycle, assertion of the RST_n signal, and any CMD0 reset, and readable;
W/E_P = Multiple writable with the value reset after power cycle, assertion of the RST_n signal, and any CMD0 reset, and not readable
 2. Reserved bits should be read as 0.
 3. Boot partition size is configurable by host. Refer to local Micron support for information.
 4. Micron has tested power failure under best-application knowledge conditions with positive results. Customers may request a dedicated test for their specific application condition. Micron set this register during factory test and used the one-time programming option.

8GB, 16GB, 32GB, 64GB, 128GB: eMMC (Automotive) DC Electrical Specifications – Device Power

DC Electrical Specifications – Device Power

The device current consumption for various device configurations is defined in the power class fields of the ECSD register.

V_{CC} is used for the NAND Flash device and its interface voltage; V_{CCQ} is used for the controller and the eMMC interface voltage.

Figure 8: Device Power Diagram

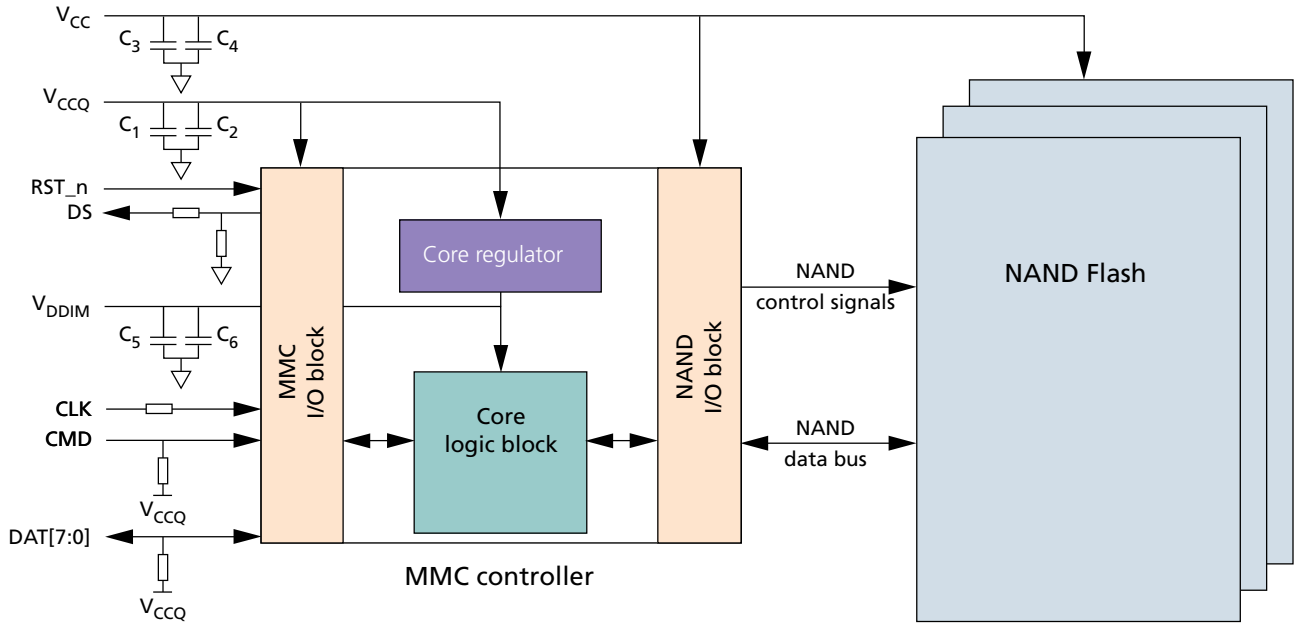

Table 11: Absolute Maximum Ratings

| Parameters | Symbol | Min | Max | Unit |
|------------------|-----------|------|-----|------|
| Voltage input | V_{IN} | -0.6 | 4.6 | V |
| V_{CC} supply | V_{CC} | -0.6 | 4.6 | V |
| V_{CCQ} supply | V_{CCQ} | -0.6 | 4.6 | V |

Note: 1. Voltage on any pin relative to V_{SS} .

Table 12: Temperature Grade

| Temperature Grade | Condition | Ambient Temperature - T_a | Max T_{case} | Unit |
|-------------------|-----------|-----------------------------|----------------|------|
| AIT | Operating | -40 to 85 | 95 | °C |
| | Storage | | | |
| AAT | Operating | -40 to 105 | 115 | °C |
| | Storage | | | |

8GB, 16GB, 32GB, 64GB, 128GB: e.MMC (Automotive) Product features

Table 13: Capacitor and Resistance Specifications

| Parameter | Symbol | Min | Max | Typ | Units | Notes |
|---|---------|-----|------|-----|-------|-------|
| Pull-up resistance: CMD | R_CMD | 4.7 | 50 | 10 | kΩ | 1 |
| Pull-up resistance: DAT[7:0] | R_DAT | 10 | 50 | 50 | kΩ | 1 |
| Pull-up resistance: RST_n | R_RST_n | 4.7 | 50 | 50 | kΩ | 2 |
| CLK/CMD/DS/DAT[7:0] impedance | | 45 | 55 | 50 | Ω | 3 |
| Serial resistance on CLK | SR_CLK | 0 | 47 | 22 | Ω | |
| Serial resistance on DS | SR_DS | 0 | 47 | 22 | Ω | 4 |
| Pull-down resistance: DS | R_DS | 10 | 100 | – | kΩ | |
| V _{CCQ} capacitor | C1 | 2.2 | 4.7 | 2.2 | μF | 5 |
| | C2 | 0.1 | 0.22 | 0.1 | | |
| V _{CC} capacitor | C3 | 2.2 | 4.7 | 2.2 | μF | 6 |
| | C4 | 0.1 | 0.22 | 0.1 | | |
| V _{DDIM} capacitor (C _{reg}) | C5 | 1 | 4.7 | 1 | μF | 7 |
| | C6 | 0.1 | 0.1 | 0.1 | | |

- Notes:
1. Used to prevent bus floating.
 2. If host does not use H/W RESET (RST_n), pull-up resistance is not needed on RST_n line (Extended_CSD[162] = 00h).
 3. Impedance match.
 4. Recommended in order to compensate eventual impedance mismatch on the PCB.
 5. The coupling capacitor should be connected with V_{CCQ} and V_{SSQ} as closely as possible.
 6. The coupling capacitor should be connected with V_{CC} and V_{SS} as closely as possible.
 7. The coupling capacitor should be connected with V_{DDIM} and V_{SS} as closely as possible.

Product features

The list below shows the JEDEC features not supported. See the full JEDEC/MMC Standard No. 84-B51 available at www.jedec.org/sites/default/files/docs/JESD84-B51.pdf

- Packed CMDs
- Context ID/Data tag (this feature is implemented at the protocol level)
- Dynamic device capacity
- Thermal spec
- Large sector size - 4KB (<256GB)
- Large sector size - 4KB (≥256GB)
- Extended security protocol
- Secure erase/secure trim*
- Forced erase*

* The feature implements as logical erase mode: It moves the mapped host address range to the unmapped host address range. When the operation is complete, the data still exists, but the mapped device address range behaves as if overwritten with all 0s.

Revision History

Rev. I – 11/2020

- Updated Temperature Grade table in DC Electrical Specifications – Device Power

Rev. H – 02/2020

- Added Retention AEC-Q100-005 compliance and automotive grade documents

Rev. G – 10/2018

- Updated Part Numbers status

Rev. F – 08/2018

- Removed Preliminary header and updated Part Numbers status
- Updated current consumption tables
