

More Information

Cypress provides a wealth of data at www.cypress.com to help you to select the right PSoC device for your design, and to help you to quickly and effectively integrate the device into your design. For a comprehensive list of resources, see the knowledge base article, [How to Design with PSoC® 1, PowerPSoC®, and PLC – KBA88292](#). Following is an abbreviated list for PSoC 1:

- Overview: PSoC Portfolio, PSoC Roadmap
- Product Selectors: [PSoC 1](#), [PSoC 3](#), [PSoC 4](#), [PSoC 5LP](#)
- In addition, PSoC Designer includes a device selection tool.
- Application notes: Cypress offers a large number of PSoC application notes covering a broad range of topics, from basic to advanced level. Recommended application notes for getting started with PSoC 1 are:
 - [Getting Started with PSoC® 1 – AN75320](#)
 - [PSoC® 1 - Getting Started with GPIO – AN2094](#)
 - [PSoC® 1 Analog Structure and Configuration – AN74170](#)
 - [PSoC® 1 Switched Capacitor Analog Blocks – AN2041](#)
 - [Selecting Analog Ground and Reference – AN2219](#)

Note: For CY8C21x34B devices related Application note please click [here](#).

- Development Kits:
 - [CY3210-PSoCEval1](#) supports all PSoC 1 Mixed-Signal Array families, including automotive, except CY8C25/26xxx devices. The kit includes an LCD module, potentiometer, LEDs, and breadboarding space.
 - [CY3214-PSoCEvalUSB](#) features a development board for the CY8C24x94 PSoC device. Special features of the board include USB and CapSense development and debugging support.

Note: For CY8C21x34B devices related Development Kits please click [here](#).

The [MiniProg1](#) and [MiniProg3](#) devices provide interfaces for flash programming and debug.

PSoC Designer

[PSoC Designer](#) is a free Windows-based Integrated Design Environment (IDE). Develop your applications using a library of pre-characterized analog and digital peripherals in a drag-and-drop design environment. Then, customize your design leveraging the dynamically generated API libraries of code. [Figure 1](#) shows PSoC Designer windows. **Note:** This is not the default view.

1. **Global Resources** – all device hardware settings.
2. **Parameters** – the parameters of the currently selected User Modules.
3. **Pinout** – information related to device pins.
4. **Chip-Level Editor** – a diagram of the resources available on the selected chip.
5. **Datasheet** – the datasheet for the currently selected UM
6. **User Modules** – all available User Modules for the selected device.
7. **Device Resource Meter** – device resource usage for the current project configuration.
8. **Workspace** – a tree level diagram of files associated with the project.
9. **Output** – output from project build and debug operations.

Note: For detailed information on PSoC Designer, go to **PSoC® Designer > Help > Documentation > Designer Specific Documents > IDE User Guide**.

PSoC Functional Overview

The PSoC family consists of many devices with on-chip controllers. These devices are designed to replace multiple traditional MCU-based system components with one low-cost single-chip programmable component. A PSoC device includes configurable blocks of analog and digital logic, and programmable interconnect. This architecture makes it possible for you to create customized peripheral configurations, to match the requirements of each individual application. Additionally, a fast central processing unit (CPU), flash program memory, SRAM data memory, and configurable I/O are included in a range of convenient pinouts.

The PSoC architecture, shown in Figure 2, consists of four main areas: the core, the system resources, the digital system, and the analog system. Configurable global bus resources allow combining all of the device resources into a complete custom system. Each CY8C21x34 PSoC device includes four digital blocks and four analog blocks. Depending on the PSoC package, up to 28 GPIOs are also included. The GPIOs provide access to the global digital and analog interconnects.

The PSoC Core

The PSoC core is a powerful engine that supports a rich instruction set. It encompasses SRAM for data storage, an interrupt controller, sleep and watchdog timers, and internal main oscillator (IMO) and internal low speed oscillator (ILO). The CPU core, called the M8C, is a powerful processor with speeds up to 24 MHz [3]. The M8C is a four-million instructions per second (MIPS) 8-bit Harvard-architecture microprocessor.

System resources provide these additional capabilities:

- Digital clocks for increased flexibility
- I²C [4] functionality to implement an I²C master and slave
- An internal voltage reference, multi-master, that provides an absolute value of 1.3 V to a number of PSoC subsystems
- A SMP that generates normal operating voltages from a single battery cell
- Various system resets supported by the M8C

The digital system consists of an array of digital PSoC blocks that may be configured into any number of digital peripherals. The digital blocks are connected to the GPIOs through a series of global buses. These buses can route any signal to any pin, freeing designs from the constraints of a fixed peripheral controller.

The analog system consists of four analog PSoC blocks, supporting comparators, and analog-to-digital conversion up to 10 bits of precision.

The Digital System

The digital system consists of four digital PSoC blocks. Each block is an 8-bit resource that is used alone or combined with other blocks to form 8-, 16-, 24-, and 32-bit peripherals, which are called user modules. Digital peripheral configurations include:

- PWMs (8- to 32-bit)
- PWMs with dead band (8- to 32-bit)
- Counters (8- to 32-bit)
- Timers (8- to 32-bit)
- UART 8- with selectable parity
- Serial peripheral interface (SPI) master and slave
- I²C slave and multi-master [4]
- CRC/generator (8-bit)
- IrDA
- PRS generators (8-bit to 32-bit)

The digital blocks are connected to any GPIO through a series of global buses that can route any signal to any pin. The buses also allow for signal multiplexing and for performing logic operations. This configurability frees your designs from the constraints of a fixed peripheral controller.

Digital blocks are provided in rows of four, where the number of blocks varies by PSoC device family. This allows the optimum choice of system resources for your application. Family resources are shown in Table 1 on page 6.

Figure 2. Digital System Block Diagram

Notes

3. **Errata:** The worst case IMO frequency deviation when operated below 0 °C and above +70 °C and within the upper and lower datasheet temperature range is ±5%.
4. **Errata:** The I²C block exhibits occasional data and bus corruption errors when the I²C master initiates transactions while the device is transitioning in to or out of sleep mode.

The Analog System

The analog system consists of four configurable blocks that allow for the creation of complex analog signal flows. Analog peripherals are very flexible and can be customized to support specific application requirements. Some of the common PSoC analog functions for this device (most available as user modules) are:

- ADCs (single or dual, with 8-bit or 10-bit resolution)
- Pin-to-pin comparator
- Single-ended comparators (up to two) with absolute (1.3 V) reference or 8-bit DAC reference
- 1.3-V reference (as a system resource)

In most PSoC devices, analog blocks are provided in columns of three, which includes one continuous time (CT) and two switched capacitor (SC) blocks. The CY8C21x34 devices provide limited functionality Type E analog blocks. Each column contains one CT Type E block and one SC Type E block. Refer to the [PSoC Technical Reference Manual](#) for detailed information on the CY8C21x34's Type E analog blocks.

Figure 3. Analog System Block Diagram

The Analog Multiplexer System

The analog mux bus can connect to every GPIO pin. Pins may be connected to the bus individually or in any combination. The bus also connects to the analog system for analysis with comparators and analog-to-digital converters. An additional 8:1 analog input multiplexer provides a second path to bring Port 0 pins to the analog array.

Switch-control logic enables selected pins to precharge continuously under hardware control. This enables capacitive measurement for applications such as touch sensing. Other multiplexer applications include:

- Track pad, finger sensing
- Chip-wide mux that allows analog input from any I/O pin
- Crosspoint connection between any I/O pin combinations

Additional System Resources

System resources, some of which are listed in the previous sections, provide additional capability useful to complete systems. Additional resources include a switch-mode pump, low-voltage detection, and power-on-reset (POR).

- Digital clock dividers provide three customizable clock frequencies for use in applications. The clocks may be routed to both the digital and analog systems. Additional clocks can be generated using digital PSoC blocks as clock dividers.
- The I²C [5] module provides 100- and 400-kHz communication over two wires. Slave, master, and multi-master modes are all supported.
- LVD interrupts can signal the application of falling voltage levels, while the advanced POR circuit eliminates the need for a system supervisor.
- An internal 1.3-V reference provides an absolute reference for the analog system, including ADCs and DACs.
- An integrated switch-mode pump generates normal operating voltages from a single 1.2-V battery cell, providing a low cost boost converter.
- Versatile analog multiplexer system.

Note

5. **Errata:** The I²C block exhibits occasional data and bus corruption errors when the I2C master initiates transactions while the device is transitioning in to or out of sleep mode.

PSoC Device Characteristics

Depending on your PSoC device characteristics, the digital and analog systems can have 16, 8, or 4 digital blocks and 12, 6, or 4 analog blocks. [Table 1](#) lists the resources available for specific PSoC device groups. The PSoC device covered by this datasheet is highlighted in [Table 1](#).

Table 1. PSoC Device Characteristics

PSoC Part Number	Digital I/O	Digital Rows	Digital Blocks	Analog Inputs	Analog Outputs	Analog Columns	Analog Blocks	SRAM Size	Flash Size
CY8C29x66	up to 64	4	16	up to 12	4	4	12	2K	32K

Getting Started

For in-depth information, along with detailed programming details, see the *PSoC® Technical Reference Manual*.

For up-to-date ordering, packaging, and electrical specification information, see the latest [PSoC device datasheets](#) on the web.

Application Notes

[Cypress application notes](#) are an excellent introduction to the wide variety of possible PSoC designs.

Development Kits

[PSoC Development Kits](#) are available online from and through a growing number of regional and global distributors, which include Arrow, Avnet, Digi-Key, Farnell, Future Electronics, and Newark.

Training

[Free PSoC technical training](#) (on demand, webinars, and workshops), which is available online via www.cypress.com,

covers a wide variety of topics and skill levels to assist you in your designs.

CYPros Consultants

Certified PSoC consultants offer everything from technical assistance to completed PSoC designs. To contact or become a PSoC consultant go to the [CYPros Consultants](#) web site.

Solutions Library

Visit our growing [library of solution focused designs](#). Here you can find various application designs that include firmware and hardware design files that enable you to complete your designs quickly.

Technical Support

[Technical support](#) – including a searchable Knowledge Base articles and technical forums – is also available online. If you cannot find an answer to your question, call our Technical Support hotline at 1-800-541-4736.

Notes

6. Limited analog functionality.

7. Two analog blocks and one CapSense®.

Development Tools

PSoC Designer™ is the revolutionary integrated design environment (IDE) that you can use to customize PSoC to meet your specific application requirements. PSoC Designer software accelerates system design and time to market. Develop your applications using a library of precharacterized analog and digital peripherals (called user modules) in a drag-and-drop design environment. Then, customize your design by leveraging the dynamically generated application programming interface (API) libraries of code. Finally, debug and test your designs with the integrated debug environment, including in-circuit emulation and standard software debug features. PSoC Designer includes:

- Application editor graphical user interface (GUI) for device and user module configuration and dynamic reconfiguration
- Extensive user module catalog
- Integrated source-code editor (C and assembly)
- Free C compiler with no size restrictions or time limits
- Built-in debugger
- In-circuit emulation
- Built-in support for communication interfaces:
 - Hardware and software I²C [8] slaves and masters
 - Full-speed USB 2.0
 - Up to four full-duplex universal asynchronous receiver/transmitters (UARTs), SPI master and slave, and wireless

PSoC Designer supports the entire library of PSoC 1 devices and runs on Windows XP, Windows Vista, and Windows 7.

PSoC Designer Software Subsystems

Design Entry

In the chip-level view, choose a base device to work with. Then select different onboard analog and digital components that use the PSoC blocks, which are called user modules. Examples of user modules are ADCs, DACs, amplifiers, and filters. Configure the user modules for your chosen application and connect them to each other and to the proper pins. Then generate your project. This prepopulates your project with APIs and libraries that you can use to program your application.

The tool also supports easy development of multiple configurations and dynamic reconfiguration. Dynamic reconfiguration makes it possible to change configurations at run time. In essence, this allows you to use more than 100 percent of PSoC's resources for an application.

Code Generation Tools

The code generation tools work seamlessly within the PSoC Designer interface and have been tested with a full range of debugging tools. You can develop your design in C, assembly, or a combination of the two.

Assemblers. The assemblers allow you to merge assembly code seamlessly with C code. Link libraries automatically use absolute addressing or are compiled in relative mode, and are linked with other software modules to get absolute addressing.

C Language Compilers. C language compilers are available that support the PSoC family of devices. The products allow you to create complete C programs for the PSoC family devices. The optimizing C compilers provide all of the features of C, tailored to the PSoC architecture. They come complete with embedded libraries providing port and bus operations, standard keypad and display support, and extended math functionality.

Debugger

PSoC Designer has a debug environment that provides hardware in-circuit emulation, allowing you to test the program in a physical system while providing an internal view of the PSoC device. Debugger commands allow you to read and program and read and write data memory, and read and write I/O registers. You can read and write CPU registers, set and clear breakpoints, and provide program run, halt, and step control. The debugger also allows you to create a trace buffer of registers and memory locations of interest.

Online Help System

The online help system displays online, context-sensitive help. Designed for procedural and quick reference, each functional subsystem has its own context-sensitive help. This system also provides tutorials and links to FAQs and an online support Forum to aid the designer.

In-Circuit Emulator

A low-cost, high-functionality in-circuit emulator (ICE) is available for development support. This hardware can program single devices.

The emulator consists of a base unit that connects to the PC using a USB port. The base unit is universal and operates with all PSoC devices. Emulation pods for each device family are available separately. The emulation pod takes the place of the PSoC device in the target board and performs full-speed (24 MHz) operation.

Note

8. **Errata:** The I²C block exhibits occasional data and bus corruption errors when the I²C master initiates transactions while the device is transitioning in to or out of sleep mode.

Designing with PSoC Designer

The development process for the PSoC device differs from that of a traditional fixed function microprocessor. The configurable analog and digital hardware blocks give the PSoC architecture a unique flexibility that pays dividends in managing specification change during development and by lowering inventory costs. These configurable resources, called PSoC Blocks, have the ability to implement a wide variety of user-selectable functions. The PSoC development process is summarized in four steps:

1. Select [User Modules](#).
2. Configure User Modules.
3. Organize and Connect.
4. Generate, Verify, and Debug.

Select User Modules

PSoC Designer provides a library of prebuilt, pretested hardware peripheral components called “user modules.” User modules make selecting and implementing peripheral devices, both analog and digital, simple.

Configure User Modules

Each user module that you select establishes the basic register settings that implement the selected function. They also provide parameters and properties that allow you to tailor their precise configuration to your particular application. For example, a PWM User Module configures one or more digital PSoC blocks, one for each 8 bits of resolution. The user module parameters permit you to establish the pulse width and duty cycle. Configure the parameters and properties to correspond to your chosen application. Enter values directly or by selecting values from drop-down menus. All the user modules are documented in datasheets that may be viewed directly in PSoC Designer or on the Cypress website. These [user module datasheets](#) explain the internal operation of the user module and provide performance

specifications. Each datasheet describes the use of each user module parameter, and other information you may need to successfully implement your design.

Organize and Connect

You build signal chains at the chip level by interconnecting user modules to each other and the I/O pins. You perform the selection, configuration, and routing so that you have complete control over all on-chip resources.

Generate, Verify, and Debug

When you are ready to test the hardware configuration or move on to developing code for the project, you perform the “Generate Configuration Files” step. This causes PSoC Designer to generate source code that automatically configures the device to your specification and provides the software for the system. The generated code provides application programming interfaces (APIs) with high-level functions to control and respond to hardware events at run-time and interrupt service routines that you can adapt as needed.

A complete code development environment allows you to develop and customize your applications in either C, assembly language, or both.

The last step in the development process takes place inside PSoC Designer’s debugger (access by clicking the Connect icon). PSoC Designer downloads the HEX image to the ICE where it runs at full speed. PSoC Designer debugging capabilities rival those of systems costing many times more. In addition to traditional single-step, run-to-breakpoint, and watch-variable features, the debug interface provides a large trace buffer and allows you to define complex breakpoint events. These include monitoring address and data bus values, memory locations, and external signals.

Pin Information

The CY8C21x34 PSoC device is available in a variety of packages which are listed in the following tables. Every port pin (labeled with a "P") is capable of Digital I/O and connection to the common analog bus. However, V_{SS} , V_{DD} , SMP, and XRES are not capable of Digital I/O.

16-pin Part Pinout

Figure 4. CY8C21234 16-pin PSoC Device

CY8C21234 16-pin SOIC Pin Definitions

Pin No.	Type		Name	Description
	Digital	Analog		
1	I/O	I, M	P0[7]	Analog column mux input
2	I/O	I, M	P0[5]	Analog column mux input
3	I/O	I, M	P0[3]	Analog column mux input, integrating input

LEGEND A = Analog, I = Input, O = Output, and M = Analog Mux Input.

Notes

15. The center pad on the QFN package must be connected to ground (V_{SS}) for best mechanical, thermal, and electrical performance. If not connected to ground, it must be electrically floated and not connected to any other signal.
16. All V_{SS} pins should be brought out to one common GND plane.
17. These are the ISSP pins, which are not high Z at POR. See the [PSoC Technical Reference Manual](#) for details.

56-pin Part Pinout

The 56-pin SSOP part is for the CY8C21001 on-chip debug (OCD) PSoC device.

Note This part is only used for in-circuit debugging. It is NOT available for production.

Notes

18. All V_{SS} pins should be brought out to one common GND plane.

19. These are the ISSP pins, which are not High Z at POR. See the [PSoC Technical Reference Manual](#) for details.

Register Reference

This chapter lists the registers of the CY8C21x34 PSoC device. For detailed register information, see the [PSoC Technical Reference Manual](#).

Register Conventions

The register conventions specific to this section are listed in [Table 2](#).

Table 2. Register Conventions

Convention	Description
R	Read register or bit(s)
W	Write register or bit(s)
L	Logical register or bit(s)
C	Clearable register or bit(s)
#	Access is bit specific

Register Mapping Tables

The PSoC device has a total register address space of 512 bytes. The register space is referred to as I/O space and is divided into two banks, Bank 0 and Bank 1. The XO1 bit in the Flag register (CPU_F) determines which bank the user is currently in. When the XO1 bit is set to 1, the user is in Bank 1.

Note In the following register mapping tables, blank fields are reserved and must not be accessed.

Table 3. Register Map 0 Table: User Space

Absolute Maximum Ratings

Symbol	Description	Min	Typ	Max	Units	Notes
T _{STG}	Storage temperature	–55	25	+100	°C	Higher storage temperatures reduce data retention time. Recommended storage temperature is +25 °C ± 25 °C. Extended duration storage temperatures above 65 °C degrade reliability.
T _{BAKETEMP}	Bake temperature	–	125	See package label	°C	
t _{BAKETIME}	Bake time	See package label	–	72	Hours	
T _A	Ambient temperature with power applied	–40	–	+85	°C	
V _{DD}	Supply voltage on V _{DD} relative to V _{SS}	–0.5	–	+6.0	V	
V _{IO}	DC input voltage	V _{SS} – 0.5	–	V _{DD} + 0.5	V	
V _{IOZ}	DC voltage applied to tri-state	V _{SS} – 0.5	–	V _{DD} + 0.5	V	
I _{MIO}	Maximum current into any port pin	–25	–	+50	mA	
ESD	Electrostatic discharge voltage	2000	–	–	V	Human body model ESD.
LU	Latch-up current	–	–	200	mA	

Operating Temperature

Symbol	Description	Min	Typ	Max	Units	Notes
T _A	Ambient temperature	–40	–	+85	°C	
T _J	Junction temperature	–40	–	+100	°C	The temperature rise from ambient to junction is package specific. See Table 29 on page 39 . You must limit the power consumption to comply with this requirement.

Electrical Specifications

This section presents the DC and AC electrical specifications of the CY8C21x34 PSoC device. For up-to-date electrical specifications, visit the Cypress web site at <http://www.cypress.com>.

Specifications are valid for $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$ and $T_J \leq 100^{\circ}\text{C}$ as specified, except where noted.

Refer to [Table 16 on page 27](#) for the electrical specifications for the IMO using SLIMO mode.

Figure 11. Voltage versus CPU Frequency

Figure 12. IMO Frequency Trim Options

DC Electrical Characteristics

DC Chip-Level Specifications

[Table 5](#) lists the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, 3.0 V to 3.6 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, or 2.4 V to 3.0 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25°C and are for design guidance only.

Table 5. DC Chip-level Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
V_{DD}	Supply voltage	2.40	—	5.25	V	See Table 13 on page 25
I_{DD}	Supply current, IMO = 24 MHz	—	3	4	mA	Conditions are $V_{DD} = 5.0\text{ V}$, $T_A = 25^{\circ}\text{C}$, CPU = 3 MHz, 48 MHz disabled. VC1 = 1.5 MHz, VC2 = 93.75 kHz, VC3 = 0.366 kHz
I_{DD3}	Supply current, IMO = 6 MHz using SLIMO mode.	—	1.2	2	mA	Conditions are $V_{DD} = 3.3\text{ V}$, $T_A = 25^{\circ}\text{C}$, CPU = 3 MHz, clock doubler disabled. VC1 = 375 kHz, VC2 = 23.4 kHz, VC3 = 0.091 kHz
I_{DD27}	Supply current, IMO = 6 MHz using SLIMO mode.	—	1.1	1.5	mA	Conditions are $V_{DD} = 2.55\text{ V}$, $T_A = 25^{\circ}\text{C}$, CPU = 3 MHz, clock doubler disabled. VC1 = 375 kHz, VC2 = 23.4 kHz, VC3 = 0.091 kHz
I_{SB27}	Sleep (mode) current with POR, LVD, sleep timer, WDT, and internal slow oscillator active. Mid temperature range.	—	2.6	4	μA	$V_{DD} = 2.55\text{ V}$, $0^{\circ}\text{C} \leq T_A \leq 40^{\circ}\text{C}$
I_{SB}	Sleep (mode) current with POR, LVD, Sleep Timer, WDT, and internal slow oscillator active.	—	2.8	5	μA	$V_{DD} = 3.3\text{ V}$, $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$
V_{REF}	Reference voltage (Bandgap)	1.28	1.30	1.32	V	Trimmed for appropriate V_{DD} $V_{DD} = 3.0\text{ V to } 5.25\text{ V}$
V_{REF27}	Reference voltage (Bandgap)	1.16	1.30	1.33	V	Trimmed for appropriate V_{DD} $V_{DD} = 2.4\text{ V to } 3.0\text{ V}$
AGND	Analog ground	$V_{REF} - 0.003$	V_{REF}	$V_{REF} + 0.003$	V	

DC General-Purpose I/O Specifications

The following tables list the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, 3.0 V to 3.6 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, or 2.4 V to 3.0 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, respectively. Typical parameters are measured at 5 V, 3.3 V, and 2.7 V at 25°C and are for design guidance only.

Table 6. 5-V and 3.3-V DC GPIO Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
R _{PU}	Pull-up resistor	4	5.6	8	k Ω	
R _{PD}	Pull-down resistor	4	5.6	8	k Ω	
V _{OH}	High output level	V _{DD} – 1.0	–	–	V	I _{OH} = 10 mA, V _{DD} = 4.75 to 5.25 V (8 total loads, 4 on even port pins (for example, P0[2], P1[4]), 4 on odd port pins (for example, P0[3], P1[5]))
V _{OL}	Low output level	–	–	0.75	V	I _{OL} = 25 mA, V _{DD} = 4.75 to 5.25 V (8 total loads, 4 on even port pins (for example, P0[2], P1[4]), 4 on odd port pins (for example, P0[3], P1[5]))
I _{OH}	High level source current	10	–	–	mA	V _{OH} = V _{DD} – 1.0 V, see the limitations of the total current in the note for V _{OH}
I _{OL}	Low level sink current	25	–	–	mA	V _{OL} = 0.75 V, see the limitations of the total current in the note for V _{OL}
V _{IL}	Input low level	–	–	0.8	V	V _{DD} = 3.0 to 5.25
V _{IH}	Input high level	2.1	–	–	V	V _{DD} = 3.0 to 5.25
V _H	Input hysteresis	–	60	–	mV	
I _{IL}	Input leakage (absolute value)	–	1	–	nA	Gross tested to 1 μ A
C _{IN}	Capacitive load on pins as input	–	3.5	10	pF	Package and pin dependent Temp = 25°C
C _{OUT}	Capacitive load on pins as output	–	3.5	10	pF	Package and pin dependent Temp = 25°C

Table 7. 2.7-V DC GPIO Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
R _{PU}	Pull-up resistor	4	5.6	8	k Ω	
R _{PD}	Pull-down resistor	4	5.6	8	k Ω	
V _{OH}	High output level	V _{DD} – 0.4	–	–	V	I _{OH} = 2.5 mA (6.25 Typ), V _{DD} = 2.4 to 3.0 V (16 mA maximum, 50 mA Typ combined I _{OH} budget)
V _{OL}	Low output level	–	–	0.75	V	I _{OL} = 10 mA, V _{DD} = 2.4 to 3.0 V (90 mA maximum combined I _{OL} budget)
I _{OH}	High level source current	2.5	–	–	mA	V _{OH} = V _{DD} – 0.4 V, see the limitations of the total current in the note for V _{OH}
I _{OL}	Low level sink current	10	–	–	mA	V _{OL} = 0.75 V, see the limitations of the total current in the note for V _{OL}
V _{IL}	Input low level	–	–	0.75	V	V _{DD} = 2.4 to 3.0
V _{IH}	Input high level	2.0	–	–	V	V _{DD} = 2.4 to 3.0
V _H	Input hysteresis	–	90	–	mV	
I _{IL}	Input leakage (absolute value)	–	1	–	nA	Gross tested to 1 μ A
C _{IN}	Capacitive load on pins as input	–	3.5	10	pF	Package and pin dependent Temp = 25°C
C _{OUT}	Capacitive load on pins as output	–	3.5	10	pF	Package and pin dependent Temp = 25°C

DC Operational Amplifier Specifications

The following tables list the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, 3.0 V to 3.6 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, or 2.4 V to 3.0 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25°C and are for design guidance only.

Table 8. 5-V DC Operational Amplifier Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
V_{OSOA}	Input offset voltage (absolute value)	–	2.5	15	mV	
TCV_{OSOA}	Average input offset voltage drift	–	10	–	$\mu\text{V}/^{\circ}\text{C}$	
I_{EBOA}	Input leakage current (Port 0 analog pins 7-to-1)	–	200	–	pA	Gross tested to 1 μA
I_{EBOA00}	Input leakage current (Port 0, Pin 0 analog pin)	–	50	–	nA	Gross tested to 1 μA
C_{INOA}	Input capacitance (Port 0 analog pins)	–	4.5	9.5	pF	Package and pin dependent. Temp = 25°C
V_{CMOA}	Common mode voltage range	0.0	–	$V_{\text{DD}} - 1.0$	V	
G_{OLOA}	Open loop gain	–	80	–	dB	
I_{SOA}	Amplifier supply current	–	10	30	μA	

Table 9. 3.3-V DC Operational Amplifier Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
V_{OSOA}	Input offset voltage (absolute value)	–	2.5	15	mV	
TCV_{OSOA}	Average input offset voltage drift	–	10	–	$\mu\text{V}/^{\circ}\text{C}$	
I_{EBOA}	Input leakage current (Port 0 analog pins)	–	200	–	pA	Gross tested to 1 μA
I_{EBOA00}	Input leakage current (Port 0, Pin 0 analog pin)	–	50	–	nA	Gross tested to 1 μA
C_{INOA}	Input capacitance (Port 0 analog pins)	–	4.5	9.5	pF	Package and pin dependent. Temp = 25°C
V_{CMOA}	Common mode voltage range	0	–	$V_{\text{DD}} - 1.0$	V	
G_{OLOA}	Open loop gain	–	80	–	dB	
I_{SOA}	Amplifier supply current	–	10	30	μA	

Table 10. 2.7-V DC Operational Amplifier Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
V_{OSOA}	Input offset voltage (absolute value)	–	2.5	15	mV	
TCV_{OSOA}	Average input offset voltage drift	–	10	–	$\mu\text{V}/^{\circ}\text{C}$	
I_{EBOA}	Input leakage current (Port 0 analog pins)	–	200	–	pA	Gross tested to 1 μA
I_{EBOA00}	Input leakage current (Port 0, Pin 0 analog pin)	–	50	–	nA	Gross tested to 1 μA
C_{INOA}	Input capacitance (Port 0 analog pins)	–	4.5	9.5	pF	Package and pin dependent. Temp = 25°C
V_{CMOA}	Common mode voltage range	0	–	$V_{\text{DD}} - 1.0$	V	
G_{OLOA}	Open loop gain	–	80	–	dB	
I_{SOA}	Amplifier supply current	–	10	30	μA	

DC Switch Mode Pump Specifications

Table 11 lists the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, 3.0 V to 3.6 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, or 2.4 V to 3.0 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25°C and are for design guidance only.

Figure 13. Basic Switch Mode Pump Circuit

Table 11. DC Switch Mode Pump (SMP) Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
V_{PUMP5V}	5 V output voltage from pump	4.75	5.0	5.25	V	Configured as in Note 20 Average, neglecting ripple SMP trip voltage is set to 5.0 V
V_{PUMP3V}	3.3 V output voltage from pump	3.00	3.25	3.60	V	Configured as in Note 20 Average, neglecting ripple. SMP trip voltage is set to 3.25 V
V_{PUMP2V}	2.6 V output voltage from pump	2.45	2.55	2.80	V	Configured as in Note 20 Average, neglecting ripple. SMP trip voltage is set to 2.55 V
I_{PUMP}	Available output current $V_{BAT} = 1.8\text{ V}, V_{PUMP} = 5.0\text{ V}$ $V_{BAT} = 1.5\text{ V}, V_{PUMP} = 3.25\text{ V}$ $V_{BAT} = 1.3\text{ V}, V_{PUMP} = 2.55\text{ V}$	5 8 8	— — —	— — —	mA mA mA	Configured as in Note 20 SMP trip voltage is set to 5.0 V SMP trip voltage is set to 3.25 V SMP trip voltage is set to 2.55 V
V_{BAT5V}	Input voltage range from battery	1.8	—	5.0	V	Configured as in Note 20 SMP trip voltage is set to 5.0 V
V_{BAT3V}	Input voltage range from battery	1.0	—	3.3	V	Configured as in Note 20 SMP trip voltage is set to 3.25 V
V_{BAT2V}	Input voltage range from battery	1.0	—	2.8	V	Configured as in Note 20 SMP trip voltage is set to 2.55 V
$V_{BATSTART}$	Minimum input voltage from battery to start pump	1.2	—	—	V	Configured as in Note 20 $0^{\circ}\text{C} \leq T_A \leq 100^{\circ}\text{C}$. 1.25 V at $T_A = -40^{\circ}\text{C}$
ΔV_{PUMP_Line}	Line regulation (over V_i range)	—	5	—	% V_O	Configured as in Note 20 V_O is the " V_{DD} Value for PUMP Trip" specified by the VM[2:0] setting in the DC POR and LVD Specification, Table 13 on page 25
ΔV_{PUMP_Load}	Load regulation	—	5	—	% V_O	Configured as in Note 20 V_O is the " V_{DD} Value for PUMP Trip" specified by the VM[2:0] setting in the DC POR and LVD Specification, Table 13 on page 25
ΔV_{PUMP_Ripple}	Output voltage ripple (depends on cap/load)	—	100	—	mVpp	Configured as in Note 20 Load is 5 mA

Note

20. $L_1 = 2\text{ mH}$ inductor, $C_1 = 10\text{ mF}$ capacitor, $D_1 =$ Schottky diode. See Figure 13 on page 24.

Table 11. DC Switch Mode Pump (SMP) Specifications (continued)

Symbol	Description	Min	Typ	Max	Units	Notes
E ₃	Efficiency	35	50	–	%	Configured as in Note 20 Load is 5 mA. SMP trip voltage is set to 3.25 V
E ₂	Efficiency	35	80	–	%	For I load = 1mA, V _{PUMP} = 2.55 V, V _{BAT} = 1.3 V, 10 μH inductor, 1 μF capacitor, and Schottky diode
F _{PUMP}	Switching frequency	–	1.3	–	MHz	
DC _{PUMP}	Switching duty cycle	–	50	–	%	

DC Analog Mux Bus Specifications

Table 12 lists the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and –40 °C ≤ T_A ≤ 85 °C, 3.0 V to 3.6 V and –40 °C ≤ T_A ≤ 85 °C, or 2.4 V to 3.0 V and –40 °C ≤ T_A ≤ 85 °C, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25 °C and are for design guidance only.

Table 12. DC Analog Mux Bus Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
R _{SW}	Switch resistance to common analog bus	–	–	400 800	Ω	V _{DD} ≥ 2.7 V 2.4 V ≤ V _{DD} ≤ 2.7 V
R _{VDD}	Resistance of initialization switch to V _{DD}	–	–	800	Ω	

DC POR and LVD Specifications

Table 13 lists the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and –40 °C ≤ T_A ≤ 85 °C, 3.0 V to 3.6 V and –40 °C ≤ T_A ≤ 85 °C, or 2.4 V to 3.0 V and –40 °C ≤ T_A ≤ 85 °C, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25 °C and are for design guidance only.

Table 13. DC POR and LVD Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
V _{PPOR0}	V _{DD} value for PPOR trip PORLEV[1:0] = 00b	–	2.36	2.40	V	V _{DD} must be greater than or equal to 2.5 V during startup, the reset from the XRES pin, or reset from watchdog
V _{PPOR1}	PORLEV[1:0] = 01b	–	2.82	2.95	V	
V _{PPOR2}	PORLEV[1:0] = 10b	–	4.55	4.70	V	
V _{LVD0}	V _{DD} value for LVD trip VM[2:0] = 000b	2.40	2.45	2.51 ^[21]	V	
V _{LVD1}	VM[2:0] = 001b	2.85	2.92	2.99 ^[22]	V	
V _{LVD2}	VM[2:0] = 010b	2.95	3.02	3.09	V	
V _{LVD3}	VM[2:0] = 011b	3.06	3.13	3.20	V	
V _{LVD4}	VM[2:0] = 100b	4.37	4.48	4.55	V	
V _{LVD5}	VM[2:0] = 101b	4.50	4.64	4.75	V	
V _{LVD6}	VM[2:0] = 110b	4.62	4.73	4.83	V	
V _{LVD7}	VM[2:0] = 111b	4.71	4.81	4.95	V	
V _{PUMP0}	V _{DD} value for pump trip VM[2:0] = 000b	2.45	2.55	2.62 ^[23]	V	
V _{PUMP1}	VM[2:0] = 001b	2.96	3.02	3.09	V	
V _{PUMP2}	VM[2:0] = 010b	3.03	3.10	3.16	V	
V _{PUMP3}	VM[2:0] = 011b	3.18	3.25	3.32 ^[24]	V	
V _{PUMP4}	VM[2:0] = 100b	4.54	4.64	4.74	V	
V _{PUMP5}	VM[2:0] = 101b	4.62	4.73	4.83	V	
V _{PUMP6}	VM[2:0] = 110b	4.71	4.82	4.92	V	
V _{PUMP7}	VM[2:0] = 111b	4.89	5.00	5.12	V	

Notes

21. Always greater than 50 mV above V_{PPOR} (PORLEV = 00) for falling supply.
22. Always greater than 50 mV above V_{PPOR} (PORLEV = 01) for falling supply.
23. Always greater than 50 mV above V_{LVD0}.
24. Always greater than 50 mV above V_{LVD3}.

DC Programming Specifications

Table 14 lists the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, 3.0 V to 3.6 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, or 2.4 V to 3.0 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25 °C and are for design guidance only.

Table 14. DC Programming Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
V _{DDP}	V _{DD} for programming and erase	4.5	5	5.5	V	This specification applies to the functional requirements of external programmer tools
V _{DDL}	Low V _{DD} for verify	2.4	2.5	2.6	V	This specification applies to the functional requirements of external programmer tools
V _{DDH}	High V _{DD} for verify	5.1	5.2	5.3	V	This specification applies to the functional requirements of external programmer tools
V _{DDIWRITE}	Supply voltage for flash write operation	2.7		5.25	V	This specification applies to this device when it is executing internal flash writes
I _{DDP}	Supply current during programming or verify	—	5	25	mA	
V _{ILP}	Input low voltage during programming or verify	—	—	0.8	V	
V _{IHP}	Input high voltage during programming or verify	2.2	—	—	V	
I _{ILP}	Input current when applying V _{ILP} to P1[0] or P1[1] during programming or verify	—	—	0.2	mA	Driving internal pull-down resistor
I _{IHP}	Input current when applying V _{IHP} to P1[0] or P1[1] during programming or verify	—	—	1.5	mA	Driving internal pull-down resistor
V _{OLV}	Output low voltage during programming or verify	—	—	V _{SS} + 0.75	V	
V _{OHV}	Output high voltage during programming or verify	V _{DD} - 1.0	—	V _{DD}	V	
Flash _{ENPB}	Flash endurance (per block)	50,000 ^[25]	—	—	—	Erase/write cycles per block
Flash _{ENT}	Flash endurance (total) ^[26]	1,800,000	—	—	—	Erase/write cycles
Flash _{DR}	Flash data retention	10	—	—	Years	

DC I²C Specifications

Table 15 lists the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, 3.0 V to 3.6 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, or 2.4 V to 3.0 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25 °C and are for design guidance only.

Table 15. DC I²C Specifications^[27]

Symbol	Description	Min	Typ	Max	Units	Notes
V _{ILI2C}	Input low level	—	—	0.3 × V _{DD}	V	2.4 V ≤ V _{DD} ≤ 3.6 V
		—	—	0.25 × V _{DD}	V	4.75 V ≤ V _{DD} ≤ 5.25 V
V _{IHI2C}	Input high level	0.7 × V _{DD}	—	—	V	2.4 V ≤ V _{DD} ≤ 5.25 V

Notes

25. The 50,000 cycle flash endurance per block is only guaranteed if the flash is operating within one voltage range. Voltage ranges are 2.4 V to 3.0 V, 3.0 V to 3.6 V, and 4.75 V to 5.25 V.

26. A maximum of 36 × 50,000 block endurance cycles is allowed. This may be balanced between operations on 36 × 1 blocks of 50,000 maximum cycles each, 36 × 2 blocks of 25,000 maximum cycles each, or 36 × 4 blocks of 12,500 maximum cycles each (to limit the total number of cycles to 36 × 50,000 and ensure that no single block ever sees more than 50,000 cycles). For the full industrial range, you must employ a temperature sensor user module (FlashTemp) and feed the result to the temperature argument before writing. Refer to the Flash APIs application note AN2015 (Design Aids - Reading and Writing PSoC® Flash) for more information.

27. All GPIO meet the DC GPIO VIL and VIH specifications found in the DC GPIO Specifications sections. The I²C GPIO pins also meet the above specs.

AC Electrical Characteristics

AC Chip-Level Specifications

The following tables list the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, 3.0 V to 3.6 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, or 2.4 V to 3.0 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25°C and are for design guidance only.

Table 16. 5-V and 3.3-V AC Chip-Level Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
$F_{\text{IMO}24}^{[28]}$	IMO frequency for 24 MHz	23.4	24	24.6 ^[29,30]	MHz	Trimmed for 5 V or 3.3 V operation using factory trim values. See Figure 12 on page 21 . SLIMO mode = 0
$F_{\text{IMO}6}^{[28]}$	IMO frequency for 6 MHz	5.52	6	6.48 ^[29,30]	MHz	Trimmed for 5 V or 3.3 V operation using factory trim values. See Figure 12 on page 21 . SLIMO mode = 1
$F_{\text{CPU}1}$	CPU frequency (5 V nominal)	0.091	24	24.6 ^[29]	MHz	24 MHz only for SLIMO mode = 0
$F_{\text{CPU}2}$	CPU frequency (3.3 V nominal)	0.091	12	12.3 ^[30]	MHz	SLIMO mode = 0
$F_{\text{BLK}5}$	Digital PSoC block frequency (5 V nominal)	0	48	49.2 ^[29,31]	MHz	Refer to AC Digital Block Specifications on page 30
$F_{\text{BLK}33}$	Digital PSoC block frequency (3.3 V nominal)	0	24	24.6 ^[31]	MHz	
$F_{32\text{K}1}$	ILO frequency	15	32	64	kHz	
$F_{32\text{K}_U}$	ILO untrimmed frequency	5	—	100	kHz	After a reset and before the M8C starts to run, the ILO is not trimmed. See the system resets section of the PSoC Technical Reference Manual for details on this timing
t_{XRST}	External reset pulse width	10	—	—	μs	
DC24M	24 MHz duty cycle	40	50	60	%	
DCILO	ILO duty cycle	20	50	80	%	
Step24M	24 MHz trim step size	—	50	—	kHz	
$F_{\text{out}48\text{M}}$	48 MHz output frequency	46.8	48.0	49.2 ^[29,30]	MHz	Trimmed. Using factory trim values
F_{MAX}	Maximum frequency of signal on row input or row output.	—	—	12.3	MHz	
$\text{SR}_{\text{POWER_UP}}$	Power supply slew rate	—	—	250	V/ms	V_{DD} slew rate during power-up
t_{POWERUP}	Time from end of POR to CPU executing code	—	16	100	ms	Power-up from 0 V. See the System Resets section of the PSoC Technical Reference Manual
$t_{\text{jit_IMO}}$	24-MHz IMO cycle-to-cycle jitter (RMS) ^[32]	—	200	700	ps	
	24-MHz IMO long term N cycle-to-cycle jitter (RMS) ^[32]	—	300	900	ps	N = 32
	24-MHz IMO period jitter (RMS) ^[32]	—	100	400	ps	

Notes

28. **Errata:** The worst case IMO frequency deviation when operated below 0°C and above $+70^{\circ}\text{C}$ and within the upper and lower datasheet temperature range is $\pm 5\%$.

29. $4.75\text{ V} < V_{\text{DD}} < 5.25\text{ V}$.

30. $3.0\text{ V} < V_{\text{DD}} < 3.6\text{ V}$. See application note [AN2012](#) "Adjusting PSoC Microcontroller Trims for Dual Voltage-Range Operation" for information on trimming for operation at 3.3 V.

31. See the individual user module datasheets for information on maximum frequencies for user modules.

32. Refer to Cypress Jitter Specifications Application Note [AN5054](#) "Understanding Datasheet Jitter Specifications for Cypress Timing Products" at www.cypress.com under Application Notes for more information.

Table 17. 2.7-V AC Chip-Level Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
$F_{IMO12}^{[33]}$	IMO frequency for 12 MHz	11.04	12	12.96 ^[34, 35]	MHz	Trimmed for 2.7 V operation using factory trim values. See Figure 12 on page 21 . SLIMO mode = 1
$F_{IMO6}^{[33]}$	IMO frequency for 6 MHz	5.52	6	6.48 ^[34, 35]	MHz	Trimmed for 2.7 V operation using factory trim values. See Figure 12 on page 21 . SLIMO mode = 1
F_{CPU1}	CPU frequency (2.7 V nominal)	0.093	3	3.15 ^[34]	MHz	12 MHz only for SLIMO mode = 0
F_{BLK27}	Digital PSoC block frequency (2.7 V nominal)	0	12	12.5 ^[34, 35]	MHz	Refer to AC Digital Block Specifications on page 30
F_{32K1}	ILO frequency	8	32	96	kHz	
F_{32K_U}	ILO untrimmed frequency	5	—	100	kHz	After a reset and before the M8C starts to run, the ILO is not trimmed. See the System Resets section of the PSoC Technical Reference Manual for details on this timing
t_{XRST}	External reset pulse width	10	—	—	μs	
DC_{ILO}	ILO duty cycle	20	50	80	%	
F_{MAX}	Maximum frequency of signal on row input or row output.	—	—	12.3	MHz	
SR_{POWER_UP}	Power supply slew rate	—	—	250	V/ms	V_{DD} slew rate during power-up
$t_{POWERUP}$	Time from end of POR to CPU executing code	—	16	100	ms	Power-up from 0 V. See the System Resets section of the PSoC Technical Reference Manual .
t_{jit_IMO}	12 MHz IMO cycle-to-cycle jitter (RMS) ^[36]	—	400	1000	ps	
	12 MHz IMO long term N cycle-to-cycle jitter (RMS) ^[36]	—	600	1300	ps	N = 32
	12 MHz IMO period jitter (RMS) ^[36]	—	100	500	ps	

Notes

33. **Errata:** The worst case IMO frequency deviation when operated below 0 °C and above +70 °C and within the upper and lower datasheet temperature range is ±5%.

34. 2.4 V < V_{DD} < 3.0 V.

35. See Application Note [AN2012](#) "Adjusting PSoC Microcontroller Trims for Dual Voltage-Range Operation" available at <http://www.cypress.com> for information on maximum frequency for user modules.

36. Refer to Cypress Jitter Specifications Application Note [AN5054](#) "Understanding Datasheet Jitter Specifications for Cypress Timing Products" at www.cypress.com under Application Notes for more information.

AC General Purpose I/O Specifications

The following tables list the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, 3.0 V to 3.6 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, or 2.4 V to 3.0 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25°C and are for design guidance only.

Table 18. 5-V and 3.3-V AC GPIO Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
F_{GPIO}	GPIO operating frequency	0	–	12	MHz	Normal strong mode
T_{RiseF}	Rise time, normal strong mode, Cload = 50 pF	3	–	18	ns	$V_{\text{DD}} = 4.5$ to 5.25 V, 10% to 90%
T_{FallF}	Fall time, normal strong mode, Cload = 50 pF	2	–	18	ns	$V_{\text{DD}} = 4.5$ to 5.25 V, 10% to 90%
T_{RiseS}	Rise time, slow strong mode, Cload = 50 pF	7	27	–	ns	$V_{\text{DD}} = 3$ to 5.25 V, 10% to 90%
T_{FallS}	Fall time, slow strong mode, Cload = 50 pF	7	22	–	ns	$V_{\text{DD}} = 3$ to 5.25 V, 10% to 90%

Table 19. 2.7 V AC GPIO Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
F_{GPIO}	GPIO operating frequency	0	–	3	MHz	Normal strong mode
T_{RiseF}	Rise time, normal strong mode, Cload = 50 pF	6	–	50	ns	$V_{\text{DD}} = 2.4$ to 3.0 V, 10% to 90%
T_{FallF}	Fall time, normal strong mode, Cload = 50 pF	6	–	50	ns	$V_{\text{DD}} = 2.4$ to 3.0 V, 10% to 90%
T_{RiseS}	Rise time, slow strong mode, Cload = 50 pF	18	40	120	ns	$V_{\text{DD}} = 2.4$ to 3.0 V, 10% to 90%
T_{FallS}	Fall time, slow strong mode, Cload = 50 pF	18	40	120	ns	$V_{\text{DD}} = 2.4$ to 3.0 V, 10% to 90%

Figure 14. GPIO Timing Diagram

AC Operational Amplifier Specifications

Table 20 lists the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, 3.0 V to 3.6 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, or 2.4 V to 3.0 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25°C and are for design guidance only.

Table 20. AC Operational Amplifier Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
T_{COMP}	Comparator mode response time, 50 mV overdrive	–	–	100 200	ns ns	$V_{\text{DD}} \geq 3.0$ V $2.4 \text{ V} < V_{\text{DD}} < 3.0$ V

AC Digital Block Specifications

The following tables list the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, 3.0 V to 3.6 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, or 2.4 V to 3.0 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25°C and are for design guidance only.

Table 21. 5-V and 3.3-V AC Digital Block Specifications

Function	Description	Min	Typ	Max	Unit	Notes
All functions	Block input clock frequency					
	$V_{DD} \geq 4.75\text{ V}$	–	–	49.2	MHz	
	$V_{DD} < 4.75\text{ V}$	–	–	24.6	MHz	
Timer	Input clock frequency					
	No capture, $V_{DD} \geq 4.75\text{ V}$	–	–	49.2	MHz	
	No capture, $V_{DD} < 4.75\text{ V}$	–	–	24.6	MHz	
	With capture	–	–	24.6	MHz	
	Capture pulse width	50 ^[37]	–	–	ns	
Counter	Input clock frequency					
	No enable input, $V_{DD} \geq 4.75\text{ V}$	–	–	49.2	MHz	
	No enable input, $V_{DD} < 4.75\text{ V}$	–	–	24.6	MHz	
	With enable input	–	–	24.6	MHz	
	Enable input pulse width	50 ^[37]	–	–	ns	
Dead Band	Kill pulse width					
	Asynchronous restart mode	20	–	–	ns	
	Synchronous restart mode	50 ^[37]	–	–	ns	
	Disable mode	50 ^[37]	–	–	ns	
	Input clock frequency					
	$V_{DD} \geq 4.75\text{ V}$	–	–	49.2	MHz	
	$V_{DD} < 4.75\text{ V}$	–	–	24.6	MHz	
CRCPRS (PRS Mode)	Input clock frequency					
	$V_{DD} \geq 4.75\text{ V}$	–	–	49.2	MHz	
	$V_{DD} < 4.75\text{ V}$	–	–	24.6	MHz	
CRCPRS (CRC Mode)	Input clock frequency	–	–	24.6	MHz	
SPIM	Input clock frequency	–	–	8.2	MHz	The SPI serial clock (SCLK) frequency is equal to the input clock frequency divided by 2.
SPIS	Input clock (SCLK) frequency	–	–	4.1	MHz	The input clock is the SPI SCLK in SPIS mode.
	Width of SS_negated between transmissions	50 ^[37]	–	–	ns	
Transmitter	Input clock frequency					The baud rate is equal to the input clock frequency divided by 8.
	$V_{DD} \geq 4.75\text{ V}$, 2 stop bits	–	–	49.2	MHz	
	$V_{DD} \geq 4.75\text{ V}$, 1 stop bit	–	–	24.6	MHz	
	$V_{DD} < 4.75\text{ V}$	–	–	24.6	MHz	
Receiver	Input clock frequency					The baud rate is equal to the input clock frequency divided by 8.
	$V_{DD} \geq 4.75\text{ V}$, 2 stop bits	–	–	49.2	MHz	
	$V_{DD} \geq 4.75\text{ V}$, 1 stop bit	–	–	24.6	MHz	
	$V_{DD} < 4.75\text{ V}$	–	–	24.6	MHz	

Note

37. 50 ns minimum input pulse width is based on the input synchronizers running at 24 MHz (42 ns nominal period).

Table 22. 2.7-V AC Digital Block Specifications

Function	Description	Min	Typ	Max	Units	Notes
All functions	Block input clock frequency	–	–	12.7	MHz	2.4 V < V _{DD} < 3.0 V
Timer	Capture pulse width	100 ^[38]	–	–	ns	
	Input clock frequency, with or without capture	–	–	12.7	MHz	
Counter	Enable input pulse width	100	–	–	ns	
	Input clock frequency, no enable input	–	–	12.7	MHz	
	Input clock frequency, enable input	–	–	12.7	MHz	
Dead Band	Kill pulse width:					
	Asynchronous restart mode	20	–	–	ns	
	Synchronous restart mode	100	–	–	ns	
	Disable mode	100	–	–	ns	
	Input clock frequency	–	–	12.7	MHz	
CRCPRS (PRS Mode)	Input clock frequency	–	–	12.7	MHz	
CRCPRS (CRC Mode)	Input clock frequency	–	–	12.7	MHz	
SPIM	Input clock frequency	–	–	6.35	MHz	The SPI serial clock (SCLK) frequency is equal to the input clock frequency divided by 2.
SPIS	Input clock (SCLK) frequency	–	–	4.1	MHz	
	Width of SS_ Negated between transmissions	100	–	–	ns	
Transmitter	Input clock frequency	–	–	12.7	MHz	The baud rate is equal to the input clock frequency divided by 8.
Receiver	Input clock frequency	–	–	12.7	MHz	The baud rate is equal to the input clock frequency divided by 8.

AC External Clock Specifications

The following tables list the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, or 3.0 V to 3.6 V and $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25 °C and are for design guidance only.

Table 23. 5-V AC External Clock Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
F _{OSCEXT}	Frequency	0.093	–	24.6	MHz	
–	High period	20.6	–	5300	ns	
–	Low period	20.6	–	–	ns	
–	Power-up IMO to switch	150	–	–	µs	

Note

38. 100 ns minimum input pulse width is based on the input synchronizers running at 12 MHz (84 ns nominal period).

Table 24. 3.3-V AC External Clock Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
F _{OSCEXT}	Frequency with CPU clock divide by 1	0.093	–	12.3	MHz	Maximum CPU frequency is 12 MHz at 3.3 V. With the CPU clock divider set to 1, the external clock must adhere to the maximum frequency and duty cycle requirements
F _{OSCEXT}	Frequency with CPU clock divide by 2 or greater	0.186	–	24.6	MHz	If the frequency of the external clock is greater than 12 MHz, the CPU clock divider must be set to 2 or greater. In this case, the CPU clock divider ensures that the fifty percent duty cycle requirement is met
–	High period with CPU clock divide by 1	41.7	–	5300	ns	
–	Low period with CPU clock divide by 1	41.7	–	–	ns	
–	Power-up IMO to switch	150	–	–	µs	

Table 25. 2.7-V AC External Clock Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
F _{OSCEXT}	Frequency with CPU clock divide by 1	0.093	–	3.08	MHz	Maximum CPU frequency is 3 MHz at 2.7 V. With the CPU clock divider set to 1, the external clock must adhere to the maximum frequency and duty cycle requirements
F _{OSCEXT}	Frequency with CPU clock divide by 2 or greater	0.186	–	6.35	MHz	If the frequency of the external clock is greater than 3 MHz, the CPU clock divider must be set to 2 or greater. In this case, the CPU clock divider ensures that the fifty percent duty cycle requirement is met
–	High period with CPU clock divide by 1	160	–	5300	ns	
–	Low period with CPU clock divide by 1	160	–	–	ns	
–	Power-up IMO to switch	150	–	–	µs	

AC Programming Specifications

Table 26 lists the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and $-40\text{ }^{\circ}\text{C} \leq T_A \leq 85\text{ }^{\circ}\text{C}$, or 3.0 V to 3.6 V and $-40\text{ }^{\circ}\text{C} \leq T_A \leq 85\text{ }^{\circ}\text{C}$, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25 °C and are for design guidance only.

Table 26. AC Programming Specifications

Symbol	Description	Min	Typ	Max	Units	Notes
T_{RSCLK}	Rise time of SCLK	1	–	20	ns	
T_{FSCLK}	Fall time of SCLK	1	–	20	ns	
T_{SSCLK}	Data setup time to falling edge of SCLK	40	–	–	ns	
T_{HSCLK}	Data hold time from falling edge of SCLK	40	–	–	ns	
F_{SCLK}	Frequency of SCLK	0	–	8	MHz	
T_{ERASEB}	Flash erase time (block)	–	10	–	ms	
T_{WRITE}	Flash block write time	–	40	–	ms	
T_{DSCLK}	Data out delay from falling edge of SCLK	–	–	45	ns	$3.6 < V_{DD}$
T_{DSCLK3}	Data out delay from falling edge of SCLK	–	–	50	ns	$3.0 \leq V_{DD} \leq 3.6$
T_{DSCLK2}	Data out delay from falling edge of SCLK	–	–	70	ns	$2.4 \leq V_{DD} \leq 3.0$
$T_{ERASEALL}$	Flash erase time (Bulk)	–	20	–	ms	Erase all blocks and protection fields at once
$T_{PROGRAM_HOT}$	Flash block erase + flash block write time	–	–	100 ^[39]	ms	$0\text{ }^{\circ}\text{C} \leq T_j \leq 100\text{ }^{\circ}\text{C}$
$T_{PROGRAM_COLD}$	Flash block erase + flash block write time	–	–	200 ^[39]	ms	$-40\text{ }^{\circ}\text{C} \leq T_j \leq 0\text{ }^{\circ}\text{C}$

AC I²C^[40] Specifications

The following tables list the guaranteed maximum and minimum specifications for the voltage and temperature ranges: 4.75 V to 5.25 V and $-40\text{ }^{\circ}\text{C} \leq T_A \leq 85\text{ }^{\circ}\text{C}$, 3.0 V to 3.6 V and $-40\text{ }^{\circ}\text{C} \leq T_A \leq 85\text{ }^{\circ}\text{C}$, or 2.4 V to 3.0 V and $-40\text{ }^{\circ}\text{C} \leq T_A \leq 85\text{ }^{\circ}\text{C}$, respectively. Typical parameters are measured at 5 V, 3.3 V, or 2.7 V at 25 °C and are for design guidance only.

Table 27. AC Characteristics of the I²C SDA and SCL Pins for $V_{DD} \geq 3.0\text{ V}$

Symbol	Description	Standard Mode		Fast Mode		Units
		Min	Max	Min	Max	
F_{SCL2C}	SCL clock frequency	0	100	0	400	kHz
$T_{HDSTA2C}$	Hold time (repeated) start condition. After this period, the first clock pulse is generated	4.0	–	0.6	–	μs
T_{LOW2C}	Low period of the SCL clock	4.7	–	1.3	–	μs
T_{HIGH2C}	High period of the SCL clock	4.0	–	0.6	–	μs
$T_{SUSTA2C}$	Setup time for a repeated start condition	4.7	–	0.6	–	μs
$T_{HDDAT2C}$	Data hold time	0	–	0	–	μs
$T_{SUDAT2C}$	Data setup time	250	–	100 ^[41]	–	ns
$T_{SUSTOI2C}$	Setup time for stop condition	4.0	–	0.6	–	μs
T_{BUFI2C}	Bus free time between a stop and start condition	4.7	–	1.3	–	μs
T_{SPI2C}	Pulse width of spikes suppressed by the input filter.	–	–	0	50	ns

Notes

39. For the full industrial range, the user must employ a temperature sensor user module (FlashTemp) and feed the result to the temperature argument before writing. Refer to the Flash APIs application note [AN2015](#) (Design Aids - Reading and Writing PSoC® Flash) for more information.

40. **Errata:** The I²C block exhibits occasional data and bus corruption errors when the I²C master initiates transactions while the device is transitioning in to or out of sleep mode.

41. A Fast-Mode I²C-bus device may be used in a Standard-Mode I²C-bus system, but it must meet the requirement $T_{SU,DAT} \geq 250\text{ ns}$. This is automatically the case if the device does not stretch the LOW period of the SCL signal. If the device does stretch the LOW period of the SCL signal, it must output the next data bit to the SDA line $T_{rmax} + T_{SU,DAT} = 1000 + 250 = 1250\text{ ns}$ (according to the Standard-Mode I²C-bus specification) before the SCL line is released.

Table 28. 2.7-V AC Characteristics of the I²C SDA and SCL Pins (Fast Mode not Supported)

Symbol	Description	Standard Mode		Fast Mode		Units
		Min	Max	Min	Max	
F _{SCL I2C}	SCL clock frequency	0	100	—	—	kHz
T _{HDSTA I2C}	Hold time (repeated) start condition. After this period, the first clock pulse is generated.	4.0	—	—	—	μs
T _{LOW I2C}	Low period of the SCL clock	4.7	—	—	—	μs
T _{HIGH I2C}	High period of the SCL clock	4.0	—	—	—	μs
T _{SUSTA I2C}	Setup time for a repeated start condition	4.7	—	—	—	μs
T _{HDDAT I2C}	Data hold time	0	—	—	—	μs
T _{SUDAT I2C}	Data setup time	250	—	—	—	ns
T _{SUSTOI2C}	Setup time for stop condition	4.0	—	—	—	μs
T _{BUFI2C}	Bus free time between a stop and start condition	4.7	—	—	—	μs
T _{SPI2C}	Pulse width of spikes are suppressed by the input filter.	—	—	—	—	ns

Packaging Information

This section shows the packaging specifications for the CY8C21x34 PSoC device with the thermal impedances for each package.

Important Note Emulation tools may require a larger area on the target PCB than the chip's footprint. For a detailed description of the emulation tools' dimensions, refer to the emulator pod drawings at <http://www.cypress.com>.

Thermal Impedances

Table 29. Thermal Impedances per Package

Package	Typical θ_{JA} ^[42]	Typical θ_{JC}
16-pin SOIC	123 °C/W	55 °C/W
20-pin SSOP	117 °C/W	41 °C/W
28-pin SSOP	96 °C/W	39 °C/W
32-pin QFN ^[43] 5 × 5 mm 0.60 Max	27 °C/W	15 °C/W
32-pin QFN ^[43] 5 × 5 mm 1.00 Max	22 °C/W	12 °C/W
56-pin SSOP	48 °C/W	24 °C/W

Solder Reflow Specifications

Table 30 shows the solder reflow temperature limits that must not be exceeded.

Table 30. Solder Reflow Specifications

Package	Maximum Peak Temperature (T_C)	Maximum Time above $T_C - 5\text{ °C}$
16-pin SOIC	260 °C	30 seconds
20-pin SSOP	260 °C	30 seconds
28-pin SSOP	260 °C	30 seconds
32-pin QFN	260 °C	30 seconds
56-pin SSOP	260 °C	30 seconds

Notes

42. $T_J = T_A + \text{Power} \times \theta_{JA}$

43. To achieve the thermal impedance specified for the QFN package, refer to *Application Note EROS - Design Guidelines for Cypress Quad Flat No Extended Lead (QFN) Packaged Devices* available at <http://www.cypress.com>.

44. Higher temperatures may be required based on the solder melting point. Typical temperatures for solder are $220 \pm 5\text{ °C}$ with Sn-Pb or $245 \pm 5\text{ °C}$ with Sn-Ag-Cu paste. Refer to the solder manufacturer specifications.

Development Tool Selection

This section presents the development tools available for all current PSoC device families including the CY8C21x34 family.

Software

PSoC Designer™

At the core of the PSoC development software suite is PSoC Designer, used to generate PSoC firmware applications. PSoC Designer is available free of charge at <http://www.cypress.com> and includes a free C compiler.

PSoC Programmer

Flexible enough to be used on the bench in development, yet suitable for factory programming, PSoC Programmer works either as a standalone programming application or operates directly from PSoC Designer. PSoC Programmer software is compatible with both PSoC ICE-Cube In-Circuit Emulator and PSoC MiniProg. PSoC programmer is available free of charge at <http://www.cypress.com>.

Development Kits

All development kits can be purchased from the Cypress Online Store.

CY3215-DK Basic Development Kit

The [CY3215-DK](#) is for prototyping and development with PSoC Designer. This kit supports in-circuit emulation, and the software interface allows you to run, halt, and single step the processor, and view the content of specific memory locations. Advance emulation features also supported through PSoC Designer. The kit includes:

- PSoC Designer software CD
- ICE-Cube in-circuit emulator
- ICE Flex-Pod for CY8C29x66 family
- Cat-5 adapter
- Mini-Eval programming board
- 110 ~ 240 V power supply, Euro-Plug adapter
- iMAGEcraft C compiler
- ISSP cable
- USB 2.0 cable and Blue Cat-5 cable
- Two CY8C29466-24PXI 28-PDIP chip samples

Evaluation Tools

All evaluation tools can be purchased from the Cypress Online Store.

CY3210-MiniProg1

The [CY3210-MiniProg1 kit](#) allows you to program PSoC devices through the MiniProg1 programming unit. The MiniProg is a small, compact prototyping programmer that connects to the PC through a provided USB 2.0 cable. The kit includes:

- MiniProg programming unit
- MiniEval socket programming and evaluation board
- 28-pin CY8C29466-24PXI PDIP PSoC device sample
- 28-pin CY8C27443-24PXI PDIP PSoC device sample
- PSoC Designer software CD
- Getting Started guide
- USB 2.0 cable

CY3210-PSoCEval1

The [CY3210-PSoCEval1 kit](#) features an evaluation board and the MiniProg1 programming unit. The evaluation board includes an LCD module, potentiometer, LEDs, and plenty of breadboarding space to meet all of your evaluation needs. The kit includes:

- Evaluation board with LCD module
- MiniProg programming unit
- Two 28-pin CY8C29466-24PXI PDIP PSoC device samples
- PSoC Designer software CD
- Getting Started guide
- USB 2.0 cable

CY3214-PSoCEvalUSB

The [CY3214-PSoCEvalUSB evaluation kit](#) features a development board for the CY8C24794-24LFXI PSoC device. The board includes both USB and capacitive sensing development and debugging support. This evaluation board also includes an LCD module, potentiometer, LEDs, an enunciator and plenty of breadboarding space to meet all of your evaluation needs. The kit includes:

- PSoCEvalUSB board
- LCD module
- MiniProg programming unit
- Mini USB cable
- PSoC Designer and example projects CD
- Getting Started guide
- Wire pack

Device Programmers

All device programmers can be purchased from the Cypress Online Store.

CY3216 Modular Programmer

The **CY3216 Modular Programmer kit** features a modular programmer and the MiniProg1 programming unit. The modular programmer includes three programming module cards and supports multiple Cypress products. The kit includes:

- Modular programmer base
- Three programming module cards
- MiniProg programming unit
- PSoC Designer software CD
- Getting Started guide
- USB 2.0 cable

CY3207ISSP In-System Serial Programmer (ISSP)

The **CY3207ISSP** is a production programmer. It includes protection circuitry and an industrial case that is more robust than the MiniProg in a production-programming environment.

Note CY3207ISSP needs special software and is not compatible with PSoC Programmer. The kit includes:

- CY3207 programmer unit
- PSoC ISSP software CD
- 110 ~ 240 V power supply, Euro-Plug adapter
- USB 2.0 cable

Accessories (Emulation and Programming)

Table 31. Emulation and Programming Accessories

Part Number	Pin Package	Flex-Pod Kit ^[45]	Foot Kit ^[46]	Adapter
CY8C21234-24SXI	16-pin SOIC	CY3250-21X34	CY3250-16SOIC-FK	Adapters can be found at http://www.emulation.com .
CY8C21334-24PVXI	20-pin SSOP	CY3250-21X34	CY3250-20SSOP-FK	
CY8C21534-24PVXI	28-pin SSOP	CY3250-21X34	CY3250-28SSOP-FK	

Notes

45. Flex-Pod kit includes a practice flex-pod and a practice PCB, in addition to two flex-pods.

46. Foot kit includes surface mount feet that can be soldered to the target PCB.

Ordering Information

Package	Ordering Code	Flash (Bytes)	SRAM (Bytes)	Switch Mode Pump	Temperature Range	Digital Blocks	Analog Blocks	Digital I/O Pins	Analog Inputs	Analog Outputs	XRES Pin
16-Pin (150-Mil) SOIC	CY8C21234-24SXI	8K	512	Yes	–40 °C to +85 °C	4	4	12	12 ^[47]	0	No

56-Pin OCD SSOP	CY8C21001-24PVXI	8K	512	Yes	–40 °C to +85 °C	4	4	26	26 ^[47]	0	Yes
	CY8C21434-12X14I	Please contact sales office or Field Applications Engineer (FAE) for more information.									

Note For Die sales information, contact a local Cypress sales office or Field Applications Engineer (FAE).

Notes

47. All Digital I/O Pins also connect to the common analog mux.

48. Refer to the section [32-pin Part Pinout on page 12](#) for pin differences.

Ordering Code Definitions

Acronyms

Table 32 lists the acronyms that are used in this document.

Table 32. Acronyms Used

Acronym	Description	Acronym	Description
AC	alternating current	MIPS	million instructions per second
ADC	analog-to-digital converter	OCD	on-chip debug
API	application programming interface	PCB	printed circuit board
CMOS	complementary metal oxide semiconductor	PDIP	plastic dual-in-line package
CPU	central processing unit	PGA	programmable gain amplifier
CRC	cyclic redundancy check	PLL	phase-locked loop
CT	continuous time	POR	power on reset
DAC	digital-to-analog converter	PPOR	precision power on reset
DC	direct current	PRS	pseudo-random sequence
DTMF	dual-tone multi-frequency	PSoC®	Programmable System-on-Chip
ECO	external crystal oscillator	PWM	pulse width modulator
EEPROM	electrically erasable programmable read-only memory	QFN	quad flat no leads
GPIO	general purpose I/O	RTC	real time clock
ICE	in-circuit emulator	SAR	successive approximation
IDE	integrated development environment	SC	switched capacitor
ILO	internal low speed oscillator	SLIMO	slow IMO
IMO	internal main oscillator	SMP	switch-mode pump
I/O	input/output	SOIC	small-outline integrated circuit
IrDA	infrared data association	SPI™	serial peripheral interface
ISSP	in-system serial programming	SRAM	static random access memory
LCD	liquid crystal display	SROM	supervisory read only memory
LED	light-emitting diode	SSOP	shrink small-outline package
LPC	low power comparator	UART	universal asynchronous receiver / transmitter
LVD	low voltage detect	USB	universal serial bus
MAC	multiply-accumulate	WDT	watchdog timer
MCU	microcontroller unit	XRES	external reset

Units of Measure

Table 33 lists the units of measures.

Table 33. Units of Measure

Symbol	Unit of Measure	Symbol	Unit of Measure
kB	1024 bytes	μH	micro henry
dB	decibels	μs	microsecond
°C	degree Celsius	ms	millisecond
μF	microfarad	ns	nanosecond
fF	femto farad	ps	picosecond
pF	picofarad	μV	microvolt
kHz	kilohertz	mV	millivolts
MHz	megahertz	mVpp	millivolts peak-to-peak
rt-Hz	root hertz	nV	nano volt
kΩ	kilo ohm	V	volt
Ω	ohm	μW	microwatt
μA	microampere	W	watt
mA	milliampere	mm	millimeter
nA	nano ampere	ppm	parts per million
pA	pico ampere	%	percent
mH	millihenry		

Numeric Conventions

Hexadecimal numbers are represented with all letters in uppercase with an appended lowercase 'h' (for example, '14h' or '3Ah'). Hexadecimal numbers may also be represented by a '0x' prefix, the C coding convention. Binary numbers have an appended lowercase 'b' (for example, '01010100b' or '01000011b'). Numbers not indicated by an 'h' or 'b' are decimals.

Glossary

active high	1. A logic signal having its asserted state as the logic 1 state. 2. A logic signal having the logic 1 state as the higher voltage of the two states.
analog blocks	The basic programmable opamp circuits. These are SC (switched capacitor) and CT (continuous time) blocks. These blocks can be interconnected to provide ADCs, DACs, multi-pole filters, gain stages, and much more.
analog-to-digital (ADC)	A device that changes an analog signal to a digital signal of corresponding magnitude. Typically, an ADC converts a voltage to a digital number. The digital-to-analog (DAC) converter performs the reverse operation.
Application programming interface (API)	A series of software routines that comprise an interface between a computer application and lower level services and functions (for example, user modules and libraries). APIs serve as building blocks for programmers that create software applications.
asynchronous	A signal whose data is acknowledged or acted upon immediately, irrespective of any clock signal.
bandgap reference	A stable voltage reference design that matches the positive temperature coefficient of VT with the negative temperature coefficient of VBE, to produce a zero temperature coefficient (ideally) reference.
bandwidth	1. The frequency range of a message or information processing system measured in hertz. 2. The width of the spectral region over which an amplifier (or absorber) has substantial gain (or loss); it is sometimes represented more specifically as, for example, full width at half maximum.

Glossary (continued)

bias	1. A systematic deviation of a value from a reference value. 2. The amount by which the average of a set of values departs from a reference value. 3. The electrical, mechanical, magnetic, or other force (field) applied to a device to establish a reference level to operate the device.
block	1. A functional unit that performs a single function, such as an oscillator. 2. A functional unit that may be configured to perform one of several functions, such as a digital PSoC block or an analog PSoC block.
buffer	1. A storage area for data that is used to compensate for a speed difference, when transferring data from one device to another. Usually refers to an area reserved for IO operations, into which data is read, or from which data is written. 2. A portion of memory set aside to store data, often before it is sent to an external device or as it is received from an external device. 3. An amplifier used to lower the output impedance of a system.
bus	1. A named connection of nets. Bundling nets together in a bus makes it easier to route nets with similar routing patterns. 2. A set of signals performing a common function and carrying similar data. Typically represented using vector notation; for example, address[7:0]. 3. One or more conductors that serve as a common connection for a group of related devices.
clock	The device that generates a periodic signal with a fixed frequency and duty cycle. A clock is sometimes used to synchronize different logic blocks.
comparator	An electronic circuit that produces an output voltage or current whenever two input levels simultaneously satisfy predetermined amplitude requirements.
compiler	A program that translates a high level language, such as C, into machine language.
configuration space	In PSoC devices, the register space accessed when the XIO bit, in the CPU_F register, is set to '1'.
crystal oscillator	An oscillator in which the frequency is controlled by a piezoelectric crystal. Typically a piezoelectric crystal is less sensitive to ambient temperature than other circuit components.
cyclic redundancy check (CRC)	A calculation used to detect errors in data communications, typically performed using a linear feedback shift register. Similar calculations may be used for a variety of other purposes such as data compression.
data bus	A bi-directional set of signals used by a computer to convey information from a memory location to the central processing unit and vice versa. More generally, a set of signals used to convey data between digital functions.
debugger	A hardware and software system that allows you to analyze the operation of the system under development. A debugger usually allows the developer to step through the firmware one step at a time, set break points, and analyze memory.
dead band	A period of time when neither of two or more signals are in their active state or in transition.
digital blocks	The 8-bit logic blocks that can act as a counter, timer, serial receiver, serial transmitter, CRC generator, pseudo-random number generator, or SPI.
digital-to-analog (DAC)	A device that changes a digital signal to an analog signal of corresponding magnitude. The analog-to-digital (ADC) converter performs the reverse operation.

Glossary (continued)

duty cycle	The relationship of a clock period high time to its low time, expressed as a percent.
emulator	Duplicates (provides an emulation of) the functions of one system with a different system, so that the second system appears to behave like the first system.
External Reset (XRES)	An active high signal that is driven into the PSoC device. It causes all operation of the CPU and blocks to stop and return to a pre-defined state.
Flash	An electrically programmable and erasable, non-volatile technology that provides you the programmability and data storage of EPROMs, plus in-system erasability. Non-volatile means that the data is retained when power is OFF.
Flash block	The smallest amount of Flash ROM space that may be programmed at one time and the smallest amount of Flash space that may be protected. A Flash block holds 64 bytes.
frequency	The number of cycles or events per unit of time, for a periodic function.
gain	The ratio of output current, voltage, or power to input current, voltage, or power, respectively. Gain is usually expressed in dB.
I ² C	A two-wire serial computer bus by Philips Semiconductors (now NXP Semiconductors). I2C is an Inter-Integrated Circuit. It is used to connect low-speed peripherals in an embedded system. The original system was created in the early 1980s as a battery control interface, but it was later used as a simple internal bus system for building control electronics. I2C uses only two bi-directional pins, clock and data, both running at +5 V and pulled high with resistors. The bus operates at 100 kbits/second in standard mode and 400 kbits/second in fast mode.
ICE	The in-circuit emulator that allows you to test the project in a hardware environment, while viewing the debugging device activity in a software environment (PSoC Designer).
input/output (I/O)	A device that introduces data into or extracts data from a system.
interrupt	A suspension of a process, such as the execution of a computer program, caused by an event external to that process, and performed in such a way that the process can be resumed.
interrupt service routine (ISR)	A block of code that normal code execution is diverted to when the M8C receives a hardware interrupt. Many interrupt sources may each exist with its own priority and individual ISR code block. Each ISR code block ends with the RETI instruction, returning the device to the point in the program where it left normal program execution.
jitter	1. A misplacement of the timing of a transition from its ideal position. A typical form of corruption that occurs on serial data streams. 2. The abrupt and unwanted variations of one or more signal characteristics, such as the interval between successive pulses, the amplitude of successive cycles, or the frequency or phase of successive cycles.
low-voltage detect (LVD)	A circuit that senses V _{dd} and provides an interrupt to the system when V _{dd} falls below a selected threshold.
M8C	An 8-bit Harvard-architecture microprocessor. The microprocessor coordinates all activity inside a PSoC by interfacing to the Flash, SRAM, and register space.
master device	A device that controls the timing for data exchanges between two devices. Or when devices are cascaded in width, the master device is the one that controls the timing for data exchanges between the cascaded devices and an external interface. The controlled device is called the slave device .

Glossary (continued)

microcontroller	An integrated circuit chip that is designed primarily for control systems and products. In addition to a CPU, a microcontroller typically includes memory, timing circuits, and IO circuitry. The reason for this is to permit the realization of a controller with a minimal quantity of chips, thus achieving maximal possible miniaturization. This in turn, reduces the volume and the cost of the controller. The microcontroller is normally not used for general-purpose computation as is a microprocessor.
mixed-signal	The reference to a circuit containing both analog and digital techniques and components.
modulator	A device that imposes a signal on a carrier.
noise	1. A disturbance that affects a signal and that may distort the information carried by the signal. 2. The random variations of one or more characteristics of any entity such as voltage, current, or data.
oscillator	A circuit that may be crystal controlled and is used to generate a clock frequency.
parity	A technique for testing transmitting data. Typically, a binary digit is added to the data to make the sum of all the digits of the binary data either always even (even parity) or always odd (odd parity).
Phase-locked loop (PLL)	An electronic circuit that controls an oscillator so that it maintains a constant phase angle relative to a reference signal.
pinouts	The pin number assignment: the relation between the logical inputs and outputs of the PSoC device and their physical counterparts in the printed circuit board (PCB) package. Pinouts involve pin numbers as a link between schematic and PCB design (both being computer generated files) and may also involve pin names.
port	A group of pins, usually eight.
Power on reset (POR)	A circuit that forces the PSoC device to reset when the voltage is below a pre-set level. This is one type of hardware reset.
PSoC®	Cypress Semiconductor's PSoC® is a registered trademark and Programmable System-on-Chip™ is a trademark of Cypress.
PSoC Designer™	The software for Cypress' Programmable System-on-Chip technology.
pulse width modulator (PWM)	An output in the form of duty cycle which varies as a function of the applied measurand
RAM	An acronym for random access memory. A data-storage device from which data can be read out and new data can be written in.
register	A storage device with a specific capacity, such as a bit or byte.
reset	A means of bringing a system back to a know state. See hardware reset and software reset.
ROM	An acronym for read only memory. A data-storage device from which data can be read out, but new data cannot be written in.
serial	1. Pertaining to a process in which all events occur one after the other. 2. Pertaining to the sequential or consecutive occurrence of two or more related activities in a single device or channel.
settling time	The time it takes for an output signal or value to stabilize after the input has changed from one value to another.

Glossary (continued)

shift register	A memory storage device that sequentially shifts a word either left or right to output a stream of serial data.
slave device	A device that allows another device to control the timing for data exchanges between two devices. Or when devices are cascaded in width, the slave device is the one that allows another device to control the timing of data exchanges between the cascaded devices and an external interface. The controlling device is called the master device.
SRAM	An acronym for static random access memory. A memory device where you can store and retrieve data at a high rate of speed. The term static is used because, after a value is loaded into an SRAM cell, it remains unchanged until it is explicitly altered or until power is removed from the device.
SROM	An acronym for supervisory read only memory. The SROM holds code that is used to boot the device, calibrate circuitry, and perform Flash operations. The functions of the SROM may be accessed in normal user code, operating from Flash.
stop bit	A signal following a character or block that prepares the receiving device to receive the next character or block.
synchronous	1. A signal whose data is not acknowledged or acted upon until the next active edge of a clock signal. 2. A system whose operation is synchronized by a clock signal.
tri-state	A function whose output can adopt three states: 0, 1, and Z (high-impedance). The function does not drive any value in the Z state and, in many respects, may be considered to be disconnected from the rest of the circuit, allowing another output to drive the same net.
UART	A UART or universal asynchronous receiver-transmitter translates between parallel bits of data and serial bits.
user modules	Pre-build, pre-tested hardware/firmware peripheral functions that take care of managing and configuring the lower level Analog and Digital PSoC Blocks. User Modules also provide high level API (Application Programming Interface) for the peripheral function.
user space	The bank 0 space of the register map. The registers in this bank are more likely to be modified during normal program execution and not just during initialization. Registers in bank 1 are most likely to be modified only during the initialization phase of the program.
V _{DD}	A name for a power net meaning “voltage drain”. The most positive power supply signal. Usually 5 V or 3.3 V.
V _{SS}	A name for a power net meaning “voltage source”. The most negative power supply signal.
watchdog timer	A timer that must be serviced periodically. If it is not serviced, the CPU resets after a specified period of time.

Errata

This section describes the errata for the PSoC® Programmable System-on-Chip CY8C21X34. Details include errata trigger conditions, scope of impact, available workarounds, and silicon revision applicability.

Contact your local Cypress Sales Representative if you have questions.

Part Numbers Affected

Part Number	Ordering Information

CY8C21X34 Qualification Status

Product Status: Production

CY8C21X34 Errata Summary

The following table defines the errata applicability to available CY8C21X34 family devices. An "X" indicates that the errata pertains to the selected device.

Note Errata items, in the table below, are hyperlinked. Click on any item entry to jump to its description.

Items	Part Number	Silicon Revision	Fix Status
[1]. Internal Main Oscillator (IMO) Tolerance Deviation at Temperature Extremes	CY8C21X34	A	No fix is currently planned.
[2]. I2C Errors	CY8C21X34	A	No fix is currently planned.

1. Internal Main Oscillator (IMO) Tolerance Deviation at Temperature Extremes

■ Problem Definition

Asynchronous Digital Communications Interfaces may fail framing beyond 0 °C to 70 °C. This problem does not affect end-product usage between 0 °C and 70 °C.

■ Parameters Affected

The IMO frequency tolerance. The worst case deviation when operated below 0 °C and above +70 °C and within the upper and lower datasheet temperature range is ±5%.

■ Trigger Condition(S)

The asynchronous Rx/Tx clock source IMO frequency tolerance may deviate beyond the datasheet limit of ±2.5% when operated beyond the temperature range of 0 °C to +70 °C.

■ Scope of Impact

This problem may affect UART, IrDA, and FSK implementations.

■ Workaround

Implement a quartz crystal stabilized clock source on at least one end of the asynchronous digital communications interface.

■ Fix Status

No fix is currently planned.

2. I²C Errors

■ Problem Definition

The I²C block exhibits occasional data and bus corruption errors when the I²C master initiates transactions while the device is transitioning in to or out of sleep mode.

■ Parameters Affected

Affects reliability of I²C communication to device, between I²C master, and third party I²C slaves.

■ Trigger Condition(S)

Triggered by transitions into and out of the device's sleep mode.

■ Scope of Impact

This problem may affect UART, IrDA, and FSK implementations.

■ Workaround

Firmware workarounds are available in firmware. Generally the workaround consists of disconnecting the I²C block from the bus prior to going to sleep modes. I²C transactions during sleep are supported by a protocol in which the master wakes the device prior to the I²C transaction

■ Fix Status

Will not be fixed.

Document History Page

Document Title: CY8C21634/CY8C21534/CY8C21434/CY8C21334/CY8C21234, PSoC [®] Programmable System-on-Chip [™] Document Number: 38-12025			
Rev.	ECN	Submission Date	Description of Change
**	227340	05/20/2004	New silicon and document (Revision **).
*A	235992	06/22/2004	Added 28-pin SSOP package related information in all instances across the document. Updated Register Reference : Updated Register Mapping Tables : Updated Table 3 . Updated Table 4 . Updated Packaging Information : Added spec 51-85079 *C. Updated Ordering Information : Updated part numbers.
*B	248572	08/10/2004	Updated Document Title to read as "CY8C21234/CY8C21334/CY8C21434/CY8C21534/CY8C21634, PSoC Mixed Signal Array". Added CY8C21534, CY8C21634 part related information in all instances across the document. Updated Logic Block Diagram (Added SMP Block). Update Pin Information : Updated 28-Pin Part Pinout: Replaced CY8C21434 with CY8C21534 in figure 28-pin SSOP. Updated details in "Name" and "Description" columns corresponding to pin 9. Update Electrical Specifications : Updated DC Electrical Characteristics : Updated DC Chip-Level Specifications : Updated Table 5 . Removed "DC Analog Reference Specifications". Removed "DC Analog PSoC Block Specifications". Updated DC Analog Mux Bus Specifications : Replaced "DC Multiplexer Specifications" with "DC Analog Mux Bus Specifications" in heading. Updated Ordering Information : Updated part numbers.
*C	277832	10/25/2004	Changed status from Preliminary to Final. Updated PSoC Functional Overview : Updated PSoC Device Characteristics : Updated Table 1 . Update Pin Information : Updated 16-Pin Part Pinout: Updated details in "Description" column; and also updated diagram. Updated 20-Pin Part Pinout: Updated details in "Description" column; and also updated diagram. Updated 28-Pin Part Pinout: Updated details in "Description" column; and also updated diagram. Updated 32-Pin Part Pinout: Updated details in "Description" column; and also updated diagram. Update Electrical Specifications : Updated AC Electrical Characteristics : Updated AC Chip-Level Specifications : Removed figure "PLL Lock Timing Diagram". Removed figure "PLL Lock for Low Gain Setting Timing Diagram". Verified data sheet standards (from SFV memo).
*D	285293	11/03/2004	Update Electrical Specifications : Updated DC Electrical Characteristics : Updated DC General-Purpose I/O Specifications : Updated Table 7 . Updated Packaging Information : No change in revisions. Added Solder Reflow Specifications .

Document History Page (continued)

Document Title: CY8C21634/CY8C21534/CY8C21434/CY8C21334/CY8C21234, PSoC® Programmable System-on-Chip™ Document Number: 38-12025			
Rev.	ECN	Submission Date	Description of Change
*E	301739	12/21/2004	Update hyperlinks across the document (with reference tto new CY.com Portal). Update Electrical Specifications : Updated DC Electrical Characteristics : Updated DC Chip-Level Specifications : Updated Table 5 .
*F	329104	03/14/2005	Updated Features : Updated description (Replaced “Two 8-Bit 28 Channel ADCs” with “Single or Dual 8-Bit 28 Channel ADC”). Updated Register Reference : Updated Register Mapping Tables : Updated Table 3 . Updated Table 4 . Update Pin Information : Updated 16-Pin Part Pinout: Updated details in “Description” column. Updated 20-Pin Part Pinout: Updated details in “Description” column. Updated 28-Pin Part Pinout: Updated details in “Description” column. Updated 32-Pin Part Pinout: Updated details in “Description” column. Updated Electrical Specifications : Updated almost entire section. Updated Packaging Information : No change in revisions. Add 32-pin MLF E-Pad dimensions at the bottom of spec 51-85188 **. Updated Thermal Impedances : Updated Table 29 (Add “Typical ThetaJC” column). Updated Solder Reflow Specifications : Updated Table 30 (Updated details under “Minimum Peak Temperature” corresponding to 16-pin SOIC and 32-pin MLF packages). Updated Ordering Information : No changed in part numbers. Replaced “300-Mil” with “210-Mil” in “Package” column corresponding to 20-pin SSOP. Updated to Cypress template.
*G	352736	04/20/2005	Updated Electrical Specifications : Updated AC Electrical Characteristics : Updated AC Digital Block Specifications : Updated Table 21 (Updated details corresponding to Transmitter and Receiver function). Updated Packaging Information : No change in revisions. Added “Important Note” below spec 51-85188 **. Updated to new template.
*H	390152	08/03/2005	Updated Pin Information : Updated 32-Pin Part Pinout: Updated Note below the table (MLF thermal pad connection info). Updated Packaging Information : Removed spec 51-85022 *B. Added spec 51-85068 *B.
*I	413404	12/15/2005	Updated Packaging Information : spec 51-85188 – Changed revision from ** to *A. Updated to new template.

Document Title: CY8C21634/CY8C21534/CY8C21434/CY8C21334/CY8C21234, PSoC® Programmable System-on-Chip™ Document Number: 38-12025			
Rev.	ECN	Submission Date	Description of Change
*J	430185	03/17/2006	Add 32-pin QFN (5 × 5 × 0.60 mm) package related information in all instances across the document. Updated Absolute Maximum Ratings : Updated value under “Typ” column and also details under “Notes” column corresponding to T _{STG} parameter. Updated Packaging Information : Added spec 001-06392 **. Updated Thermal Impedances : Added details corresponding to 32-pin QFN 5x5 mm 0.60 MAX package. Retained existing details of 32-pin QFN for 32-pin QFN 5x5 mm 0.93 MAX package. Updated Ordering Information : Updated part numbers. Updated to new template.
*K	677717	01/12/2007	Updated PSoC Functional Overview : Updated PSoC Device Characteristics : Updated Table 1 (Added CY8C20x34 and its corresponding details; added Note 7 and referred the same note in Analog Blocks column corresponding to CY8C20x34). Updated Getting Started : Updated Technical Training Modules: Updated description. Updated Electrical Specifications : Updated DC Electrical Characteristics : Added “DC Low Power Comparator Specifications”. Updated AC Electrical Characteristics : Added “AC Low Power Comparator Specifications”. Updated Packaging Information : spec 001-06392 – Changed revision from ** to *A. Added Development Tool Selection .
*L	2147847	02/27/2008	Add 32-pin QFN (Sawn) Package related information in all instances across the document. Updated Packaging Information : spec 51-85188 – Changed revision from *A to *B. Added spec 001-30999 **. Updated Ordering Information : Updated part numbers. Updated to new template.
*M	2273246	04/01/2008	Updated Ordering Information : Updated part numbers. Updated Packaging Information : Added spec 001-42168 *A.
*N	2618124	12/09/2008	Updated Document Title to read as “CY8C21234/CY8C21334/CY8C21434/CY8C21534/CY8C21634 PSoC® Programmable System-on-Chip™”. Updated Ordering Information : No changed in part numbers. Added Note “For Die sales information, contact a local Cypress sales office or Field Applications Engineer (FAE).” below the table.

Rev.	ECN	Submission Date	Description of Change
*O	2684145	04/06/2009	Updated Getting Started : Updated description. Added Application Notes : Updated description. Updated Development Kits : Updated description. Updated Training : Replaced "Technical Training Modules" with "Training" in heading; and also updated description. Updated CYPros Consultants : Replaced "Consultants" with "CYPros Consultants" in heading; and also updated description. Added Solutions Library . Updated Technical Support : Updated description. Updated Development Tools : Updated description; and also removed figure "PSoC Designer Subsystems". Updated PSoC Designer Software Subsystems : Removed "Device Editor". Removed "Design Browser". Added "System-Level View". Added "Chip-Level View". Added "Hybrid Designs". Updated Code Generation Tools : Replaced "Application Editor" with "Code Generation Tools" in heading; and also updated description. Removed "Designing with User Modules". Added Designing with PSoC Designer . Updated Ordering Information : No changed in part numbers. Updated details in "Package" column corresponding to CY8C21434-24LTXI and CY8C21434-24LTXIT.
*P	2693024	04/16/2009	Updated Packaging Information : spec 51-85188 – Changed revision from *B to *C. Removed spec 001-42168 *C. Added spec 001-48913 *A.
*Q	2720594	06/22/2009	Removed "Mixed-Signal Array" related information in all instances across the document. Updated Packaging Information : No change in revisions. Updated figure caption only corresponding to spec 001-44368 *A. Updated Development Tool Selection : Updated Software : Updated PSoC Designer™ : Updated description. Updated PSoC Programmer : Updated description. Updated Development Kits : Removed "CY3210-ExpressDK PSoC Express Development Kit".

Rev.	ECN	Submission Date	Description of Change
*R	2762499	09/11/2009	Updated Electrical Specifications : Updated DC Electrical Characteristics : Updated DC General-Purpose I/O Specifications : Updated Table 6 (Added I _{OH} , I _{OL} parameters and their corresponding details). Updated Table 7 (Added I _{OH} , I _{OL} parameters and their corresponding details). Updated DC Programming Specifications : Updated Table 14 (Added Note 25 and referred the same note in minimum value of Flash _{ENPB} parameter). Updated AC Electrical Characteristics : Updated AC Chip-Level Specifications : Updated Table 16 (Added DC _{ILO} , F _{32K_U} , SR _{POWERUP} , T _{POWERUP} parameters and their corresponding details; removed T _{RAMP} parameter and its corresponding details; updated details in "Min", "Typ" and "Max" columns corresponding to F _{IMO6} parameter). Updated Table 17 (Added DC _{ILO} , F _{32K_U} , SR _{POWERUP} , T _{POWERUP} parameters and their corresponding details; removed T _{RAMP} parameter and its corresponding details; updated details in "Min", "Typ" and "Max" columns corresponding to F _{IMO6} parameter). Updated AC Programming Specifications : Updated Table 26 (Added T _{ERASEALL} , T _{PROGRAM_HOT} , and T _{PROGRAM_COLD} parameters and their corresponding details; updated details in "Typ" column corresponding to T _{WRITE} parameter).
*S	2900687	03/30/2010	Updated PSoC Functional Overview : Updated The Analog System : Updated The Analog Multiplexer System : Updated description. Updated Absolute Maximum Ratings : Added T _{BAKETEMP} , T _{BAKETIME} parameters and their corresponding details. Updated Electrical Specifications : Updated DC Electrical Characteristics : Removed "DC Low Power Comparator Specifications". Updated AC Electrical Characteristics : Updated AC Chip-Level Specifications : Updated Table 16 . Removed "AC Low Power Comparator Specifications". Removed "AC Analog Mux Bus Specifications". Updated Packaging Information : Updated Important Note below heading. spec 51-85068 – Changed revision from *B to *C. spec 51-85077 – Changed revision from *C to *D. spec 51-85079 – Changed revision from *C to *D. Removed spec 001-06392 *A. spec 51-85188 – Changed revision from *C to *D. spec 001-44368 – Changed revision from *A to *B. spec 001-48913 – Changed revision from *A to *B. spec 001-30999 – Changed revision from *B to *C. spec 51-85062 – Changed revision from *C to *D. Updated Thermal Impedances : Updated Table 29 (Added 56-pin SSOP package related information). Updated Solder Reflow Specifications : Updated Table 30 (Added 56-pin SSOP package related information). Updated Development Tool Selection : Removed "Third Party Tools". Removed "Build a PSoC Emulator into your Board". Updated Ordering Information : Updated part numbers. Updated Ordering Code Definitions . Updated to new template.
*T	2937578	05/26/2010	Updated to new template.

Document Title: CY8C21634/CY8C21534/CY8C21434/CY8C21334/CY8C21234, PSoC® Programmable System-on-Chip™ Document Number: 38-12025			
Rev.	ECN	Submission Date	Description of Change
*U	3005573	09/02/2010	Updated PSoC Functional Overview : Updated PSoC Device Characteristics : Updated Table 1 . Updated Electrical Specifications : Updated DC Electrical Characteristics : Added DC I2C Specifications . Updated AC Electrical Characteristics : Updated AC Chip-Level Specifications : Updated Table 16 : Added values in "Max" column corresponding to F_{32K_U} parameter. Removed Jitter24M1 parameter and its corresponding details. Added T_{jit_IMO} parameter and its corresponding details. Updated Table 17 : Removed Jitter32k parameter and its corresponding details. Added T_{jit_IMO} parameter and its corresponding details. Updated AC Digital Block Specifications : Updated Table 21 (for clearer understanding). Updated Table 22 (for clearer understanding). Updated AC I2C [40] Specifications : Updated Figure 15 (for clearer understanding). Updated Packaging Information : No change in revisions. Updated Solder Reflow Specifications : Updated Table 30 (Removed "Minimum Peak Temperature" column and added "Time at Maximum Temperature" column). Added Reference Documents . Added Glossary . Updated to new template.
*V	3068269	10/21/2010	Updated Ordering Information : Updated part numbers.
*W	3281271	08/23/2011	Updated Electrical Specifications : Updated AC Electrical Characteristics : Updated AC Operational Amplifier Specifications : Updated Table 20 (Replaced " $2.4\text{ V} < V_{CC} < 3.0\text{ V}$ " with " $2.4\text{ V} < V_{DD} < 3.0\text{ V}$ " under "Notes" column). Updated Packaging Information : spec 51-85077 – Changed revision from *D to *E. spec 51-85079 – Changed revision from *D to *E. Removed spec 51-85188 *D. Updated Solder Reflow Specifications : Under Table 30 (Removed "Time at Maximum Temperature" column and added "Maximum Time above $T_C - 5\text{ }^{\circ}\text{C}$ " column). Completing Sunset Review.
*X	3383568	10/05/2011	Updated Pin Information : Updated CY8C21001 56-pin SSOP Pin Definitions on page 15 : Updated details in "Description" column of NC pin (Included the text "Pin must be left floating"). Updated Packaging Information : spec 51-85068 – Changed revision from *C to *D. spec 51-85062 – Changed revision from *D to *E. Updated Ordering Information : Updated part numbers.
*Y	3659297	07/26/2012	Updated Packaging Information : Removed spec 001-44368 *B. Completing Sunset Review.

Document Title: CY8C21634/CY8C21534/CY8C21434/CY8C21334/CY8C21234, PSoC® Programmable System-on-Chip™ Document Number: 38-12025			
Rev.	ECN	Submission Date	Description of Change
*Z	3902039	02/12/2013	Updated Electrical Specifications : Updated AC Electrical Characteristics : Updated AC Chip-Level Specifications : Updated Table 16 (Changed minimum value of F _{IMO6} parameter from 5.5 MHz to 5.52 MHz, changed maximum value of F _{IMO6} parameter from 6.5 MHz to 6.48 MHz). Updated Table 17 (Changed minimum value of F _{IMO12} parameter from 11.5 MHz to 11.04 MHz, changed maximum value of F _{IMO12} parameter from 12.7 MHz to 12.96 MHz, changed minimum value of F _{IMO6} parameter from 5.5 MHz to 5.52 MHz, changed maximum value of F _{IMO6} parameter from 6.5 MHz to 6.48 MHz). Updated Packaging Information : spec 51-85068 – Changed revision from *D to *E. spec 001-30999 – Changed revision from *C to *D. spec 001-48913 – Changed revision from *B to *C. spec 51-85062 – Changed revision from *E to *F.
AA	3993249	05/07/2013	Added Errata .
AB	4076892	07/25/2013	Added Errata footnotes (Notes 1, 2, 3, 4, 5, 8, 28, 33, 40). Updated Features : Added Note 1 and referred in “Internal ±2.5% 24- / 48-MHz main oscillator”. Added Note 2 and referred in “I ² C” under “Additional system resources”. Updated PSoC Functional Overview : Updated The PSoC Core : Added Note 3 and referred in “24 MHz”. Added Note 4 and referred in “I ² C” under “System resources provide these additional capabilities”. Updated The Digital System : Added Note 4 and referred in “I ² C slave and multi-master”. Updated Additional System Resources : Added Note 5 and referred in “I ² C”. Updated Development Tools : Added Note 8 and referred in “I ² C” under “Built-in support for communication interfaces”. Updated Electrical Specifications : Updated AC Electrical Characteristics : Updated AC Chip-Level Specifications : Updated Table 16 (Added Note 28 and referred in “F _{IMO24} ” and “F _{IMO6} ” parameters). Updated Table 17 (Added Note 33 and referred in “F _{IMO12} ” and “F _{IMO6} ” parameters). Updated AC I2C [40] Specifications : Added Note 40 and referred in the heading. Updated to new template. Completing Sunset Review.
AC	4143112	10/01/2013	Updated Packaging Information : spec 001-48913 – Changed revision from *C to *D. Updated Ordering Information : Updated part numbers. Updated Reference Documents : Removed references of spec 001-14503 and spec 001-17397 (as these specs are obsolete).

Document Title: CY8C21634/CY8C21534/CY8C21434/CY8C21334/CY8C21234, PSoC® Programmable System-on-Chip™ Document Number: 38-12025			
Rev.	ECN	Submission Date	Description of Change
AD	4338103	04/15/2014	Updated Pin Information : Updated CY8C21234 16-pin SOIC Pin Definitions (corresponding to CY8C21234): Added Note 9 and referred the same note in the description of pin 6 and pin 8. Updated CY8C21334 20-pin SSOP Pin Definitions (corresponding to CY8C21334): Added Note 11 and referred the same note in the description of pin 5 and pin 10. Updated CY8C21534 28-pin SSOP Pin Definitions (corresponding to CY8C21534): Added Note 13 and referred the same note in the description of pin 9 and pin 14. Updated CY8C21434/CY8C21634 32-pin QFN Pin Definitions (corresponding to CY8C21434/CY8C21634): Added Note 16 and referred the same note in the description of pin 7, pin 12 and pin 32. Updated CY8C21001 56-pin SSOP Pin Definitions (corresponding to CY8C21001): Added Note 18 and referred the same note in the description of pin 17, pin 18 and pin 28. Updated Packaging Information : Updated "Important Note" below Figure 19 . Updated Thermal Impedances : Updated Note 43 referred in Table 29 .
AE	4531967	10/10/2014	Added More Information . Added PSoC Designer .
AF	4593771	12/11/2014	Updated Pin Information : Updated CY8C21001 56-pin SSOP Pin Definitions : Referred Note 18 in description of pin 1. Updated Packaging Information : spec 51-85077 – Changed revision from *E to *F. spec 51-85079 – Changed revision from *E to *F.
AG	4670626	02/25/2015	Updated Errata : Replaced CY8C21234 with CY8C21X34 in all instances.
AH	5394304	08/08/2016	Updated to new template. Completing Sunset Review.
AI	5766165	06/07/2017	Updated Cypress Logo and Copyright.
AJ	6641806	07/31/2019	Updated Packaging Information : spec 51-85068 – Changed revision from *E to *F. spec 001-48913 – Changed revision from *D to *E. Updated to new template. Completing Sunset Review.

This document, including any software or firmware included or referenced in this document ("Software"), is owned by Cypress under the intellectual property laws and treaties of the United States and other countries worldwide. Cypress reserves all rights under such laws and treaties and does not, except as specifically stated in this paragraph, grant any license under its patents, copyrights, trademarks, or other intellectual property rights. If the Software is not accompanied by a license agreement and you do not otherwise have a written agreement with Cypress governing the use of the Software, then Cypress hereby grants you a personal, non-exclusive, nontransferable license (without the right to sublicense) (1) under its copyright rights in the Software (a) for Software provided in source code form, to modify and reproduce the Software solely for use with Cypress hardware products, only internally within your organization, and (b) to distribute the Software in binary code form externally to end users (either directly or indirectly through resellers and distributors), solely for use on Cypress hardware product units, and (2) under those claims of Cypress's patents that are infringed by the Software (as provided by Cypress, unmodified) to make, use, distribute, and import the Software solely for use with Cypress hardware products. Any other use, reproduction, modification, translation, or compilation of the Software is prohibited.

TO THE EXTENT PERMITTED BY APPLICABLE LAW, CYPRESS MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS DOCUMENT OR ANY SOFTWARE OR ACCOMPANYING HARDWARE, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. No computing device can be absolutely secure. Therefore, despite security measures implemented in Cypress hardware or software products, Cypress shall have no liability arising out of any security breach, such as unauthorized access to or use of a Cypress product. CYPRESS DOES NOT REPRESENT, WARRANT, OR GUARANTEE THAT CYPRESS PRODUCTS, OR SYSTEMS CREATED USING CYPRESS PRODUCTS, WILL BE FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION (collectively, "Security Breach"). Cypress disclaims any liability relating to any Security Breach, and you shall and hereby do release Cypress from any claim, damage, or other liability arising from any Security Breach. In addition, the products described in these materials may contain design defects or errors known as errata which may cause the product to deviate from published specifications. To the extent permitted by applicable law, Cypress reserves the right to make changes to this document without further notice. Cypress does not assume any liability arising out of the application or use of any product or circuit described in this document. Any information provided in this document, including any sample design information or programming code, is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. "High-Risk Device" means any device or system whose failure could cause personal injury, death, or property damage. Examples of High-Risk Devices are weapons, nuclear installations, surgical implants, and other medical devices. "Critical Component" means any component of a High-Risk Device whose failure to perform can be reasonably expected to cause, directly or indirectly, the failure of the High-Risk Device, or to affect its safety or effectiveness. Cypress is not liable, in whole or in part, and you shall and hereby do release Cypress from any claim, damage, or other liability arising from any use of a Cypress product as a Critical Component in a High-Risk Device. You shall indemnify and hold Cypress, its directors, officers, employees, agents, affiliates, distributors, and assigns harmless from and against all claims, costs, damages, and expenses, arising out of any claim, including claims for product liability, personal injury or death, or property damage arising from any use of a Cypress product as a Critical Component in a High-Risk Device. Cypress products are not intended or authorized for use as a Critical Component in any High-Risk Device except to the limited extent that (i) Cypress's published data sheet for the product explicitly states Cypress has qualified the product for use in a specific High-Risk Device, or (ii) Cypress has given you advance written authorization to use the product as a Critical Component in the specific High-Risk Device and you have signed a separate indemnification agreement.
