# VLS252010CX-1 type

#### L FREQUENCY CHARACTERISTICS

Product No.	Manufacturer
4294A	Keysight Technologies

#### ■INDUCTANCE VS. DC BIAS CHARACTERISTICS

A Please be sure to request delivery specifications that provide further details on the features and specifications of the products for proper and safe use. Please note that the contents may change without any prior notice due to reasons such as upgrading. (2/4)20180709

### INDUCTORS

# VLS252010CX-1 type

#### SHAPE & DIMENSIONS

Dimensions in mm

#### PACKAGING STYLE

#### REEL DIMENSIONS

Dimensions in mm

#### TAPE DIMENSIONS

#### RECOMMENDED LAND PATTERN

RECOMMENDED REFLOW PROFILE

Dimensions in mm

Туре	А	В	К
VLS252010CX-1	2.3±0.1	2.8±0.1	1.15±0.1

#### **PACKAGE QUANTITY**

Please be sure to request delivery specifications that provide further details on the features and specifications of the products for proper and safe use.

## **REMINDERS FOR USING THESE PRODUCTS**

Before using these products, be sure to request the delivery specifications.

## SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products.

<ul> <li>The storage period is less than 12 months. Be sure to follow the storage conditions (temperature: 5 to 40°C, humidity: 10 to 75% RH less). If the storage period elapses, the soldering of the terminal electrodes may deteriorate.</li> <li>Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.).</li> <li>Before soldering, be sure to preheat components. The preheating temperature should be set so that the temperature difference between the solder temperature and chip temperatudes not exceed 150°C.</li> <li>Soldering corrections after mounting should be within the range of the conditions determined in the specifications. If overheated, a short circuit, performance deterioration, or lifespan shortening may occur.</li> <li>When embedding a printed circuit board where a chip is mounted to a set, be sure that residual stress is not given to the chip due the overall distortion of the printed circuit board and partial distortion such as at screw tightening portions.</li> <li>Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set therr design.</li> <li>Carefully lay out the coil for the circuit board design of the non-magnetic shield type. A malfunction may occur due to magnetic interference.</li> <li>Use a wrist band to discharge static electricity in your body through the grounding wire.</li> <li>Do not use for a purpose outside of the contents regulated in the delivery specifications.</li> <li>The products listed on this catalog are intended for use in general electronic equipment, AV equipment, telecommunications equiment, industrial robots) under a normal operation and use condition.</li> <li>The products are not designed or warranted to meet the requirements of the applications listed below, whose performance and/or quity require a more stringent level of safety or reliability, or whose failure, malfunction or trouble could cause serious damage to socid.</li> </ul>
