1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings(†)

VCC...6.5V

All inputs and outputs w.r.t. VSS .... -0.6V to VCC +1.0V

Storage temperature ....-65°C to 150°C

Ambient temperature under bias ....-40°C to 125°C

ESD protection on all pins ....4 kV

† NOTICE**:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for an extended period of time may affect device reliability.

2.0 FUNCTIONAL DESCRIPTION

2.1 Principles of Operation

The 25XX040A is a 512-byte Serial EEPROM designed to interface directly with the Serial Peripheral Interface (SPI) port of many of today's popular microcontroller families, including Microchip's PIC® microcontrollers. It may also interface with microcontrollers that do not have a built-in SPI port by using discrete I/O lines programmed properly in firmware to match the SPI protocol.

The 25XX040A contains an 8-bit instruction register. The device is accessed via the SI pin, with data being clocked in on the rising edge of SCK. The CS pin must be low and the HOLD pin must be high for the entire operation.

Table 2-1 contains a list of the possible instruction bytes and format for device operation. All instructions, addresses and data are transferred MSb first, LSb last.

Data (SI) is sampled on the first rising edge of SCK after CS goes low. If the clock line is shared with other peripheral devices on the SPI bus, the user can assert the HOLD input and place the 25XX040A in 'HOLD' mode. After releasing the HOLD pin, operation will resume from the point when the HOLD was asserted.

2.2 Read Sequence

The device is selected by pulling CS low. The 8-bit `READ` instruction is transmitted to the 25XX040A followed by a 9-bit address. The MSb (A8) is sent to the slave during the instruction sequence. See Figure 2-1 for more details.

After the correct `READ` instruction and address are sent, the data stored in the memory at the selected address is shifted out on the SO pin. Data stored in the memory at the next address can be read sequentially by continuing to provide clock pulses to the slave. The internal Address Pointer is automatically incremented to the next higher address after each byte of data is shifted out. When the highest address is reached (1FFh), the address counter rolls over to address 000h allowing the read cycle to be continued indefinitely. The read operation is terminated by raising the CS pin (Figure 2-1).

2.3 Write Sequence

Prior to any attempt to write data to the 25XX040A, the write enable latch must be set by issuing the `WREN` instruction (Figure 2-4). This is done by setting CS low and then clocking out the proper instruction into the 25XX040A. After all eight bits of the instruction are transmitted, CS must be driven high to set the write enable latch.

If the write operation is initiated immediately after the `WREN` instruction without CS driven high, data will not be written to the array since the write enable latch was not properly set.

After setting the write enable latch, the user may proceed by driving CS low, issuing a `WRITE` instruction, followed by the remainder of the address, and then the data to be written. Keep in mind that the Most Significant address bit (A8) is included in the instruction byte for the 25XX040A. Up to 16 bytes of data can be sent to the device before a write cycle is necessary. The only restriction is that all of the bytes must reside in the same page. Additionally, a page address begins with `'XXXX 0000'` and ends with `'XXXX 1111'`. If the internal address counter reaches `'XXXX 1111'` and clock signals continue to be applied to the chip, the address counter will roll back to the first address of the page and over-write any data that previously existed in those locations.

Note: Page write operations are limited to writing bytes within a single physical page, **regardless** of the number of bytes actually being written. Physical page boundaries start at addresses that are integer multiples of the page buffer size (or 'page size') and, end at addresses that are integer multiples of page size – 1. If a Page Write command attempts to write across a physical page boundary, the result is that the data wraps around to the beginning of the current page (overwriting data previously stored there), instead of being written to the next page as might be expected. It is therefore necessary for the application software to prevent page write operations that would attempt to cross a page boundary.

For the data to be actually written to the array, the CS must be brought high after the Least Significant bit (D0) of the n^{th} data byte has been clocked in. If CS is driven high at any other time, the write operation will not be completed. Refer to Figure 2-2 and Figure 2-3 for more detailed illustrations on the byte write sequence and the page write sequence, respectively. While the write is in progress, the STATUS register may be read to check the status of the WPEN, WIP, WEL, BP1 and BP0 bits (Figure 2-6). Attempting to read a memory array location will not be possible during a write cycle. Polling the WIP bit in the STATUS register is recommended in order to determine if a write cycle is in progress. When the write cycle is completed, the write enable latch is reset.

BLOCK DIAGRAM

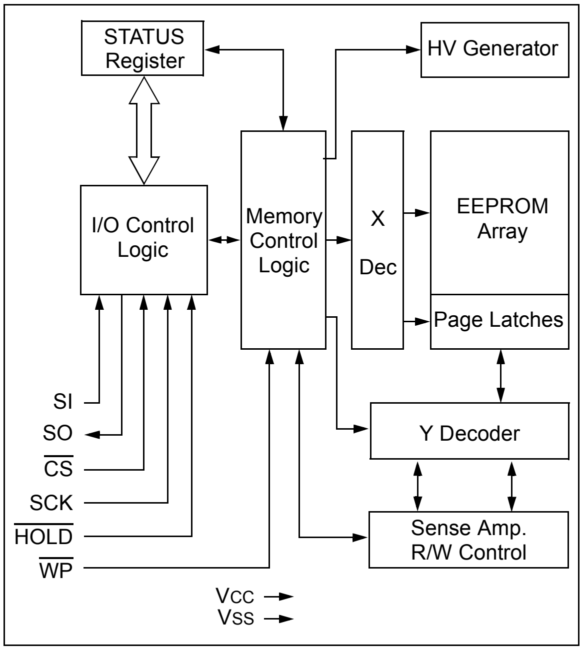

TABLE 2-1: INSTRUCTION SET

Instruction Name	Instruction Format	Description
`READ`	`0000` A_8`011`	Read data from memory array beginning at selected address
`WRITE`	`0000` A_8`010`	Write data to memory array beginning at selected address
`WRDI`	`0000 x100`	Reset the write enable latch (disable write operations)
`WREN`	`0000 x110`	Set the write enable latch (enable write operations)
`RDSR`	`0000 x101`	Read STATUS register
`WRSR`	`0000 x001`	Write STATUS register

Note: A_8 is the 9th address bit, which is used to address the entire 512 byte array.

`x` = don't care.

FIGURE 2-1: READ SEQUENCE

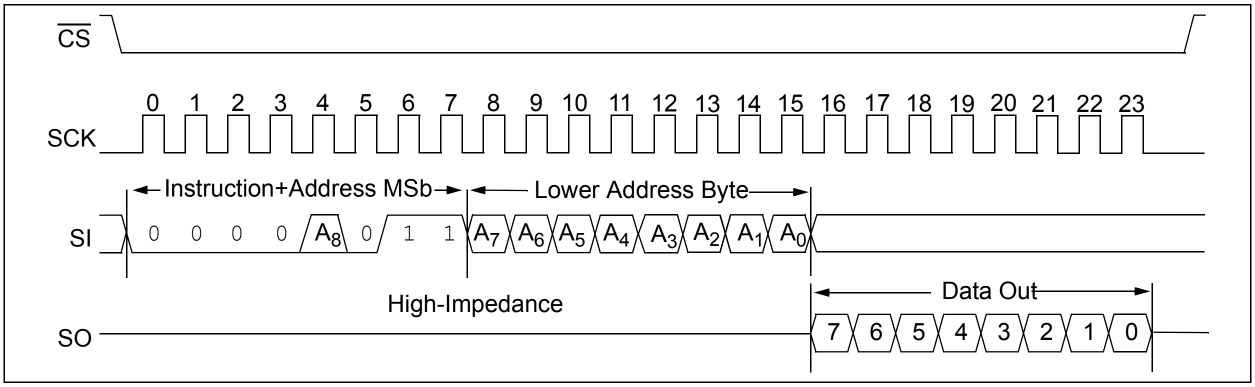

FIGURE 2-2: BYTE WRITE SEQUENCE

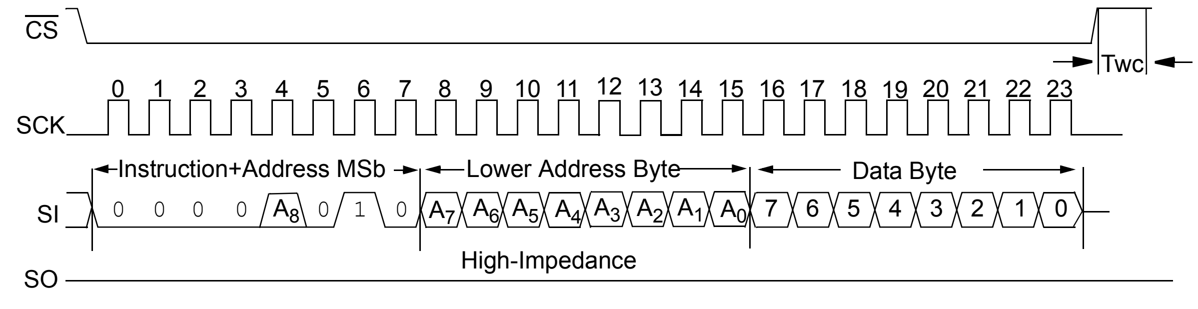

FIGURE 2-3: PAGE WRITE SEQUENCE

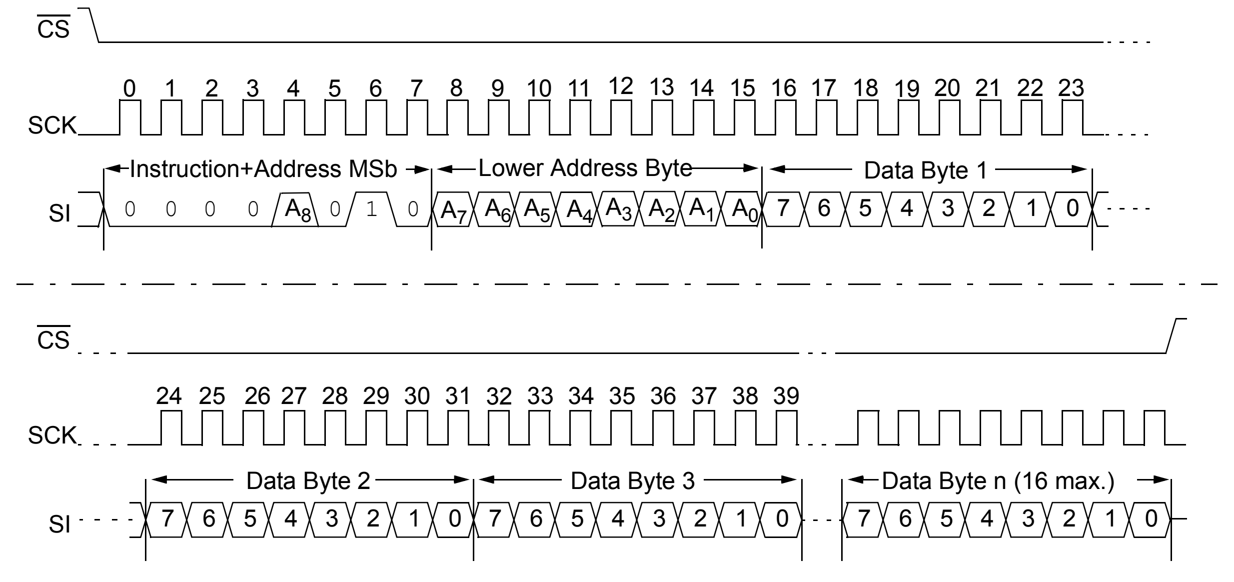

2.4 Write Enable (`WREN`) and Write Disable (`WRDI`)

The 25XX040A contains a write enable latch. See Table 2-4 for the Write-Protect Functionality Matrix. This latch must be set before any write operation will be completed internally. The `WREN` instruction will set the latch, and the `WRDI` will reset the latch.

The following is a list of conditions under which the write enable latch will be reset:

- Power-up
- `WRDI` instruction successfully executed
- `WRSR` instruction successfully executed
- `WRITE` instruction successfully executed
- $\overline{\text{WP}}$ pin is brought low

FIGURE 2-4: WRITE ENABLE SEQUENCE (`WREN`)

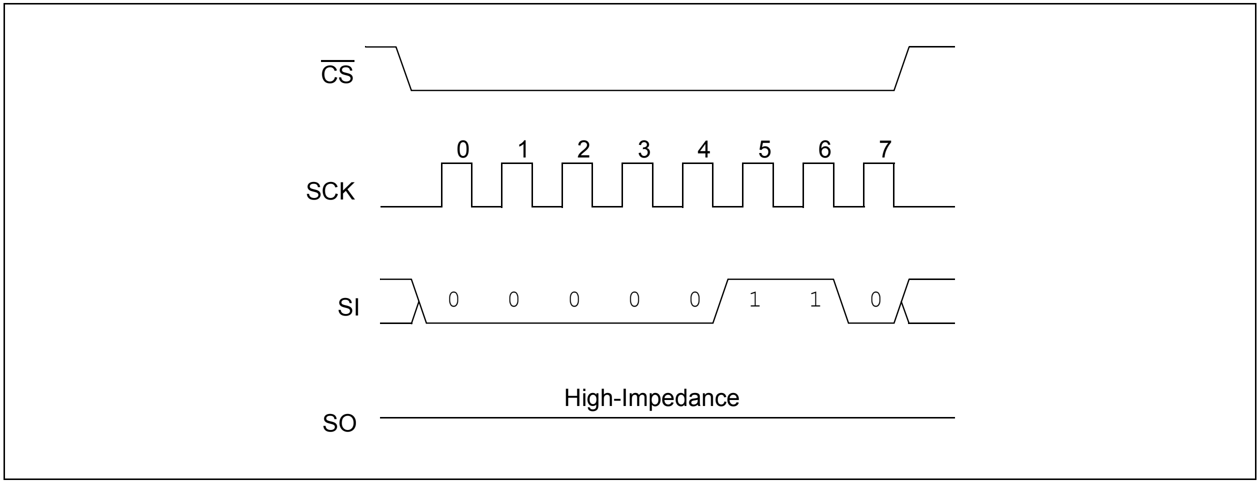

FIGURE 2-5: WRITE DISABLE SEQUENCE (`WRDI`)

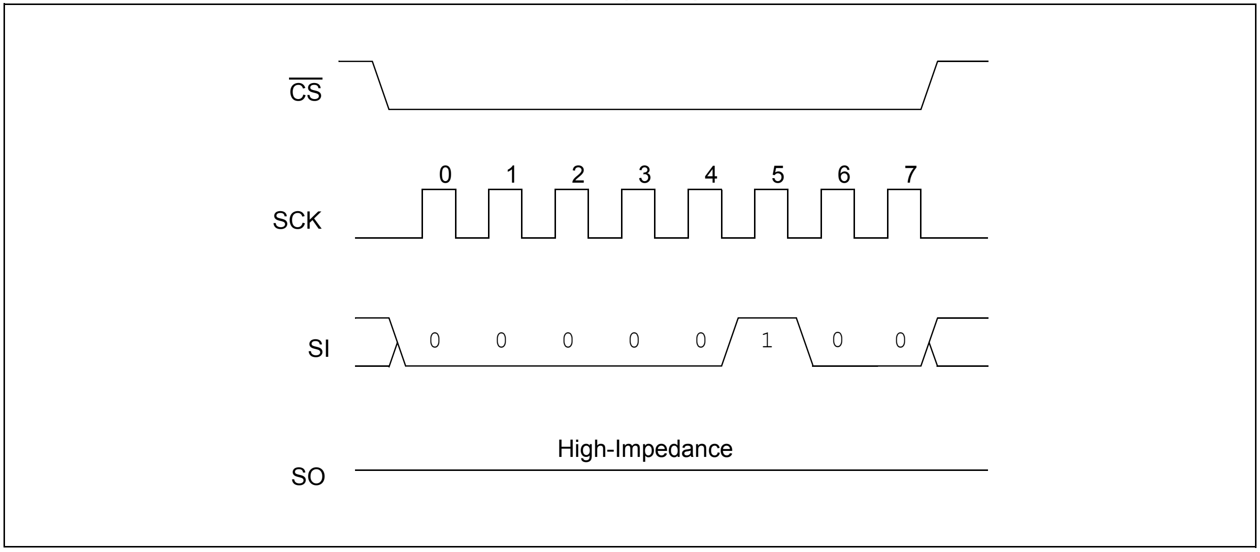


2.5 Read Status Register Instruction (`RDSR`)

The Read Status Register instruction (`RDSR`) provides access to the STATUS register. See Figure 2-6 for the `RDSR` timing sequence. The STATUS register may be read at any time, even during a write cycle. The STATUS register is formatted as follows:

TABLE 2-2: STATUS REGISTER

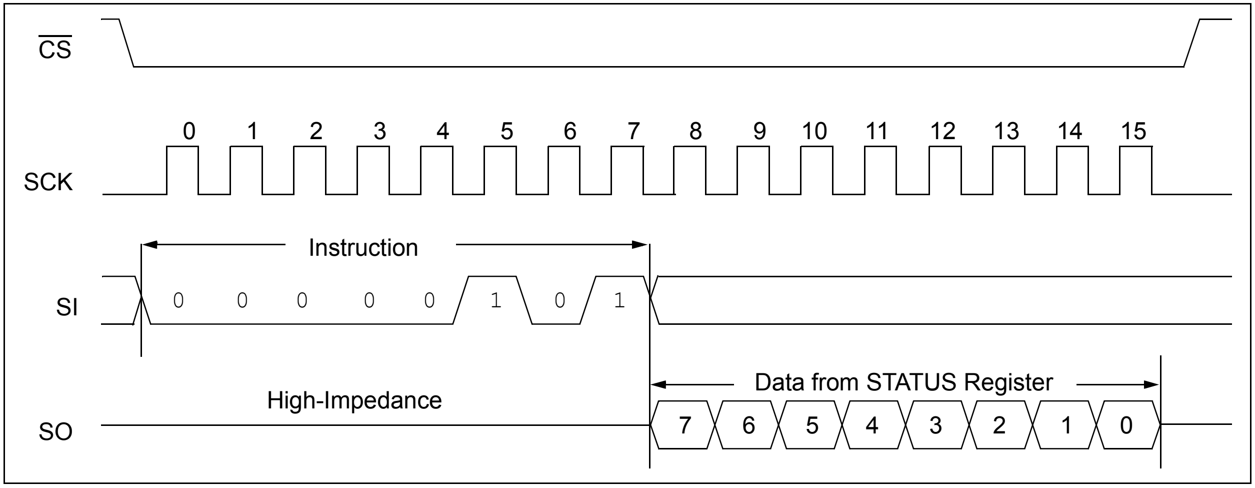
7	6	5	4	3	2	1	0
–	–	–	–	W/R	W/R	R	R
`X`	`X`	`X`	`X`	BP1	BP0	WEL	WIP
W/R = writable/readable. R = read-only.							

The **Write-In-Process (WIP)** bit indicates whether the 25XX040A is busy with a write operation. When set to a '`1`', a write is in progress, when set to a '`0`', no write is in progress. This bit is read-only.

The **Write Enable Latch (WEL)** bit indicates the status of the write enable latch and is read-only. When set to a '`1`', the latch allows writes to the array, when set to a '`0`', the latch prohibits writes to the array. The state of this bit can always be updated via the `WREN` or `WRDI` commands regardless of the state of write protection on the STATUS register. These commands are shown in Figure 2-4 and Figure 2-5.

The **Block Protection (BP0 and BP1)** bits indicate which blocks are currently write-protected. These bits are set by the user issuing the `WRSR` instruction, which is shown in Figure 2-7. These bits are nonvolatile and are described in more detail in Table 2-3.

FIGURE 2-6: READ STATUS REGISTER TIMING SEQUENCE (`RDSR`)



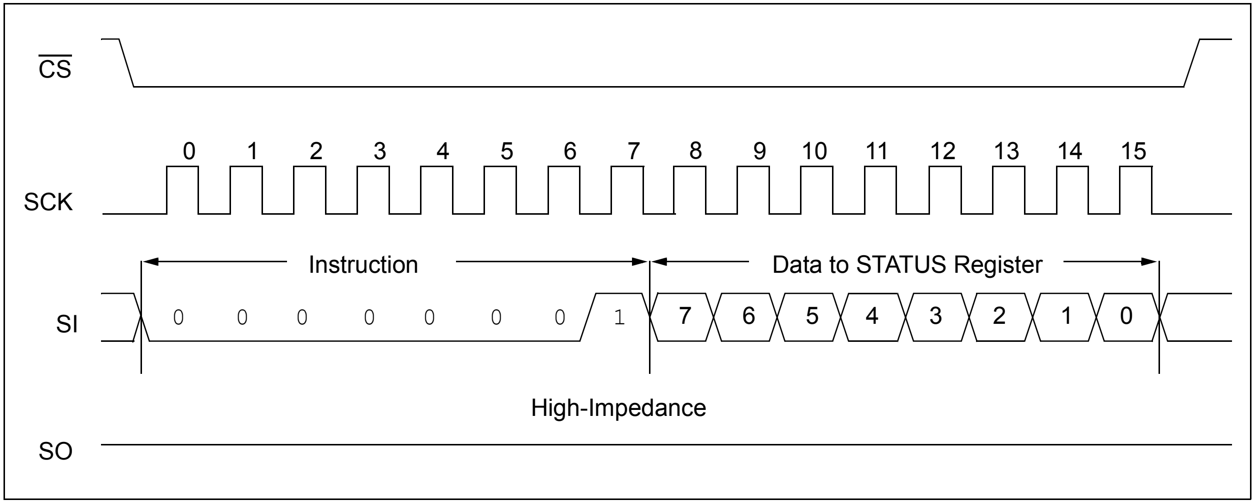
2.6 Write Status Register Instruction (`WRSR`)

The Write Status Register instruction (`WRSR`) allows the user to write to the nonvolatile bits in the STATUS register as shown in Table 2-2. See Figure 2-7 for the `WRSR` timing sequence. Four levels of protection for the array are selectable by writing to the appropriate bits in the STATUS register. The user has the ability to write-protect none, one, two or all four of the segments of the array as shown in Table 2-3.

TABLE 2-3: ARRAY PROTECTION

BP1	BP0	Array Addresses Write-Protected
0	0	none
0	1	upper 1/4 (180h-1FFh)
1	0	upper 1/2 (100h-1FFh)
1	1	all (000h-1FFh)

FIGURE 2-7: WRITE STATUS REGISTER TIMING SEQUENCE (`WRSR`)



Note: An internal write cycle (TWC) is initiated on the rising edge of $\overline{CS}$ after a valid write STATUS register sequence.

2.7 Data Protection

The following protection has been implemented to prevent inadvertent writes to the array:

- The write enable latch is reset on power-up
- A write enable instruction must be issued to set the write enable latch
- After a byte write, page write or STATUS register write, the write enable latch is reset
- $\overline{\text{CS}}$ must be set high after the proper number of clock cycles to start an internal write cycle
- Access to the array during an internal write cycle is ignored and programming is continued

2.8 Power-On State

The 25XX040A powers on in the following state:

- The device is in low-power Standby mode ($\overline{\text{CS}}$ = `1`)
- The write enable latch is reset
- SO is in high-impedance state
- A high-to-low-level transition on $\overline{\text{CS}}$ is required to enter active state

TABLE 2-4: WRITE-PROTECT FUNCTIONALITY MATRIX

$\overline{\text{WP}}$ (pin 3)	WEL (SR bit 1)	Protected Blocks	Unprotected Blocks	STATUS Register
`0` (low)	`x`	Protected	Protected	Protected
`1` (high)	`0`	Protected	Protected	Protected
`1` (high)	`1`	Protected	Writable	Writable

`x` = don’t care

3.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in Table 3-1.

TABLE 3-1: PIN FUNCTION TABLE

Name	PDIP	SOIC	MSOP	TSSOP	DFN[(1)]	TDFN[(1)]	Rotated TSSOP	SOT-23	Function
$\overline{\text{CS}}$	1	1	1	1	1	1	3	5	Chip Select Input
SO	2	2	2	2	2	2	4	4	Serial Data Output
$\overline{\text{WP}}$	3	3	3	3	3	3	5	—	Write-Protect Pin
VSS	4	4	4	4	4	4	6	2	Ground
SI	5	5	5	5	5	5	7	3	Serial Data Input
SCK	6	6	6	6	6	6	8	1	Serial Clock Input
$\overline{\text{HOLD}}$	7	7	7	7	7	7	1	—	Hold Input
VCC	8	8	8	8	8	8	2	6	Supply Voltage

Note 1: The exposed pad on the DFN/TDFN packages can be connected to VSS or left floating.

3.1 Chip Select ($\overline{\text{CS}}$)

A low level on this pin selects the device. A high level deselects the device and forces it into Standby mode. However, a programming cycle which is already initiated or in progress will be completed, regardless of the $\overline{\text{CS}}$ input signal. If $\overline{\text{CS}}$ is brought high during a program cycle, the device will go into Standby mode as soon as the programming cycle is complete. When the device is deselected, SO goes to the high-impedance state, allowing multiple parts to share the same SPI bus. A low-to-high transition on $\overline{\text{CS}}$ after a valid write sequence initiates an internal write cycle. After power-up, a low level on $\overline{\text{CS}}$ is required prior to any sequence being initiated.

3.2 Serial Output (SO)

The SO pin is used to transfer data out of the 25XX040A. During a read cycle, data is shifted out on this pin after the falling edge of the serial clock.

3.3 Write-Protect ($\overline{\text{WP}}$)

The $\overline{\text{WP}}$ pin is a hardware write-protect input pin. When it is low, all writes to the array or STATUS registers are disabled, but any other operations function normally. When $\overline{\text{WP}}$ is high, all functions, including nonvolatile writes, operate normally. At any time, when $\overline{\text{WP}}$ is low, the write enable reset latch will be reset and programming will be inhibited. However, if a write cycle is already in progress, $\overline{\text{WP}}$ going low will not change or disable the write cycle. See Table 2-4 for the Write-Protect Functionality Matrix.

3.4 Serial Input (SI)

The SI pin is used to transfer data into the device. It receives instructions, addresses and data. Data is latched on the rising edge of the serial clock.

3.5 Serial Clock (SCK)

The SCK is used to synchronize the communication between a master and the 25XX040A. Instructions, addresses or data present on the SI pin are latched on the rising edge of the clock input, while data on the SO pin is updated after the falling edge of the clock input.

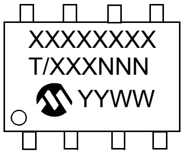
3.6 Hold ($\overline{\text{HOLD}}$)

The $\overline{\text{HOLD}}$ pin is used to suspend transmission to the 25XX040A while in the middle of a serial sequence without having to retransmit the entire sequence again. It must be held high any time this function is not being used. Once the device is selected and a serial sequence is underway, the $\overline{\text{HOLD}}$ pin may be pulled low to pause further serial communication without resetting the serial sequence. The $\overline{\text{HOLD}}$ pin must be brought low while SCK is low, otherwise the HOLD function will not be invoked until the next SCK high-to-low transition. The 25XX040A must remain selected during this sequence. The SI, SCK and SO pins are in a high-impedance state during the time the device is paused and transitions on these pins will be ignored. To resume serial communication, $\overline{\text{HOLD}}$ must be brought high while the SCK pin is low, otherwise serial communication will not resume. Lowering the HOLD line at any time will tri-state the SO line.

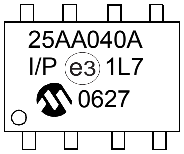
4.0 PACKAGING INFORMATION

4.1 Package Marking Information

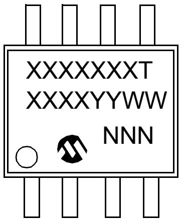
8-Lead PDIP



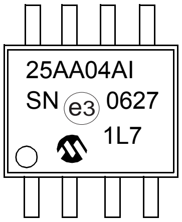
Example:



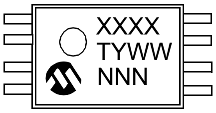
8-Lead SOIC



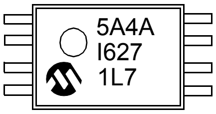
Example:



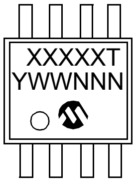
8-Lead TSSOP



Example:



8-Lead MSOP (150 mil)



Example:

8-Lead Plastic Thin Shrink Small Outline (ST) – 4.4 mm Body [TSSOP]

Note: For the most current package drawings, please see the Microchip Packaging Specification located at http://www.microchip.com/packaging

	Units	MILLIMETERS		
	Dimension Limits	MIN	NOM	MAX
Number of Pins	N	8		
Pitch	e	0.65 BSC		
Overall Height	A	–	–	1.20
Molded Package Thickness	A2	0.80	1.00	1.05
Standoff	A1	0.05	–	0.15
Overall Width	E	6.40 BSC		
Molded Package Width	E1	4.30	4.40	4.50
Molded Package Length	D	2.90	3.00	3.10
Foot Length	L	0.45	0.60	0.75
Footprint	L1	1.00 REF		
Foot Angle	φ	0°	–	8°
Lead Thickness	c	0.09	–	0.20
Lead Width	b	0.19	–	0.30

Notes:

1. Pin 1 visual index feature may vary, but must be located within the hatched area.
2. Dimensions D and E1 do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.15 mm per side.
3. Dimensioning and tolerancing per ASME Y14.5M.

   BSC: Basic Dimension. Theoretically exact value shown without tolerances.
   REF: Reference Dimension, usually without tolerance, for information purposes only.

Microchip Technology Drawing C04-086B

8-Lead Plastic Thin Shrink Small Outline (ST) - 4.4 mm Body [TSSOP]

APPENDIX A: REVISION HISTORY

Revision A (9/2003)

Initial Release.

Revision B (12/2003)

Corrections to Section 1.0, Electrical Characteristics.

Revision C (2/2006)

Added Packages SOT-23, DFN and X-rotated TSSOP; Revised AC Char., Params. 9, 10; Revised Package Legend.

Revision D (5/2007)

Removed Preliminary status; Replaced package drawings (Rev. AP); Revise Table 1-1, Param. D004, D007, D008; Revise Table 1-2, Param. 7, 8, 9 ,10.

Revision E (10/2007)

Revised Features (Pb-free); Replaced Package Drawings.

Revision F (7/2009)

Replaced 6-Lead SOT-23 package drawing (from CH to OT); Revised 8-Lead DFN (MC); Added 8-Lead DFN (MC) Land Pattern.

Revision G (11/2011)

Added TDFN Package.

Revision H (12/2012)

Revised Table 1-2, Param. 21.

THE MICROCHIP WEB SITE

Microchip provides online support via our WWW site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at www.microchip.com. Under "Support", click on "Customer Change Notification" and follow the registration instructions.

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support
- Development Systems Information Line

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: http://microchip.com/support

READER RESPONSE

It is our intention to provide you with the best documentation possible to ensure successful use of your Microchip product. If you wish to provide your comments on organization, clarity, subject matter, and ways in which our documentation can better serve you, please FAX your comments to the Technical Publications Manager at (480) 792-4150.

Please list the following information, and use this outline to provide us with your comments about this document.

TO: Technical Publications Manager
RE: Reader Response

Total Pages Sent ________

From: Name ____
Company ____
Address ____
City / State / ZIP / Country ____
Telephone: (_______) _________ - _________

FAX: (______) _________ - _________

Application (optional):

Would you like a reply? ___Y ___N

Device: 25AA040A/25LC040A

Literature Number: DS21827H

Questions:

1. What are the best features of this document?

____

____

2. How does this document meet your hardware and software development needs?

____

____

3. Do you find the organization of this document easy to follow? If not, why?

____

____

4. What additions to the document do you think would enhance the structure and subject?

____

____

5. What deletions from the document could be made without affecting the overall usefulness?

____

____

6. Is there any incorrect or misleading information (what and where)?

____

____

7. How would you improve this document?

PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

PART NO.	**X**	—	**X**	**/XX**
Device	**Tape & Reel**		**Temperature**	**Package**

Device:	25AA040A		4 Kbit, 1.8V, 16 Byte Page, SPI Serial EEPROM
	25LC040A		4 Kbit, 2.5V, 16 Byte Page, SPI Serial EEPROM
	25AA040AX		4 Kbit, 1.8V, 16 Byte Page, SPI Serial EEPROM, in alternate pinout (ST only)
	25LC040AX		4 Kbit, 2.5V, 16 Byte Page, SPI EEPROM, in alternate pinout (ST only)
Tape & Reel:	Blank	=	Standard packaging
	T	=	Tape & Reel
Temperature Range:	I	=	-40°C to+85°C
	E	=	-40°C to+125°C
Package:	MS	=	Plastic MSOP (Micro Small Outline), 8-lead
	P	=	Plastic DIP (300 mil body), 8-lead
	SN	=	Plastic SOIC (3.90 mm body), 8-lead
	ST	=	Plastic TSSOP (4.4 mm body), 8-lead
	MC	=	Plastic (2x3x0.9 mm body), 8-lead
	MNY(1)	=	Plastic TDFN (2x3x0.75 mm body), 8-lead (Tape and Reel only)
	OT	=	Plastic SOT-23, 6-lead (Tape and Reel only)

Note 1: "Y" indicates a Nickel Palladium Gold (NiPdAu) finish.

Examples:

a) 25AA040A-I/MS = 4 Kbit, 16-byte page, 1.8V Serial EEPROM, Industrial temp., MSOP package

b) 25AA040AT-I/SN = 4 Kbit, 16-byte page, 1.8V Serial EEPROM, Industrial temp., Tape & Reel, SOIC package

c) 25LC040AT-I/SN = 4 Kbit, 16-byte page, 2.5V Serial EEPROM, Industrial temp., Tape & Reel, SOIC package

d) 25LC040AT-I/ST = 4 Kbit, 16-byte page, 2.5V Serial EEPROM, Industrial temp., Tape & Reel, TSSOP package

e) 25LC040AT-E/SN = 4 Kbit, 16-byte page, 2.5V Serial EEPROM, Extended temp., Tape & Reel, SOIC package

f) 25LC040AX-E/ST = 4 Kbit, 16-byte page, 2.5V Serial EEPROM, Extended temp., rotated pin-out, TSSOP package

g) 25LC040AT-I/MNY = 4 Kbit, 16-byte page, 2.5V Serial EEPROM, Industrial temp., Tape & Reel, TDFN package

NOTES:

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE**.** Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

Trademarks

The Microchip name and logo, the Microchip logo, dsPIC, FlashFlex, KEELOQ, KEELOQ logo, MPLAB, PIC, PICmicro, PICSTART, PIC^{32} logo, rfPIC, SST, SST Logo, SuperFlash and UNI/O are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

FilterLab, Hampshire, HI-TECH C, Linear Active Thermistor, MTP, SEEVAL and The Embedded Control Solutions Company are registered trademarks of Microchip Technology Incorporated in the U.S.A.

QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
═ ISO/TS 16949 ═

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
