APPLICATION INFORMATION

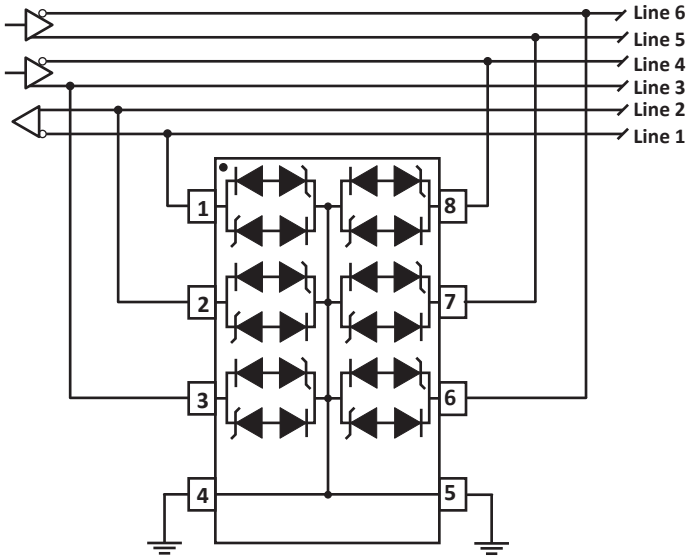

FIGURE 1 - BIDIRECTIONAL COMMON-MODE PROTECTION FOR A TRANSCEIVER

Circuit connectivity is as follows:

- Line 1 connected to Pin 1.
- Line 2 connected to Pin 2.
- Line 3 connected to Pin 3.
- Line 4 connected to Pin 8.
- Line 5 connected to Pin 7.
- Line 6 connected to Pin 6.
- Pins 4 and 5 connected to ground.

CIRCUIT BOARD RECOMMENDATIONS

Circuit board layout is critical for electromagnetic compatibility protection. The following guidelines are recommended:

- The protection device should be placed near the input terminals or connectors, the device will divert the transient current immediately before it can be coupled into the nearby traces.
- The path length between the TVS device and the protected line should be minimized.
- All conductive loops including power and ground loops should be minimized.
- The transient current return path to ground should be kept as short as possible to reduce parasitic inductance.
- Ground planes should be used whenever possible. For multilayer PCBs, use ground vias.
