Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Table 3. Pin Function Descriptions

Pin No.	Mnemonic	Description
1, 2, 5, 7 to 12, 14, 16 to 19, 22, 24, 27 to 30, 32, 34 to 36	GND	Ground. Connect to ground plane via a low impedance path.
3, 13, 15, 31, 33	VPS1, VPS2, VPS3, VPS4, VPS5	Positive Supply Voltage. Connect all pins to the same supply. To ensure adequate external bypassing, connect 0.1 μ F capacitors between each pin and ground.
4, 6	LOIP, LOIN	Local Oscillator Input. 50 Ω single-ended local oscillator input. Pins must be ac-coupled. AC-couple LOIN to ground and drive LO through LOIP.
20, 21, 25, 26	IBBP, IBBN, QBBN, QBBP	Baseband Inputs. Differential in-phase and quadrature baseband inputs. These high impedance inputs must be dc-biased to approximately 1.5 V dc. These inputs are not self-biased and must be externally biased.
23	VOUT	RF Output. Single-ended, 50 Ω , internally biased RF output. Pin must be ac-coupled to the load.
	Exposed Pad	Exposed Pad. Connect the exposed pad to the ground plane via a low impedance path.
