

Description

The Zarlink dual channel Le88266/286 Tracking Battery Switching (ABS) VoicePort™ device implements a dual-channel telephone line interface by providing all the necessary voice interface functions from the high voltage subscriber line to the μ P/DSP digital interface. The ABS device can operate from external battery supplies, or from supplies generated by the on-chip switching regulator controllers. This device reduces system level cost, space and power. Designers benefit by having a simple, cost effective, low-power and dense, interface design without sacrificing features or functionality. The programmable, feature rich VoicePort device provides a highly functional line interface which meets the requirements of short and medium loop (up to 1500 Ohms total at 1 REN) applications. Features include: high voltage switching regulator, self-test, line test capabilities, integrated ringing (up to 110 Vpk), worldwide software programmability with wideband capability, flexible signal generator with tone cadencing and caller ID generation. These VoicePort device features are crucial for designing cost-effective, full-featured Voice over Broadband solutions.

Features	Benefits
Highest level of integration	Reduces system BOM and discrete component count
Smallest footprint	Saves board space
Pin-compatible options	Provides design flexibility to develop one design and populate the voice socket with the right features for a given market—100 V or 120 V, internal balanced (sinusoidal or trapezoidal)
Lowest cost of ownership	Provides the most cost-effective BOM for 2-channel applications
Highly programmable	Offers design flexibility to develop one application for worldwide markets
Integrated ring cadencing and system state control	Reduces real-time software overhead
Common application programming interface	Significantly reduces development time with VoicePath API-II software
Comprehensive line sensing	Enables high performance GR-909 diagnostics and subscriber loop test and self test support with VeriVoice Test Suite software
Integrated switching regulator	Enables lowest component count and highest efficiency in all states of operation
