SELECTION GUIDE

The output voltage, auto discharge function, package for the ICs can be selected at the user's request.

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
R1173Dxx1*-TR-FE	HSO6N-6	3,000 pcs	Yes	Yes
R1173Hxx1*-T1-FE	SOT-89-5	1,000 pcs	Yes	Yes
R1173Sxx1*-E2-FE	HSOP-6J	1,000 pcs	Yes	Yes
xx: The output voltage can be designated in the range from 0.8V(08) to 5.0V(50) in 0.1V steps. External Setting Type: 00 (ADJ pin voltage is fixed at 1.0V.) (For other voltages, please refer to MARK INFORMATION.) * : The auto discharge function at off state are options as follows. (B) "H" active, without auto discharge function at off state (D) "H" active, with auto discharge function at off state				

PIN CONFIGURATIONS

PIN DESCRIPTIONS

●SOT-89-5

Pin No.	Symbol	Description
1	ADJ	ADJUST Pin (R1173H001x)
	NC	No Connection (R1173Hxx1x)
2	GND	Ground Pin
3	CE	Chip Enable Pin ("H" Active)
4	V _{DD}	Input Pin
5	V _{OUT}	Output Pin

●HSON-6

Pin No.	Symbol	Description
1	V _{OUT} *1	Output Pin
2	V _{OUT} *1	Output Pin
3	ADJ	ADJUST Pin (R1173D001x)
	NC	No Connection (R1173Dxx1x)
4	GND	Ground Pin
5	CE	Chip Enable Pin ("H" Active)
6	V _{DD}	Input Pin

*) Tab and tab suspension leads in the  parts are GND level.
(They are connected to the reverse side of the IC.)
The tab is better to be connected to the GND, but leaving it open is also acceptable.
The tab suspension leads should be open and do not connect to other wires or land patterns.

*1) The V_{OUT} pin must be wired together when it is mounted on board.

●HSOP-6J

Pin No.	Symbol	Description
1	V_{OUT}	Output Pin
2	GND* ¹	Ground Pin
3	ADJ	ADJUST Pin (R1173S001x)
	NC	No Connection (R1173Sxx1x)
4	CE	Chip Enable Pin ("H" Active)
5	GND* ¹	Ground Pin
6	V_{DD}	Input Pin

*1) The GND pin must be wired together when it is mounted on board.

ABSOLUTE MAXIMUM RATINGS

Symbol	Item	Rating	Unit
V_{IN}	Input Voltage	6.5	V
V_{CE}	Input Voltage (CE Input Pin)	−0.3 to 6.5	V
V_{OUT}	Output Voltage	−0.3 to $V_{IN}+0.3$	V
P_D	Power Dissipation (SOT-89-5)*	900	mW
	Power Dissipation (HSOP-6J)*	900	
	Power Dissipation (HSOP-6J)*	1700	
T_{opt}	Operating Temperature	−40 to 85	°C
T_{stg}	Storage Temperature	−55 to 125	°C

*) For Power Dissipation, please refer to PACKAGE INFORMATION.

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field.

The functional operation at or over these absolute maximum ratings is not assured.

RECOMMENDED OPERATING CONDITIONS (ELECTRICAL CHARACTERISTICS)

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

ELECTRICAL CHARACTERISTICS

• R1173xxxxB/D (Fixed Output Voltage Type)

T_{opt}=25°C

Symbol	Item	Conditions		Min.	Typ.	Max.	Unit
V _{IN}	Input Voltage			1.4		6.0	V

Technical Notes on External Components and Typical Application

(Refer to the example of typical application)

Example of the typical application of R1173x (Fixed Output Type)

Phase Compensation

In these ICs, phase compensation is made with the output capacitor for securing stable operation even if the load current is varied. For this purpose, use as much as a capacitor as C2. Recommendation value is as follows:

Mounting on PCB

Make VDD and GND lines sufficient. If their impedance is high, a current flows, the noise picked up or unstable operation may result. Further use a 4.7μF or more value capacitor between VDD pin and GND pin as close as possible.

Set an Output capacitor between VOUT pin and GND pin for phase compensation as close as possible.

Output Voltage	C2 recommendation value	Components Recommendation	
$V_{OUT} < 1.0V$	Tantalum 4.7μF or more		
$1.0 \leq V_{OUT} < 3.3V$	Ceramic 4.7μF or more	Kyocera 4.7μF (1608)	Part Number: CM105X5R475M06AB
		Murata 4.7μF (1608)	Part Number: GRM188R60J475KE19B
		Murata 10μF (1608)	Part Number: GRM188B30G106ME46B
$3.3V \leq V_{OUT}$	Ceramic 4.7μF or more	Kyocera 4.7μF (thin 2012)	Part Number: CT21X5R475M06AB
		Murata 10μF (1608)	Part Number: GRM188B30G106ME46B

If you use a tantalum type capacitor and ESR value of the capacitor is large, output might be unstable. Evaluate your circuit with considering frequency characteristics.

Depending on the capacitor size, manufacturer, and part number, the bias characteristics and temperature characteristics are different. Evaluate the circuit with actual using capacitors.

Technical Notes on Output Voltage Setting of Adjustable Output type (R1173x001x)

The Output Voltage may be adjustable for any output voltage between its 1.0V reference and its V_{DD} setting level. An external pair of resistors is required, as shown above.

The complete equation for the output voltage is described step by step as follows;

$$I_2 = I_{IC} + I_3 \dots\dots\dots (1)$$

$$I_3 = 1.0/R_3 \dots\dots\dots (2)$$

Thus,

$$I_2 = I_{IC} + 1.0/R_3 \dots\dots\dots (3)$$

Therefore,

$$V_{OUT} = 1.0 + R_2 \times I_2 \dots\dots\dots (4)$$

Put Equation (3) into Equation (4), then

$$\begin{aligned} V_{OUT} &= 1.0 + R_2(I_{IC} + 1.0/R_3) \\ &= 1.0(1 + R_2/R_3) + R_2 \times I_{IC} \dots\dots\dots (5) \end{aligned}$$

In 2nd term, or $R_2 \times I_{IC}$ will produce an error in V_{OUT} .

In Equation (5),

$$I_{IC} = 1.0/R_{IC} \dots\dots\dots (6)$$

$$\begin{aligned} R_2 \times I_{IC} &= R_2 \times 1.0/R_{IC} \\ &= 1.0 \times R_2/R_{IC} \dots\dots\dots (7) \end{aligned}$$

For better accuracy, choosing $R_2 (<< R_{IC})$ reduces this error.

*) The graph is a typical characteristic, please evaluate the circuit with an actual condition.

16) Stable Area: ESR limit vs. Load current

0.8V to 3.3V Output type : $C_{OUT}=4.7\mu F$ (Kyocera CM105X5R475M06AB)

5.0V Output type : $C_{OUT}=4.7\mu F$ (Kyocera CT21X5R475K06AB)

Measurement Conditions

- $V_{IN}=V_{OUT}+1V$
- Frequency=10Hz to 1MHz
- $T_{opt}=25^{\circ}C$

As an output capacitor for this IC, Ceramic capacitor is recommendable. However, other low ESR type capacitor can be used with this IC.

For your reference, noise level is tested, and if the noise level is $40\mu V$ or less than $40\mu V$, the ESR values are plotted as stable area. Upper limit is described in the next five graphs, or ESR vs. Output Current. (Hatched area is the stable area.)
