ABSOLUTE MAXIMUM RATINGS

Table 3 – Absolute Maximum Ratings

This device contains circuitry to protect the inputs against damage caused by high static voltages or electric fields; however, it is advised that normal precautions be taken to avoid application of any voltage greater than maximum rated voltages to these high-impedance (Hi-Z) circuits.

The device also contains protection against external magnetic fields. Precautions should be taken to avoid application of any magnetic field more intense than the maximum field intensity specified in the maximum ratings. [1]

Notes:

1. Permanent device damage may occur if absolute maximum ratings are exceeded. Functional operation should be restricted to recommended operating conditions. Exposure to excessive voltages or magnetic fields could affect device reliability.
2. All voltages are referenced to V_{SS}.
3. Power dissipation capability depends on package characteristics and use environment.

Notes:

1. There is a 2 ms startup time once V_{DD} exceeds $V_{DD,}$(max). See "Power Up and Power Down Sequencing" on page 8.
2. V_{IH}(max) = V_{DD} + 0.3 V_{DC} ; V_{IH}(max) = V_{DD} + 2.0 V_{AC} (pulse width ≤ 10 ns) for I ≤ 20.0 mA.
3. V_{IL}(min) = -0.5 V_{DC} ; V_{IL}(min) = -2.0 V_{AC} (pulse width ≤ 10 ns) for I ≤ 20.0 mA.
4. AEC-Q100 Grade 1 temperature profile assumes 10% duty cycle at maximum temperature (2 years out of 20 years life.)

Power Up and Power Down Sequencing

The MRAM is protected from write operations whenever V_{DD} is less than V_{WI}. As soon as V_{DD} exceeds V_{DD}(min), there is a startup time of 2 ms before read or write operations can start. This time allows memory power supplies to stabilize.

The $\overline{E}$ and $\overline{W}$ control signals should track V_{DD} on power up to V_{DD}- 0.2 V or V_{IH} (whichever is lower) and remain high for the startup time. In most systems, this means that these signals should be pulled up with a resistor so that signal remains high if the driving signal is Hi-Z during power up. Any logic that drives E and W should hold the signals high with a power-on reset signal for longer than the startup time.

During power loss or brownout where V_{DD} goes below V_{WI}, writes are protected and a startup time must be observed when power returns above V_{DD}(min).

Notes:

1. All write occurs during the overlap of $\overline{E}$ low and $\overline{W}$ low. Power supplies must be properly grounded and decoupled and bus contention conditions must be minimized or eliminated during read and write cycles. If $\overline{G}$ goes low at the same time or after $\overline{W}$ goes low, the output will remain in a high impedance state. After $\overline{W}$, $\overline{E}$ or $\overline{UB}/\overline{LB}$ has been brought high, the signal must remain in steady-state high for a minimum of 2 ns. The minimum time between $\overline{E}$ being asserted low in one cycle to $\overline{E}$ being asserted low in a subsequent cycle is the same as the minimum cycle time allowed for the device.

2. All write cycle timings are referenced from the last valid address to the first transition address.

3. This parameter is sampled and not 100% tested. Transition is measured ±200 mV from the steady-state voltage. At any given voltage or temperate, t_{WLQZ}(max) < t_{WHQX}(min)

REVISION HISTORY

Revision	Date	Description of Change
5	Sept 21, 2007	Changed MR2A16ATS35C product description to Legacy Commercial. Added the New Commerical temperature product (MR2A16AYS35) information. Table 3: MR2A16AYS35 Hmax-write=25 Oe. Table 4: MR2A16AYS35 has a 2 ms power up waiting period. Table 6: Applied values to TBD's in IDD specifications.
6	Nov 12, 2007	Table 2: Changed IDDA to IDDR or IDDW. Table 13: Added noteindicating that TS and YS are both valid package codes. Current Part Numbering System: Added commercial (missing letter) temperature range.
7	Sep 12, 2008	Reformat Datasheet for EverSpin, Add BGA Packaging Information, Add Tape & Reel Part Numbers, Add Power Sequencing Info, Correct IOH spec of VOH to -100 uA, Correct ac Test Conditions.
8	July 22, 2009	Add TSOP2 Lead Cross-Section, Add Production Note. Converted to new document format.
9	Dec 16, 2011	Added AEC-Q100 Grade 1 product option for TSOP2 package to Table 4.1. Revised Tables 2.1, 2.2 and 4.1 to include AEC-Q100 Grade 1 specifications. New logo design.
10	August 29, 2012	Corrected error in Table 1.1. Corrected Figure 2.1. Improved magnetic immunity for Industrial and Extended Grades. Corrected minor errors in Table 4.1 Product Numbering.
10.1	July 30, 2013	Corrected G to read $\overline{G}$ for 44-TSOP Type2 in Figure 1.2.
11	October 14, 2013	MR2A16AMYS35/R is released from Preliminary to fully qualified. Reformatted to meet current standards.
11.1	May 19, 2015	Revised Everspin contact information.
11.2	June 11, 2015	Corrected Japan Sales Office telephone number.
11.3	March 23, 2018	Updated the Contact Us table
