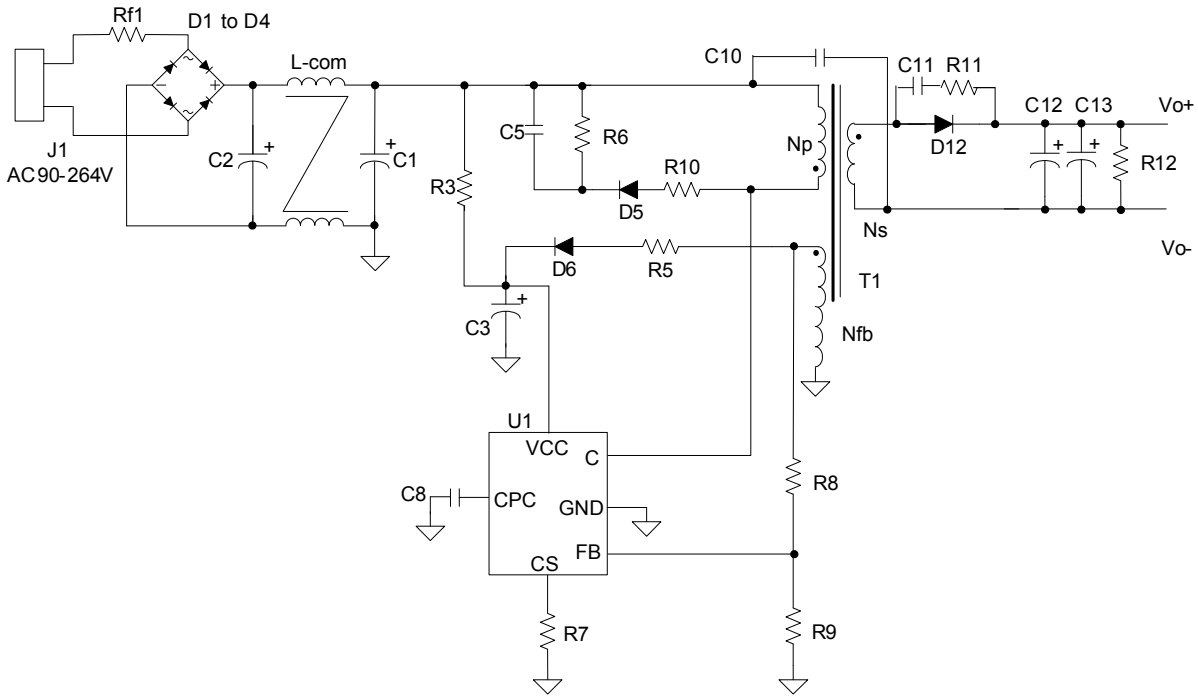
Typical Applications Circuit



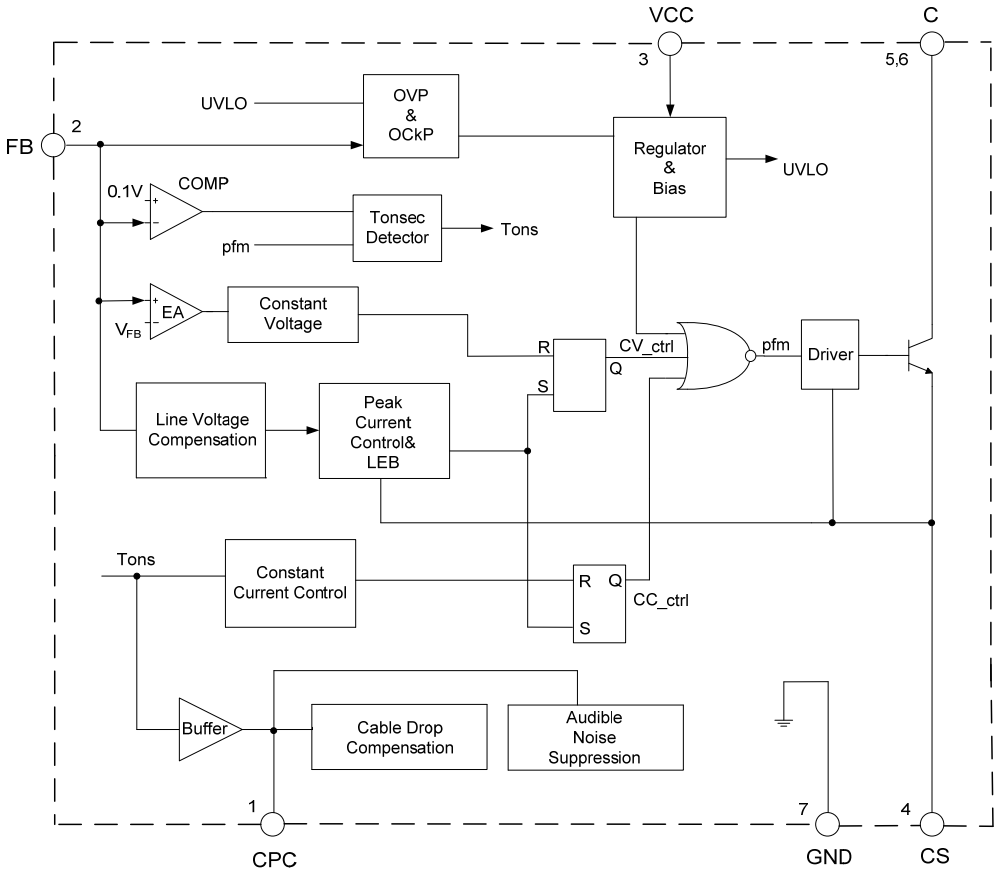
For AP3971 (12V/1A)

Item	Function	QTY	Item	Function	QTY
C1,C2	10μF/400V, electrolytic	2	U1	AP3971, PDIP-7	1
C3	4.7μF/50V, electrolytic	1	Rf1	2A/250V, fuse	1
C5	1nF/250V, ceramic	1	R3	3.3MΩ/0.25W	1
C8	0.1μF, 0805	1	R5	3.9Ω , 0805	1
C10	1nF/250V_{AC}, Y1 capacitor	1	R6	150kΩ/0.25W	1
C11	1nF, 0805	1	R7	0.62Ω, 1206	1
C12, C13	470μF/16V	2	R8	31kΩ, 0805	1
D1 to D6	1N4007, rectifier diode	6	R9	13kΩ, 0805	1
D12	MBR3100, schottky diode	1	R10	360Ω, 0805	1
L-com	EE10, 15mH, Common inductor	1	R11	27Ω, 0805	1
T1	EE19 core, PC40, transformer	1	R12	1.2kΩ, 0805	1

Pin Descriptions

Pin Number	Pin Name	Function
1	CPC	This pin connects a capacitor to GND for output cable compensation
2	FB	The voltage feedback from auxiliary winding
3	VCC	This pin receives rectified voltage from the auxiliary winding of the transformer
4	CS	Current sense for primary side of transformer
5, 6	C	This pin is connected with an internal power BJT's collector
7	GND	This pin is the signal reference ground

Functional Block Diagram



Absolute Maximum Ratings (Note 5)

Symbol	Parameter	Rating		Unit
V_{CC}	Supply Voltage	-0.3 to +22		V
V_{FB}	FB Input Voltage	-1 to +10		V
V_{CBO}	Collector-emitter Voltage	700		V
–	Collector DC Current	AP3965	1.5	A
		AP3966	3.2	
		AP3971	4	
T_J	Operating Junction Temperature	150		°C
T_{STG}	Storage Temperature	-65 to +150		°C
T_{LEAD}	Lead Temperature (Soldering, 10 sec)	300		°C
–	ESD (Machine Model)	200		V
–	ESD (Human Body Model)	2000		V
P_D	Total Power Dissipation	AP3965	0.9	W
		AP3966	1.4	
		AP3971	1.5	

Note: 5. Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.

Recommended Operating Conditions

Symbol	Parameter	Min	Max	Unit
V_{CC}	Supply Voltage	–	22	V
T_{OP}	Operating Temperature Range	-40	+85	°C
f_{MAX}	Maximum Operating Frequency	–	60	kHz

Thermal Impedance (Note 6)

Symbol	Parameter	Value		Unit
θ_{JA}	Junction to Ambient	AP3965	80	°C/W
		AP3966	50	
		AP3971	45	
θ_{JC}	Junction to Case	AP3965	40	
		AP3966	26	
		AP3971	22	

Note: 6. When mounted a standard single-sided FR4 board with 300mm^2 Cu (at least 35μm thick) connected to all collectors and CS pins.

Electrical Characteristics (@V_{CC} =15V, T_J = +25°C, unless otherwise specified.)

Symbol	Parameters	Conditions	Min	Typ	Max	Unit
UVLO Section

Operation Description

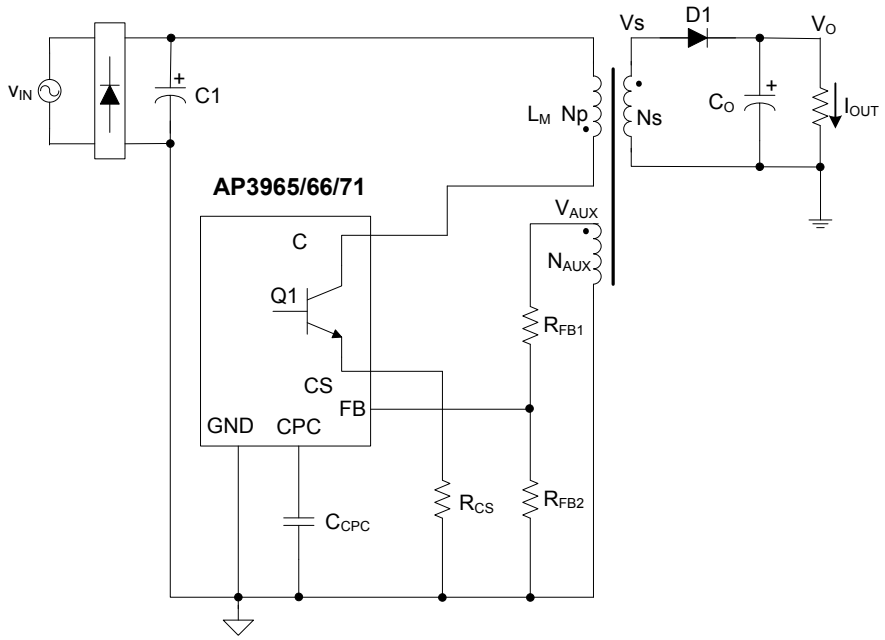

Figure 1 Simplified Flyback Converter Controlled by AP3965/66/71

Constant Primary Peak Current

The primary current Ip(t) is sensed by a current sense resistor R_{CS} as shown in Figure 1.

The current rises up linearly at a rate of:

$$\frac{dip(t)}{dt} = \frac{vg(t)}{L_M} \quad \text{.....(1)}$$

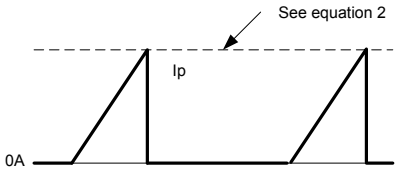

Figure 2 Primary Current Waveform

As illustrated in Figure 2, when the current Ip(t) rises up to Ipk, the switch Q1 turns off. The constant peak current is given by:

$$Ipk = \frac{Vcs}{Rcs} \quad \text{.....(2)}$$

The energy stored in the magnetizing inductance L_M each cycle is therefore:

$$Eg = \frac{1}{2} \cdot L_M \cdot Ipk^2 \quad \text{.....(3)}$$

So the power transferring from input to output is given by:

$$P = \frac{1}{2} \cdot L_M \cdot Ipk^2 \cdot f_{SW} \quad \text{.....(4)}$$

Where f_{SW} is the switching frequency. When the peak current Ipk is constant, the output power depends on the switching frequency f_{SW}.

Operation Description (cont.)

Constant Voltage Operation

The AP3965/66/71 captures the auxiliary winding feedback voltage at FB pin and operates in constant-voltage (CV) mode to regulate the output voltage. Assuming the secondary winding is master, the auxiliary winding is slave during the D1 on-time. The auxiliary voltage is given by:

$$V_{AUX} = \frac{N_{AUX}}{N_S} \cdot (Vo + V_d) \quad \text{.....(5)}$$

Where V_d is the diode forward drop voltage, N_{AUX} is the turns of auxiliary winding, and N_S is the turns of secondary winding.

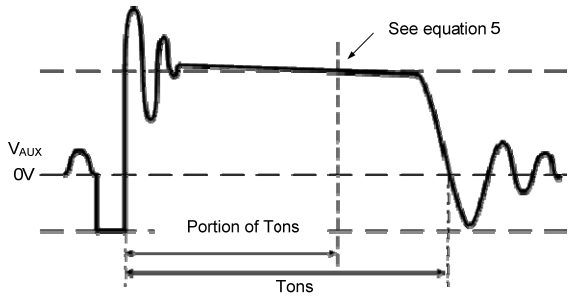

Figure 3. Auxiliary Voltage Waveform

The output voltage is different from the secondary voltage in a diode forward drop voltage V_d which depends on the current. If the secondary voltage is always detected at a constant secondary current, the difference between the output voltage and the secondary voltage will be a fixed V_d. The voltage detection point is portion of Tons after D1 is turned on. The CV loop control function of AP3965/66/71 then generates a D1 off-time to regulate the output voltage.

Constant Current Operation

The AP3965/66/71 is designed to work in constant current (CC) mode. Figure 4 shows the secondary current waveforms.

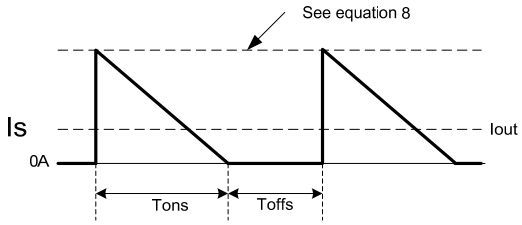

Figure 4. Secondary Current Waveform

In CC operation, the CC loop control function of AP3965/66/71 will keep a fixed proportion between D1 on-time Tons and D1 off-time Toffs by discharging or charging the built-in capacitance connected. This fixed proportion is

$$\frac{Tons}{Toffs} = \frac{4}{2} \quad \text{..... (6)}$$

The relation between the output constant-current and secondary peak current Ipks is given by:

$$I_{OUT} = \frac{1}{2} \cdot Ipks \cdot \frac{Tons}{Tons + Toffs} \quad \text{.....(7)}$$

At the instant of D1 turn-on, the primary current transfers to the secondary at an amplitude of:

$$Ipks = \frac{N_P}{N_S} \cdot Ipk \quad \text{.....(8)}$$

Operation Description (cont.)

Thus the output constant current is given by:

$$I_{OUT} = \frac{1}{3} \cdot \frac{N_P}{N_S} \cdot Ipk \quad \text{.....(9)}$$

Leading Edge Blanking (LEB)

When the power switch is turned on, a turn-on spike on the output pulse rising edge will occur on the sense-resistor. To avoid false termination of the switching pulse, a typical 500ns leading edge blanking is built in. During this blanking period, the current sense comparator is disabled and the gate driver cannot be switched off.

The built-in LEB in AP3965/66/71 has shorter delay time from current sense terminal to output pulse than those IC solutions adopting external RC filter as LEB.

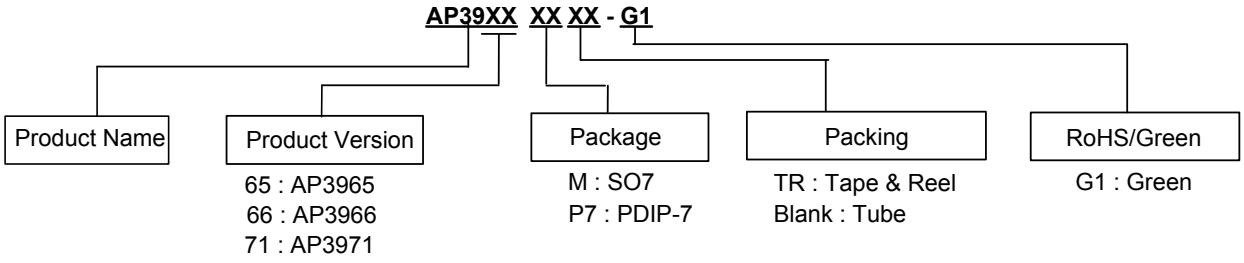
Built-in Cable Compensation

The AP3965/66/71 has built-in fixed voltage of 0.35V typical to compensate the drop of output cable when the load is changed from zero to full load. A typical 0.01μF external capacitor connected to the CPC pin is used to smooth voltage signal for cable compensation.

Over Temperature Protection

The AP3965/66/71 has internal thermal sensing circuit to shut down the PFM driver output when the die temperature reaches 160°C typical. When the die temperature drops about 40°C, the IC will recover automatically to normal operation.

Ordering Information



Diodes IC's Pb-free products with "G1" suffix in the part number, are RoHS compliant and green.

Package	Temperature Range	Part Number	Marking ID	Packing
SO7	-40°C to 85°C	AP3965MTR-G1	3965M-G1	4,000/Tape & Reel
PDIP-7		AP3966P7-G1	AP3966P7-G1	50/Tube
		AP3971P7-G1	AP3971P7-G1	50/Tube

Marking Information

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or

2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
