1. Open Circuit Inductance (OCL) Test Parameters: 100kHz, 1.0Vrms, 0.0Adc, +25°C
2. Full Load Inductance (FLL) Test Parameters: 100kHz, 1.0Vrms, I_{sat}1, +25°C
3. I_{rms}: DC current for an approximate temperature rise of 40°C without core loss. Derating is necessary for AC currents. PCB layout, trace thickness and width, air-flow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed 125°C under worst case operating conditions verified in the end application.
4. I_{sat}1: Peak current for approximately 20% rolloff @ +25°C

5. I_{sat}2: Peak current for approximately 20% rolloff @ +125°C
6. K-factor: Used to determine B_{pp} for core loss (see graph). B_{pp} = K * L * I * 10⁻³. B_{pp} (Gauss), K: (K-factor from table), L: (Inductance in nH), I (Peak to peak ripple current in Amps).
7. Part Number Definition: FP0906Rx-Rxx-R
FP0906 = Product code and size
Rx= DCR indicator
Rxx= Inductance value in uH, R= decimal point
-R suffix = RoHS compliant
