TABLE OF CONTENTS

REVISION HISTORY

1/16—Revision 0: Initial Version

SPECIFICATIONS

T_A = −40°C to +85°C, V_{CC} = 5 V, unless otherwise noted.

Table 1.

Parameter	Min	Typ	Max	Unit	Test Conditions/Comments
FREQUENCY					
Range					
Output Frequency (f_{OUT})	12.17		13.33	GHz	
Half Output Frequency (f_{OUT}/2)	6.085		6.665	GHz	
Drift Rate		1.2		MHz/°C	
Pulling		2		MHz p-p	Pulling into a 2.0:1 voltage standing wave ratio (VSWR)
Pushing		2		MHz/V	At VTUNE = 5 V
OUTPUT POWER (P_{OUT})					
RFOUT	7	10.5	15	dBm	
RFOUT/2	−1	+4	+8	dBm	
Supply Current (I_{CC})		175		mA	V_{CC} = 4.75 V
		200	250	mA	V_{CC} = 5.00 V
		220		mA	V_{CC} = 5.25 V
HARMONICS, SUBHARMONICS					
1/2		39		dBc	
3/2		31		dBc	
Second		20		dBc	
Third		26		dBc	
TUNING					
Voltage (VTUNE)	2		13	V	
Sensitivity	75		350	MHz/V	
Tune Port Leakage Current			10	µA	VTUNE = 13 V
OUTPUT RETURN LOSS		2		dB	
SSB PHASE NOISE					
10 kHz Offset		−86	−82	dBc/Hz	
100 kHz Offset		−113	−110	dBc/Hz	

ABSOLUTE MAXIMUM RATINGS

Table 2.

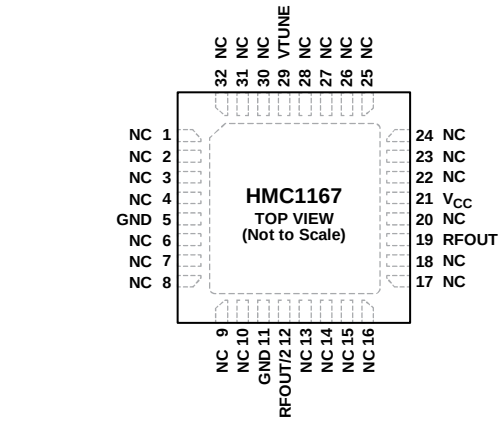
Parameter	Rating
V_{CC}	5.5 V dc
VTUNE	0 V to 15 V
Operating Temperature Range	−40°C to +85°C
Storage Temperature Range	−65°C to +150°C
Nominal Junction Temperature (to Maintain 1 Million Hours Mean Time to Failure (MTTF))	135°C
Nominal Junction Temperature (T_A = 85°C)	116°C
Maximum Reflow Temperature (MSL3 Rating)	260°C
Thermal Resistance (Junction to Ground Pad)	29°C/W
ESD Sensitivity	
Human Body Model (HBM)	300 V (Class 1A)
Field Induced Charged Device Model (FICDM)	300 V (Class II)

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS



NOTES
1. NC = NO CONNECT. HOWEVER, THESE PINS CAN BE CONNECTED TO RF/DC GROUND WITHOUT AFFECTING THE PERFORMANCE OF THE DEVICE.
2. THE PACKAGE BOTTOM HAS AN EXPOSED METAL PAD THAT MUST BE CONNECTED TO RF/DC GROUND.

13383-002

Figure 2. Pin Configuration

Table 3. Pin Function Descriptions

Pin No.	Mnemonic	Description
1 to 4, 6 to 10, 13 to 18, 20, 22 to 28, 30 to 32	NC	No Connect. However, these pins can be connected to RF/dc ground without affecting the performance of the device.
5, 11	GND	Ground. These pins must be connected to RF/dc ground.
12	RFOUT/2	Half Frequency Output. This pin is ac-coupled.
19	RFOUT	RF Output. This pin is ac-coupled.
21	V_{CC}	Supply Voltage (5 V).
29	VTUNE	Control Voltage and Modulation Input. The modulation bandwidth is dependent on the drive source impedance.
	EP	Exposed Pad. The package bottom has an exposed metal pad that must be connected to RF/dc ground.

THEORY OF OPERATION

The HMC1167 voltage controlled oscillator is a free running voltage controlled frequency source. The output frequency is controlled by applying a variable tune voltage to the VTUNE port. Because VTUNE is varied from the lowest to the highest allowed voltage, the VCO output frequency increases from the lowest to the highest operating frequency. This VCO output frequency change with the applied VTUNE input results in the VCO frequency sensitivity characteristic (MHz/V). The VCO frequency sensitivity is not constant and varies across the tunable range.

The HMC1167 VCO covers the minimum to maximum frequencies specified in this data sheet over the entire specified temperature range, including the VCO frequency drift (MHz/°C). For low phase noise operation, drive the VTUNE port from a low noise voltage source; excessive noise on the VTUNE port results in poor phase noise performance. The VTUNE port modulation bandwidth is typically greater than 10 MHz.

To achieve optimum VCO phase noise performance when using the HMC1167, it is important to use a low noise power supply for V_{CC} biasing. Because the VCO output frequency changes with small changes in the V_{CC} bias voltage (pushing), noise on the V_{CC} bias pin results in increased phase noise. Take care to use low noise regulators, otherwise, bias line noise may corrupt the low phase noise output of the HMC1167.

Internally, the RF output frequency is generated from a doubler circuit. This generation results in an unwanted low level output signal present at half the RFOUT frequency (RFOUT/2). If necessary, this undesired spurious signal can be further filtered on the customer application board using a filter. The RFOUT/2 output signal is available directly at the RFOUT/2 port. The RFOUT/2 port is commonly used to drive a phase-locked loop (PLL)/synthesizer for phase locking the HMC1167 output, if so desired.

Lastly, the HMC1167 RFOUT port incorporates an internal buffer amplifier to provide good output matching. The internal buffer amplifier also isolates the VCO core from the output load and minimizes the VCO frequency change with the changes to the output load impedance (pulling).

APPLICATIONS INFORMATION

The HMC1167 serves as the local oscillator (LO) in microwave synthesizer applications. The primary applications are point to point microwave radios, military, radars, test and measurement, as well as industrial and medical equipment. The low phase noise allows higher orders of modulation and offers improved bit error rates in communication systems, whereas the linear, monotonic tuning sensitivity allows a stable loop filter design. The higher output power minimizes the gain required to drive subsequent stages. The half frequency output reduces the input frequency to the prescaler without the addition of residual phase noise to the input of the phase-locked loop synthesizer.

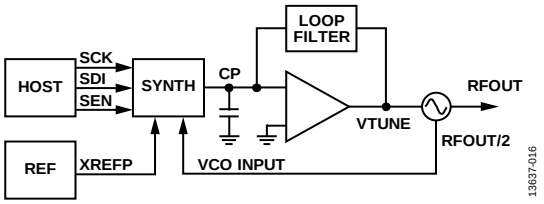

Figure 16. Typical Application Diagram

EVALUATION PRINTED CIRCUIT BOARD (PCB)

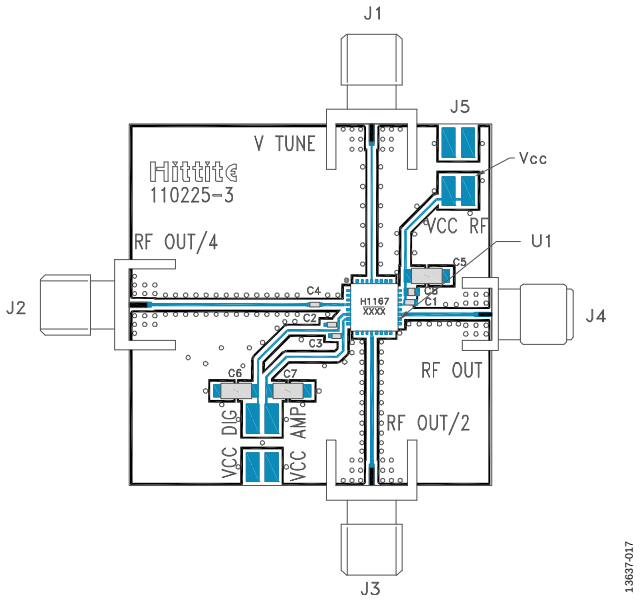

Figure 17. Evaluation PCB

The circuit board used in an application uses RF circuit design techniques. Ensure that the signal lines have 50 Ω impedance and that the package ground leads and backside ground paddle are connected directly to the ground plane.

Use a sufficient number of via holes to connect the top and bottom ground planes. The evaluation circuit board shown in Figure 17 is available from Analog Devices, Inc., upon request.

BILL OF MATERIALS

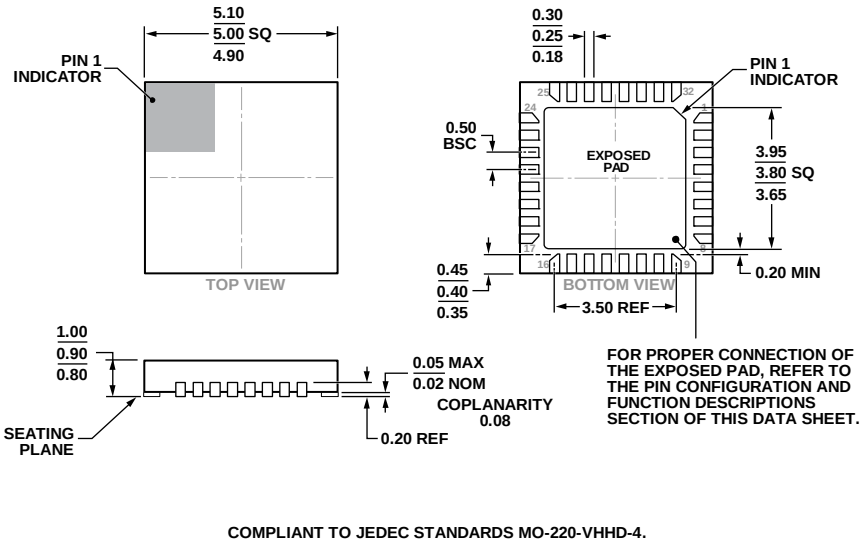
Table 4. Bill of Materials for the EV1HMC1167LP5

Item	Description
J1 to J4	PCB mount SMA RF connectors
J5, J6	2 mm dc headers
C1 to C3	100 pF capacitors, 0402 package
C4	1000 pF capacitor, 0402 package
C5 to C7	2.2 µF tantalum capacitors
C8	0.01 µF capacitor, 0603 package
U1	HMC1167 VCO
PCB[1]	110225 evaluation board[2]

[1] Circuit board material is Rogers 4350.
[2] Reference this number when ordering the complete evaluation PCB.

PACKAGING AND ORDERING INFORMATION

OUTLINE DIMENSIONS



COMPLIANT TO JEDEC STANDARDS MO-220-VHHD-4.

Figure 18. 32-Lead Lead Frame Chip Scale Package [LFCSP]
5 mm × 5 mm Body and 0.90 mm Package Height
