## Detailed Description

The MAX200–MAX209/MAX211/MAX213 consist of three sections: charge-pump voltage converters, drivers (transmitters), and receivers. Each section is described in detail.

### +5V to ±10V Dual Charge-Pump Voltage Converter

The +5V to ±10V conversion is performed by two charge-pump voltage converters (Figure 4). The first uses capacitor C1 to double +5V to +10V, storing +10V on the V+ output filter capacitor, C3. The second chargepump voltage converter uses capacitor C2 to invert +10V to -10V, storing -10V on the V- output filter capacitor, C4.

The MAX201 and MAX209 include only the V+ to Vcharge pump, and are intended for applications that have a  $V_{CC}$  = +5V supply and a V+ supply in the +9V to +13.2V range.

In shutdown mode, V+ is internally connected to  $V_{CC}$  by a 1kΩ pulldown resistor and V- is internally connected to ground by a 1kΩ pullup resistor.

### RS-232 Drivers

When  $V_{CC}$  = +5V, the typical driver output-voltage swing is ±8V when loaded with a nominal 5kΩ RS-232 receiver. The output swing is guaranteed to meet the EIA/TIA-232E and V.28 specifications, which call for ±5V minimum output levels under worst-case conditions. These include a minimum 3kΩ load,  $V_{CC}$  = +4.5V, and the maximum operating temperature. The open-circuit output-voltage swing ranges from (V+ - 0.6V) to V-.

Input thresholds are both CMOS and TTL compatible. The inputs of unused drivers can be left unconnected since 400kΩ pullup resistors to  $V_{CC}$  are included onchip. Since all drivers invert, the pullup resistors force the outputs of unused drivers low. The input pullup resistors typically source 15μA; therefore, the driver inputs should be driven high or open circuited to minimize power-supply current in shutdown mode.

When in low-power shutdown mode, the driver outputs are turned off and their leakage current is less than 1mA, even if the transmitter output is backdriven between 0V and ( $V_{CC}$  + 6V). Below -0.5V, the transmitter output is diode clamped to ground with a 1kΩ series impedance. The transmitter output is also zener clamped to approximately ( $V_{CC}$  + 6V), with a 1kΩ series impedance.

## +5V, RS-232 Transceivers with 0.1μF External Capacitors

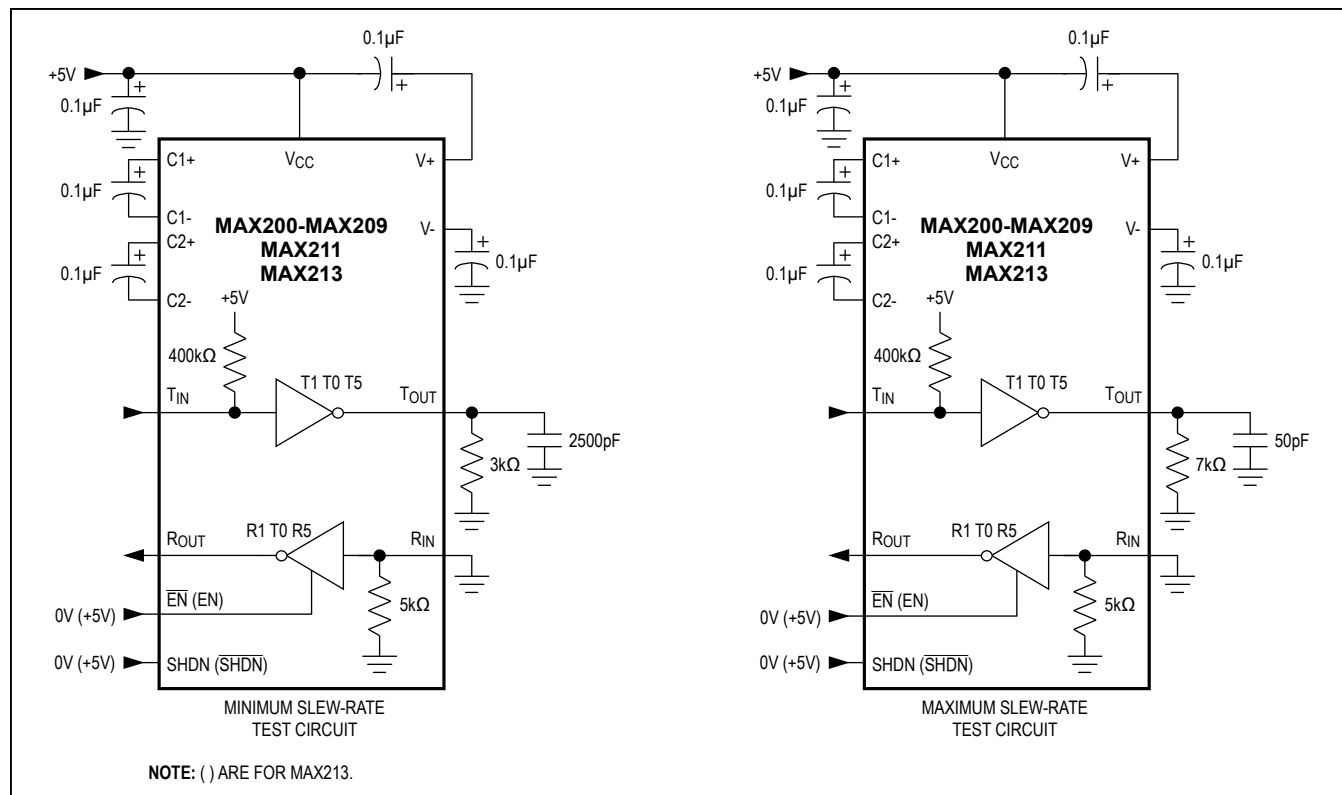

Figure 3. Transition Slew-Rate Test Circuit

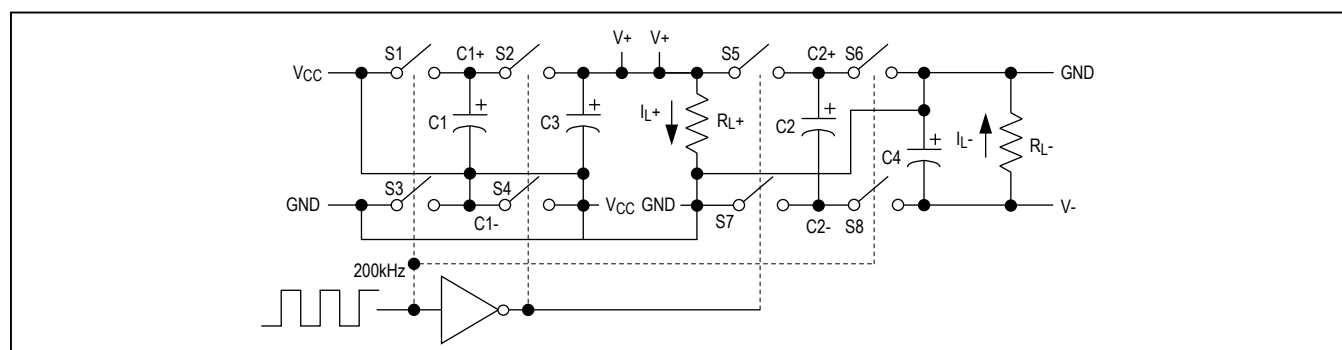

Figure 4. Dual Charge-Pump Diagram

### RS-232 Receivers

The receivers convert RS-232 signals to CMOS logic output levels. Receiver outputs are inverting, maintaining compatibility with driver outputs. The guaranteed receiver input thresholds of +0.8V and +2.4V are significantly tighter than the  $\pm 3.0$ V threshold required by the EIA/TIA-232E specification. This allows receiver inputs to respond to TTL/CMOS logic levels and improves noise margin for RS-232 levels.

The MAX200–MAX209/MAX211/MAX213 guaranteed +0.8V threshold (+0.6V in shutdown for the MAX213) ensures that receivers shorted to ground have a logic 1 output. Also, the 5kΩ input resistance to ground ensures that a receiver with its input left open also has a logic 1 output.

Receiver inputs have approximately +0.5V hysteresis. This provides clean output transitions, even with slow rise and fall time input signals with moderate amounts of noise and ringing. In shutdown, the MAX213 receivers R4 and R5 have no hysteresis.

MAX200–MAX209/  
MAX211/MAX213

+5V, RS-232 Transceivers  
with 0.1μF External Capacitors

Figure 5. Transmitter Outputs When Exiting Shutdown

Shutdown and Enable Control

In shutdown mode, the MAX200/MAX205/MAX206/ MAX211/MAX213 charge pumps are turned off, V+ is pulled down to V<sub>CC</sub>, V- is pulled to ground, and the transmitter outputs are disabled. This reduces supply current

typically to 1μA (15μA for the MAX213). The time required to exit shutdown is 1ms, as shown in Figure 5.

All receivers except R4 and R5 on the MAX213 are put into a high-impedance state in shutdown mode. The MAX213's R4 and R5 receivers still function in shutdown mode. These two receivers are useful for monitoring external activity while maintaining minimal power consumption.

The enable control is used to put the receiver outputs into a high-impedance state, so that the receivers can be connected directly to a three-state bus. It has no effect on the RS-232 drivers or on the charge pumps.

MAX213 Receiver Operation in Shutdown

During normal operation, the MAX213's receiver propagation delay is typically 1μs. When entering shutdown with receivers active, R4 and R5 are not valid until 80μs after  $\overline{\text{SHDN}}$  is driven low. In shutdown mode, propagation delays increase to 4μs for a high-to-low or a low-to-high transition.

When exiting shutdown, all receiver outputs are invalid until the charge pumps reach nominal values (< 2ms when using 0.1μF capacitors).

Table 1a. MAX200 Control Pin Configurations

SHDN	OPERATION STATUS	TRANSMITTERS T1–T5
0	Normal Operation	All Active
1	Shutdown	All High-Z

Table 1b. MAX205/MAX206/MAX211 Control Pin Configurations

SHDN	$\overline{\text{EN}}$	OPERATION STATUS	TRANSMITTERS T1–T5	RECEIVERS R1–R5
0	0	Normal Operation	All Active	All Active
0	1	Normal Operation	All Active	All High-Z
1	0	Shutdown	All High-Z	All High-Z

Table 1c. MAX213 Control Pin Configurations

$\overline{\text{SHDN}}$	EN	OPERATION STATUS	TRANSMITTERS T1–T4	RECEIVERS	
				R1, R2, R3	R4, R5
0	0	Shutdown	All High-Z	High-Z	High-Z
0	1	Shutdown	All High-Z	High-Z	Active*
1	0	Normal Operation	All Active	High-Z	High-Z
1	1	Normal Operation	All Active	Active	Active

\*Active = active with reduced performance.

## Applications Information

### Capacitor Selection

The type of capacitor used is not critical for proper operation. Ceramic capacitors are suggested. To ensure proper RS-232 signal levels over temperature when using 0.1μF capacitors, make sure the capacitance value does not degrade excessively as the temperature varies. If in doubt, use capacitors with a larger nominal value. Also observe the capacitors' ESR value over temperature, since it influences the amount of ripple on V+ and V-. To reduce the output impedance at V+ and V-, use larger capacitors (up to 10μF). If polarized capacitors are used, obey the polarities shown in Figure 1 and the pin configurations.

### Driving Multiple Receivers

Each transmitter is designed to drive a single receiver. Transmitters can be paralleled to drive multiple receivers.

### Driver Outputs When Exiting Shutdown

Figure 5 shows two driver outputs exiting shutdown. As they become active, the two driver outputs go to opposite RS-232 levels (one driver input is high, the other is low). Each driver is loaded with 3kΩ in parallel with 2500pF. The driver outputs display no ringing or undesirable transients as they come out of shutdown.

### Power-Supply Decoupling

In applications that are sensitive to power-supply noise, decouple V<sub>CC</sub> to ground with a capacitor of the same value as the charge-pump capacitors.

### V+ and V- as Power Supplies

A small amount of power can be drawn from V+ and V-, although this reduces noise margins.

### Power Supplies for MAX201/MAX209

If at power-up the V+ supply rises after the V<sub>CC</sub> supply, place a diode (e.g., 1N914) in series with the V+ supply.

**Table 2. Summary of EIA/TIA-232E, V.28 Specifications**

PARAMETER	CONDITION	EIA/TIA-232E, V.28 SPECIFICATION
Driver Output Voltage: 0 Level	3kΩ to 7kΩ load	+5.0V to +15V

**INTERNAL SCHEMATIC**

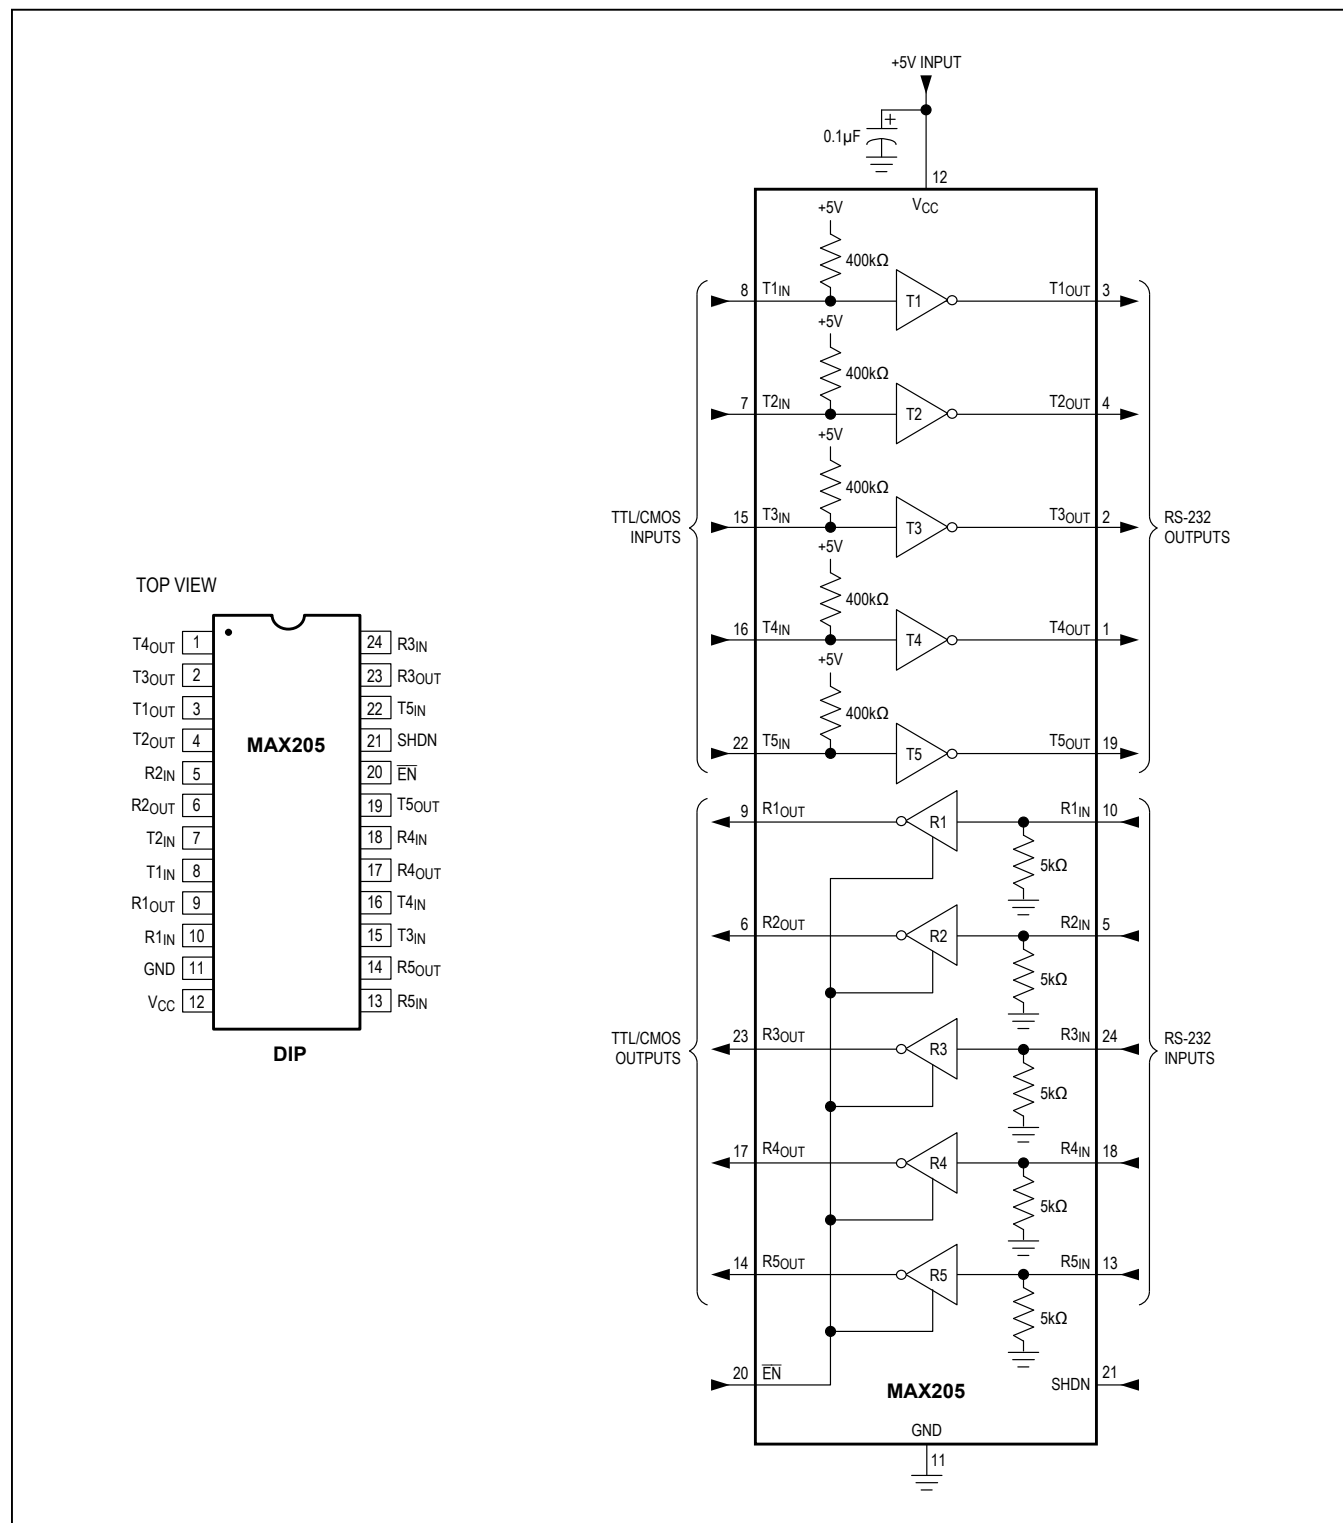

The schematic shows the internal circuitry of the MAX203. It includes two RS-232C drivers (T1, T2) and two RS-232C receivers (R1, R2). The drivers are connected to the T1IN, T1OUT, T2IN, and T2OUT pins. The receivers are connected to the R1IN, R1OUT, R2IN, and R2OUT pins. The internal -10V and +10V power supplies are connected to pins 12(10), 17, and 14(8). The VCC and GND pins are also shown.

**NOTE:** PIN NUMBERS IN ( ) ARE FOR SO PACKAGE.

**Internal Circuit Schematic:**

- Power and Control:** VCC (pin 11) is connected to a +5V input with a 0.1µF capacitor. V+ (pin 13) is connected to a +6.3V source with a 0.1µF capacitor. V- (pin 17) is connected to a +16V source with a 0.1µF capacitor. The SHDN pin (25) is connected to GND (10) and is active-low.
- Voltage Converters:** The MAX213 contains two internal converters: a +5V TO +10V VOLTAGE DOUBLER (pins 12, 14, 15) and a +10V TO -10V VOLTAGE INVERTER (pins 15, 16, 17).
- TTL/CMOS I/O:** Pins 7, 6, 20, and 21 are labeled T1IN, T2IN, T3IN, and T4IN. Pins 2, 3, 1, and 28 are labeled T1OUT, T2OUT, T3OUT, and T4OUT. Pins 8, 5, 26, 22, 19, and 24 are labeled R1OUT, R2OUT, R3OUT, R4OUT\*, R5OUT\*, and EN. Pins 9, 4, 27, 23, 18, and 25 are labeled R1IN, R2IN, R3IN, R4IN\*, R5IN\*, and SHDN.
- RS-232 I/O:** The schematic shows five RS-232C drivers (T1-T4) and five RS-232C receivers (R1-R5). Each driver/receiver pair is connected to a 5kΩ resistor and a 5kΩ capacitor to ground.

MAX211EAI	-40°C to +85°C	28 SSOP
<b>MAX213</b> CWI	0°C to +70°C	28 Wide SO
MAX213CAI	0°C to +70°C	28 SSOP
MAX213C/D	0°C to +70°C	Dice*
MAX213EWI	-40°C to +85°C	28 Wide SO
MAX213EAI	-40°C to +85°C	28 SSOP

\*Contact factory for dice specifications.

MAX200–MAX209/  
MAX211/MAX213

+5V, RS-232 Transceivers  
with 0.1µF External Capacitors

## Selector Guide (continued)

PART	POWER-SUPPLY VOLTAGE (V)	NUMBER OF RS-232 DRIVERS	NUMBER OF RS-232 RECEIVERS	NUMBER OF RECEIVERS ACTIVE IN SHUTDOWN	NUMBER OF EXTERNAL CAPACITORS (0.1µF)	LOW-POWER SHUTDOWN/TTL THREE-STATE
MAX204	+5	4	0	0	4	No/No
MAX205	+5	5	5	0	None	Yes/Yes
MAX206	+5	4	3	0	4	Yes/Yes
MAX207	+5	5	3	0	4	No/No
MAX208	+5	4	4	0	4	No/No
MAX209	+5 and +9.0 to +13.2	3	5	0	2	No/Yes
MAX211	+5	4	5	0	4	Yes/Yes
MAX213	+5	4	5	2	4	Yes/Yes

## Package Information

For the latest package outline information and land patterns (footprints), go to [www.maximintegrated.com/packages](http://www.maximintegrated.com/packages). Note that a “+”, “#”, or “-” in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

PACKAGE TYPE	PACKAGE CODE	DOCUMENT NO.
14 CDIP	J14-3	<a href="#">21-0045</a>

MAX200–MAX209/  
MAX211/MAX213

+5V, RS-232 Transceivers  
with 0.1µF External Capacitors

## Revision History

REVISION NUMBER	REVISION DATE	DESCRIPTION	PAGES CHANGED
6	10/03	Changed the Features section and section information to the <i>Next-Generation Device Features</i> section.	1
7	12/05	Added Note 1 to the <i>Absolute Maximum Ratings</i> section.	2
8	1/15	Updated page 1 content	1

For pricing, delivery, and ordering information, please contact Maxim Direct at 1-888-629-4642, or visit Maxim Integrated's website at [www.maximintegrated.com](http://www.maximintegrated.com).

*Maxim Integrated cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim Integrated product. No circuit patent licenses are implied. Maxim Integrated reserves the right to change the circuitry and specifications without notice at any time. The parametric values (min and max limits) shown in the Electrical Characteristics table are guaranteed. Other parametric values quoted in this data sheet are provided for guidance.*
