## 1 Ordering parts

## 1.1 Determining valid orderable parts

Valid orderable part numbers are provided on the web. To determine the orderable part numbers for this device, go to freescale.com and perform a part number search for the following device numbers: PK10 and MK10.

#### 2 Part identification

## 2.1 Description

Part numbers for the chip have fields that identify the specific part. You can use the values of these fields to determine the specific part you have received.

#### 2.2 Format

Part numbers for this device have the following format:

Q K## A M FFF R T PP CC N

## 2.3 Fields

This table lists the possible values for each field in the part number (not all combinations are valid):

| Field | Description          | Values   |
|-------|----------------------|--|
| Q     | Qualification status | <ul> <li>M = Fully qualified, general market flow</li> <li>P = Prequalification</li> </ul> |
| K##   | Kinetis family       | • K10  |
| А     | Key attribute        | <ul> <li>D = Cortex-M4 w/ DSP</li> <li>F = Cortex-M4 w/ DSP and FPU</li> </ul>             |
| М     | Flash memory type    | <ul> <li>N = Program flash only</li> <li>X = Program flash and FlexMemory</li> </ul>       |

#### reminology and guidelines

| Field | Description                 | Values  |
|-------|-----------------------------|---|
| FFF   | Program flash memory size   | <ul> <li>32 = 32 KB</li> <li>64 = 64 KB</li> <li>128 = 128 KB</li> <li>256 = 256 KB</li> <li>512 = 512 KB</li> <li>1M0 = 1 MB</li> <li>2M0 = 2 MB</li> </ul>  |
| R     | Silicon revision            | <ul> <li>Z = Initial</li> <li>(Blank) = Main</li> <li>A = Revision after main</li> </ul>  |
| Т     | Temperature range (°C)      | <ul> <li>V = -40 to 105</li> <li>C = -40 to 85</li> </ul>   |
| PP    | Package identifier          | <ul> <li>FM = 32 QFN (5 mm x 5 mm)</li> <li>FT = 48 QFN (7 mm x 7 mm)</li> <li>LF = 48 LQFP (7 mm x 7 mm)</li> <li>LH = 64 LQFP (10 mm x 10 mm)</li> <li>MP = 64 MAPBGA (5 mm x 5 mm)</li> <li>LK = 80 LQFP (12 mm x 12 mm)</li> <li>LL = 100 LQFP (14 mm x 14 mm)</li> <li>MC = 121 MAPBGA (8 mm x 8 mm)</li> <li>LQ = 144 LQFP (20 mm x 20 mm)</li> <li>MD = 144 MAPBGA (13 mm x 13 mm)</li> <li>MJ = 256 MAPBGA (17 mm x 17 mm)</li> </ul> |
| CC    | Maximum CPU frequency (MHz) | <ul> <li>5 = 50 MHz</li> <li>7 = 72 MHz</li> <li>10 = 100 MHz</li> <li>12 = 120 MHz</li> <li>15 = 150 MHz</li> </ul>  |
| N     | Packaging type              | R = Tape and reel (Blank) = Trays   |

## 2.4 Example

This is an example part number:

MK10DN512ZVMD10

# 3 Terminology and guidelines

## 3.1 Definition: Operating requirement

An *operating requirement* is a specified value or range of values for a technical characteristic that you must guarantee during operation to avoid incorrect operation and possibly decreasing the useful life of the chip.

K10 Sub-Family Data Sheet Data Sheet, Rev. 7, 02/2013.

#### **3.1.1 Example**

This is an example of an operating requirement:

| Symbol   | Description               | Min. | Max. | Unit |
|----------|---------------------------|------|------|------|
| $V_{DD}$ | 1.0 V core supply voltage | 0.9  | 1.1  | V    |

## 3.2 Definition: Operating behavior

An *operating behavior* is a specified value or range of values for a technical characteristic that are guaranteed during operation if you meet the operating requirements and any other specified conditions.

## 3.2.1 Example

This is an example of an operating behavior:

| Symbol | Description                                  | Min. | Max. | Unit |
|--------|--|------|------|------|
| • • •  | Digital I/O weak pullup/<br>pulldown current | 10   | 130  | μΑ   |

#### 3.3 Definition: Attribute

An *attribute* is a specified value or range of values for a technical characteristic that are guaranteed, regardless of whether you meet the operating requirements.

### 3.3.1 Example

This is an example of an attribute:

| Symbol | Description                     | Min. | Max. | Unit |
|--------|---------------------------------|------|------|------|
| CIN_D  | Input capacitance: digital pins | _    | 7    | pF   |

## 3.4 Definition: Rating

A *rating* is a minimum or maximum value of a technical characteristic that, if exceeded, may cause permanent chip failure:

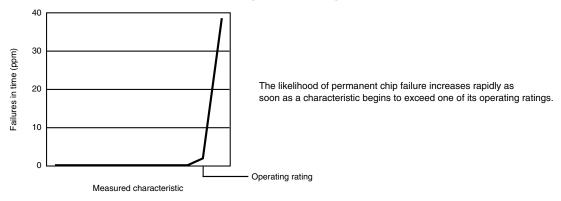

- Operating ratings apply during operation of the chip.
- Handling ratings apply when the chip is not powered.

## **3.4.1 Example**

This is an example of an operating rating:

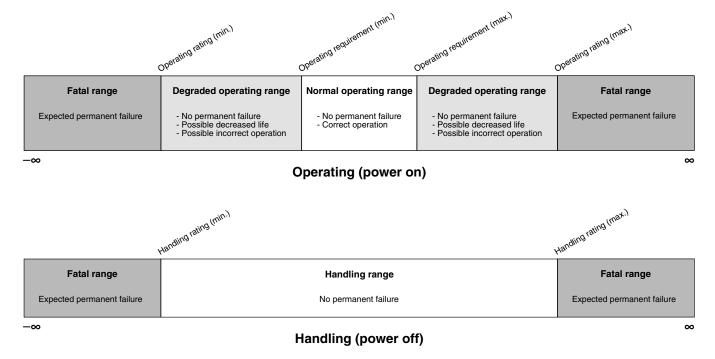

| Symbol   | Description               | Min. | Max. | Unit |
|----------|---------------------------|------|------|------|
| $V_{DD}$ | 1.0 V core supply voltage | -0.3 | 1.2  | V    |

## 3.5 Result of exceeding a rating

## 3.6 Relationship between ratings and operating requirements

## 3.7 Guidelines for ratings and operating requirements

Follow these guidelines for ratings and operating requirements:

- Never exceed any of the chip's ratings.
- During normal operation, don't exceed any of the chip's operating requirements.
- If you must exceed an operating requirement at times other than during normal operation (for example, during power sequencing), limit the duration as much as possible.

## 3.8 Definition: Typical value

A typical value is a specified value for a technical characteristic that:

- Lies within the range of values specified by the operating behavior
- Given the typical manufacturing process, is representative of that characteristic during operation when you meet the typical-value conditions or other specified conditions

Typical values are provided as design guidelines and are neither tested nor guaranteed.

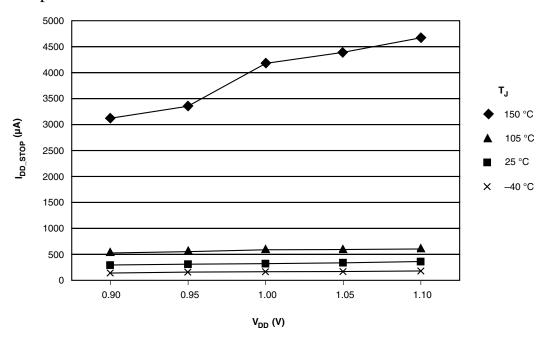

#### 3.8.1 **Example 1**

This is an example of an operating behavior that includes a typical value:

| Symbol          | Description                              | Min. | Тур. | Max. | Unit |
|-----------------|--|------|------|------|------|
| I <sub>WP</sub> | Digital I/O weak pullup/pulldown current | 10   | 70   | 130  | μΑ   |

### 3.8.2 Example 2

This is an example of a chart that shows typical values for various voltage and temperature conditions:

## 3.9 Typical value conditions

Typical values assume you meet the following conditions (or other conditions as specified):

| Symbol         | Description          | Value | Unit |
|----------------|----------------------|-------|------|
| T <sub>A</sub> | Ambient temperature  | 25    | °C   |
| $V_{DD}$       | 3.3 V supply voltage | 3.3   | V    |

## 4 Ratings

## 4.1 Thermal handling ratings

| Symbol           | Description                   | Min.        | Max. | Unit | Notes |
|------------------|-------------------------------|-------------|------|------|-------|
| T <sub>STG</sub> | Storage temperature           | <b>-</b> 55 | 150  | °C   | 1     |
| T <sub>SDR</sub> | Solder temperature, lead-free | _           | 260  | °C   | 2     |
|                  | Solder temperature, leaded    | _           | 245  |      |       |

- 1. Determined according to JEDEC Standard JESD22-A103, High Temperature Storage Life.
- 2. Determined according to IPC/JEDEC Standard J-STD-020, Moisture/Reflow Sensitivity Classification for Nonhermetic Solid State Surface Mount Devices.

## 4.2 Moisture handling ratings

| Symbol | Description                | Min. | Max. | Unit | Notes |
|--------|----------------------------|------|------|------|-------|
| MSL    | Moisture sensitivity level | _    | 3    | _    | 1     |

<sup>1.</sup> Determined according to IPC/JEDEC Standard J-STD-020, Moisture/Reflow Sensitivity Classification for Nonhermetic Solid State Surface Mount Devices.

## 4.3 ESD handling ratings

| Symbol           | Description   | Min.  | Max.  | Unit | Notes |
|------------------|---|-------|-------|------|-------|
| V <sub>HBM</sub> | Electrostatic discharge voltage, human body model     | -2000 | +2000 | V    | 1     |
| V <sub>CDM</sub> | Electrostatic discharge voltage, charged-device model | -500  | +500  | V    | 2     |
| I <sub>LAT</sub> | Latch-up current at ambient temperature of 105°C      | -100  | +100  | mA   | 3     |

- 1. Determined according to JEDEC Standard JESD22-A114, *Electrostatic Discharge (ESD) Sensitivity Testing Human Body Model (HBM)*.
- 2. Determined according to JEDEC Standard JESD22-C101, Field-Induced Charged-Device Model Test Method for Electrostatic-Discharge-Withstand Thresholds of Microelectronic Components.
- 3. Determined according to JEDEC Standard JESD78, IC Latch-Up Test.

## 4.4 Voltage and current operating ratings

#### General

| Symbol           | Description  | Min.                  | Max.                  | Unit |
|------------------|--|-----------------------|-----------------------|------|
| $V_{DD}$         | Digital supply voltage   | -0.3                  | 3.8                   | V    |
| I <sub>DD</sub>  | Digital supply current   | _                     | 185                   | mA   |
| V <sub>DIO</sub> | Digital input voltage (except RESET, EXTAL, and XTAL)          | -0.3                  | 5.5                   | V    |
| V <sub>AIO</sub> | Analog <sup>1</sup> , RESET, EXTAL, and XTAL input voltage     | -0.3                  | V <sub>DD</sub> + 0.3 | V    |
| I <sub>D</sub>   | Maximum current single pin limit (applies to all digital pins) | -25                   | 25                    | mA   |
| $V_{DDA}$        | Analog supply voltage  | V <sub>DD</sub> – 0.3 | V <sub>DD</sub> + 0.3 | V    |
| V <sub>BAT</sub> | RTC battery supply voltage                                     | -0.3                  | 3.8                   | V    |

1. Analog pins are defined as pins that do not have an associated general purpose I/O port function.

#### 5 General

#### 5.1 AC electrical characteristics

Unless otherwise specified, propagation delays are measured from the 50% to the 50% point, and rise and fall times are measured at the 20% and 80% points, as shown in the following figure.

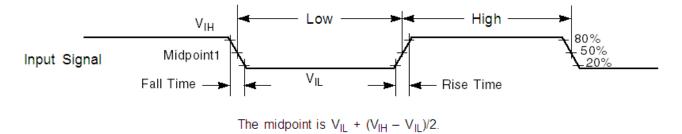

Figure 1. Input signal measurement reference

All digital I/O switching characteristics assume:

- 1. output pins
  - have C<sub>L</sub>=30pF loads,
  - are configured for fast slew rate (PORTx\_PCRn[SRE]=0), and
  - are configured for high drive strength (PORTx\_PCRn[DSE]=1)
- 2. input pins
  - have their passive filter disabled (PORTx\_PCRn[PFE]=0)

## 5.2 Nonswitching electrical specifications

K10 Sub-Family Data Sheet Data Sheet, Rev. 7, 02/2013.

## 5.2.1 Voltage and current operating requirements

#### Table 1. Voltage and current operating requirements

| Symbol                             | Description   | Min.                  | Max.                 | Unit | Notes |
|------------------------------------|---|-----------------------|----------------------|------|-------|
| V <sub>DD</sub>                    | Supply voltage  | 1.71                  | 3.6                  | V    |       |
| $V_{DDA}$                          | Analog supply voltage   | 1.71                  | 3.6                  | ٧    |       |
| $V_{\rm DD} - V_{\rm DDA}$         | V <sub>DD</sub> -to-V <sub>DDA</sub> differential voltage   | -0.1                  | 0.1                  | ٧    |       |
| V <sub>SS</sub> – V <sub>SSA</sub> | V <sub>SS</sub> -to-V <sub>SSA</sub> differential voltage   | -0.1                  | 0.1                  | V    |       |
| V <sub>BAT</sub>                   | RTC battery supply voltage  | 1.71                  | 3.6                  | V    |       |
| V <sub>IH</sub>                    | Input high voltage  |                       |                      |      |       |
|                                    | • 2.7 V ≤ V <sub>DD</sub> ≤ 3.6 V   | $0.7 \times V_{DD}$   | _                    | V    |       |
|                                    | • 1.7 V ≤ V <sub>DD</sub> ≤ 2.7 V   | $0.75 \times V_{DD}$  | _                    | V    |       |

- All 5 V tolerant digital I/O pins are internally clamped to V<sub>SS</sub> through an ESD protection diode. There is no diode connection to V<sub>DD</sub>. If V<sub>IN</sub> is less than V<sub>DIO\_MIN</sub>, a current limiting resistor is required. The negative DC injection current limiting resistor is calculated as R=(V<sub>DIO\_MIN</sub>-V<sub>IN</sub>)/II<sub>ICDIO</sub>I.
- 2. Analog pins are defined as pins that do not have an associated general purpose I/O port function. Additionally, EXTAL and XTAL are analog pins.
- 3. All analog pins are internally clamped to V<sub>SS</sub> and V<sub>DD</sub> through ESD protection diodes. If V<sub>IN</sub> is less than V<sub>AIO\_MIN</sub> or greater than V<sub>AIO\_MAX</sub>, a current limiting resistor is required. The negative DC injection current limiting resistor is calculated as R=(V<sub>AIO\_MIN</sub>-V<sub>IN</sub>)/II<sub>ICAIO</sub>I. The positive injection current limiting resistor is calculated as R=(V<sub>IN</sub>-V<sub>AIO\_MAX</sub>)/II<sub>ICAIO</sub>I. Select the larger of these two calculated resistances if the pin is exposed to positive and negative injection currents.
- 4. Open drain outputs must be pulled to VDD.

#### Genera

## 5.2.2 LVD and POR operating requirements

### Table 2. V<sub>DD</sub> supply LVD and POR operating requirements

| Symbol             | Description   | Min. | Тур. | Max. | Unit | Notes |
|--------------------|---|------|------|------|------|-------|
| V <sub>POR</sub>   | Falling VDD POR detect voltage                              | 0.8  | 1.1  | 1.5  | V    |       |
| $V_{LVDH}$         | Falling low-voltage detect threshold — high range (LVDV=01) | 2.48 | 2.56 | 2.64 | V    |       |
|                    | Low-voltage warning thresholds — high range                 |      |      |      |      | 1     |
| $V_{LVW1H}$        | Level 1 falling (LVWV=00)                                   | 2.62 | 2.70 | 2.78 | V    |       |
| $V_{LVW2H}$        | Level 2 falling (LVWV=01)                                   | 2.72 | 2.80 | 2.88 | V    |       |
| $V_{LVW3H}$        | Level 3 falling (LVWV=10)                                   | 2.82 | 2.90 | 2.98 | V    |       |
| $V_{\text{LVW4H}}$ | Level 4 falling (LVWV=11)                                   | 2.92 | 3.00 | 3.08 | V    |       |
| V <sub>HYSH</sub>  | Low-voltage inhibit reset/recover hysteresis — high range   | _    | ±80  | _    | mV   |       |
| V <sub>LVDL</sub>  | Falling low-voltage detect threshold — low range (LVDV=00)  | 1.54 | 1.60 | 1.66 | V    |       |
|                    | Low-voltage warning thresholds — low range                  |      |      |      |      | 1     |
| $V_{LVW1L}$        | Level 1 falling (LVWV=00)                                   | 1.74 | 1.80 | 1.86 | V    |       |
| $V_{LVW2L}$        | Level 2 falling (LVWV=01)                                   | 1.84 | 1.90 | 1.96 | V    |       |
| $V_{\text{LVW3L}}$ | Level 3 falling (LVWV=10)                                   | 1.94 | 2.00 | 2.06 | V    |       |
| $V_{LVW4L}$        | Level 4 falling (LVWV=11)                                   | 2.04 | 2.10 | 2.16 | V    |       |
| V <sub>HYSL</sub>  | Low-voltage inhibit reset/recover hysteresis — low range    | _    | ±60  | _    | mV   |       |
| $V_{BG}$           | Bandgap voltage reference                                   | 0.97 | 1.00 | 1.03 | V    |       |
| t <sub>LPO</sub>   | Internal low power oscillator period — factory trimmed      | 900  | 1000 | 1100 | μs   |       |

<sup>1.</sup> Rising thresholds are falling threshold + hysteresis voltage

#### Table 3. VBAT power operating requirements

| Symbol                | Description                            | Min. | Тур. | Max. | Unit | Notes |
|-----------------------|--|------|------|------|------|-------|
| V <sub>POR_VBAT</sub> | Falling VBAT supply POR detect voltage | 0.8  | 1.1  | 1.5  | V    |       |

- 1. Typical values characterized at 25°C and VDD = 3.6 V unless otherwise noted.
- 2. Open drain outputs must be pulled to V<sub>DD</sub>.
- 3. Analog pins are defined as pins that do not have an associated general purpose I/O port function.
- 4. Digital pins have an associated GPIO port function and have 5V tolerant inputs, except EXTAL and XTAL.
- 5. Internal pull-up/pull-down resistors disabled.
- 6. Characterized, not tested in production.
- 7. Examples calculated using  $V_{IL}$  relation,  $V_{DD}$ , and max  $I_{IND}$ :  $Z_{IND} = V_{IL}/I_{IND}$ . This is the impedance needed to pull a high signal to a level below  $V_{IL}$  due to leakage when  $V_{IL} < V_{IN} < V_{DD}$ . These examples assume signal source low = 0 V.
- 8. Measured at  $V_{DD}$  supply voltage =  $V_{DD}$  min and Vinput =  $V_{SS}$
- 9. Measured at  $V_{DD}$  supply voltage =  $V_{DD}$  min and Vinput =  $V_{DD}$

#### 5.2.4 Power mode transition operating behaviors

All specifications except  $t_{POR}$ , and VLLSx $\rightarrow$ RUN recovery times in the following table assume this clock configuration:

- CPU and system clocks = 100 MHz
- Bus clock = 50 MHz
- FlexBus clock = 50 MHz
- Flash clock = 25 MHz
- MCG mode: FEI

Table 5. Power mode transition operating behaviors

| Symbol           | Description   | Min. | Max.                                | Unit | Notes |
|------------------|---|------|-------------------------------------|------|-------|
| t <sub>POR</sub> | After a POR event, amount of time from the point V <sub>DD</sub> reaches 1.71 V to execution of the first instruction across the operating temperature range of the chip. |      |                                     | μs   | 1     |
|                  | <ul> <li>V<sub>DD</sub> slew rate ≥ 5.7 kV/s</li> </ul>   | _    | 300                                 |      |       |
|                  | V <sub>DD</sub> slew rate < 5.7 kV/s  | _    | 1.7 V / (V <sub>DD</sub> slew rate) |      |       |
|                  | • VLLS1 → RUN   | _    | 134                                 | μs   |       |
|                  | VLLS2 → RUN   | _    | 96                                  | μs   |       |
|                  | VLLS3 → RUN   | _    | 96                                  | μs   |       |
|                  | • LLS → RUN   | _    | 6.2                                 | μs   |       |
|                  | VLPS → RUN  | _    | 5.9                                 | μs   |       |
|                  | • STOP → RUN  | _    | 5.9                                 | μs   |       |

<sup>1.</sup> Normal boot (FTFL\_OPT[LPBOOT]=1)

## 5.2.5 Power consumption operating behaviors

Table 6. Power consumption operating behaviors

| Symbol               | Description   | Min. | Тур. | Max.     | Unit | Notes |
|----------------------|---|------|------|----------|------|-------|

- 1. The analog supply current is the sum of the active or disabled current for each of the analog modules on the device. See each module's specification for its supply current.
- 100MHz core and system clock, 50MHz bus and FlexBus clock, and 25MHz flash clock. MCG configured for FEI mode. All peripheral clocks disabled.
- 3. 100MHz core and system clock, 50MHz bus and FlexBus clock, and 25MHz flash clock. MCG configured for FEI mode. All peripheral clocks enabled.
- 4. Max values are measured with CPU executing DSP instructions.
- 5. 25MHz core and system clock, 25MHz bus clock, and 12.5MHz FlexBus and flash clock. MCG configured for FEI mode.
- 2 MHz core, system, FlexBus, and bus clock and 1MHz flash clock. MCG configured for BLPE mode. All peripheral clocks disabled. Code executing from flash.
- 7. 2 MHz core, system, FlexBus, and bus clock and 1MHz flash clock. MCG configured for BLPE mode. All peripheral clocks enabled but peripherals are not in active operation. Code executing from flash.
- 8. 2 MHz core, system, FlexBus, and bus clock and 1MHz flash clock. MCG configured for BLPE mode. All peripheral clocks disabled.
- 9. Data reflects devices with 128 KB of RAM.
- 10. Includes 32kHz oscillator current and RTC operation.

### 5.2.5.1 Diagram: Typical IDD\_RUN operating behavior

The following data was measured under these conditions:

- MCG in FBE mode for 50 MHz and lower frequencies. MCG in FEE mode at greater than 50 MHz frequencies.
- No GPIOs toggled
- Code execution from flash with cache enabled
- For the ALLOFF curve, all peripheral clocks are disabled except FTFL

#### General

#### 5.2.6 EMC radiated emissions operating behaviors

# Table 7. EMC radiated emissions operating behaviors as measured on 144LQFP and 144MAPBGA packages

| Symbol              | Description                        | Frequency<br>band (MHz) | 144LQFP | 144MAPBGA | Unit | Notes |
|---------------------|------------------------------------|-------------------------|---------|-----------|------|-------|
| V <sub>RE1</sub>    | Radiated emissions voltage, band 1 | 0.15–50                 | 23      | 12        | dΒμV | 1,2   |
| V <sub>RE2</sub>    | Radiated emissions voltage, band 2 | 50–150                  | 27      | 24        | dΒμV |       |
| V <sub>RE3</sub>    | Radiated emissions voltage, band 3 | 150–500                 | 28      | 27        | dΒμV |       |
| V <sub>RE4</sub>    | Radiated emissions voltage, band 4 | 500-1000                | 14      | 11        | dΒμV |       |
| V <sub>RE_IEC</sub> | IEC level                          | 0.15-1000               | K       | K         |      | 2, 3  |

Determined according to IEC Standard 61967-1, Integrated Circuits - Measurement of Electromagnetic Emissions, 150
kHz to 1 GHz Part 1: General Conditions and Definitions and IEC Standard 61967-2, Integrated Circuits - Measurement of
Electromagnetic Emissions, 150 kHz to 1 GHz Part 2: Measurement of Radiated Emissions—TEM Cell and Wideband
TEM Cell Method. Measurements were made while the microcontroller was running basic application code. The reported
emission level is the value of the maximum measured emission, rounded up to the next whole number, from among the
measured orientations in each frequency range.

K10 Sub-Family Data Sheet Data Sheet, Rev. 7, 02/2013.

- 2.  $V_{DD} = 3.3 \text{ V}$ ,  $T_A = 25 \,^{\circ}\text{C}$ ,  $f_{OSC} = 12 \,^{\circ}\text{MHz}$  (crystal),  $f_{SYS} = 96 \,^{\circ}\text{MHz}$ ,  $f_{BUS} = 48 \,^{\circ}\text{MHz}$
- 3. Specified according to Annex D of IEC Standard 61967-2, Measurement of Radiated Emissions—TEM Cell and Wideband TEM Cell Method

## 5.2.7 Designing with radiated emissions in mind

To find application notes that provide guidance on designing your system to minimize interference from radiated emissions:

- 1. Go to www.freescale.com.
- 2. Perform a keyword search for "EMC design."

#### 5.2.8 Capacitance attributes

Table 8. Capacitance attributes

| Symbol            | Description                     | Min. | Max. | Unit |
|-------------------|---------------------------------|------|------|------|
| C <sub>IN_A</sub> | Input capacitance: analog pins  | _    | 7    | pF   |
| C <sub>IN_D</sub> | Input capacitance: digital pins | _    | 7    | pF   |

## 5.3 Switching specifications

#### 5.3.1 Device clock specifications

Table 9. Device clock specifications

| Symbol             | Description           | Min. | Max. | Unit | Notes |
|--------------------|-----------------------|------|------|------|-------|
|                    | Normal run mode       |      |      |      |       |
| f <sub>SYS</sub>   | System and core clock | _    | 100  | MHz  |       |
| f <sub>BUS</sub>   | Bus clock             | _    | 50   | MHz  |       |
| FB_CLK             | FlexBus clock         | _    | 50   | MHz  |       |
| f <sub>FLASH</sub> | Flash clock           | _    | 25   | MHz  |       |
| f <sub>LPTMR</sub> | LPTMR clock           | _    | 25   | MHz  |       |

## 5.3.2 General switching specifications

These general purpose specifications apply to all signals configured for GPIO, UART, CAN, CMT, and I<sup>2</sup>C signals.

#### Genera

Table 10. General switching specifications

| Symbol | Description  | Min. | Max. | Unit             | Notes |
|--------|--|------|------|------------------|-------|
|        | GPIO pin interrupt pulse width (digital glitch filter disabled) — Synchronous path   | 1.5  | _    | Bus clock cycles | 1, 2  |
|        | GPIO pin interrupt pulse width (digital glitch filter disabled, analog filter enabled) — Asynchronous path   | 100  | _    | ns               | 3     |
|        | GPIO pin interrupt pulse width (digital glitch filter disabled, analog filter disabled) — Asynchronous path  | 16   | _    | ns               | 3     |

|        | • 1.71 ≤ V <sub>DD</sub> ≤ 2.7V  | _    | 36   | ns               |       |
|        | • 2.7 ≤ V <sub>DD</sub> ≤ 3.6V   | _    | 24   | ns               |       |
|        | I and the second |      |      | 1                |       |

<sup>1.</sup> This is the minimum pulse width that is guaranteed to pass through the pin synchronization circuitry. Shorter pulses may or may not be recognized. In Stop, VLPS, LLS, and VLLSx modes, the synchronizer is bypassed so shorter pulses can be recognized in that case.

## 5.4 Thermal specifications

<sup>2.</sup> The greater synchronous and asynchronous timing must be met.

<sup>3.</sup> This is the minimum pulse width that is guaranteed to be recognized as a pin interrupt request in Stop, VLPS, LLS, and VLLSx modes.

<sup>4. 75</sup> pF load

<sup>5. 15</sup> pF load

### 5.4.1 Thermal operating requirements

#### Table 11. Thermal operating requirements

| Symbol         | Description              | Min. | Max. | Unit |
|----------------|--------------------------|------|------|------|
| T <sub>J</sub> | Die junction temperature | -40  | 125  | °C   |
| T <sub>A</sub> | Ambient temperature      | -40  | 105  | °C   |

#### 5.4.2 Thermal attributes

| Board type        | Symbol            | Description   | 100 LQFP | Unit | Notes |
|-------------------|-------------------|---|----------|------|-------|
| Single-layer (1s) | $R_{	heta JA}$    | Thermal resistance, junction to ambient (natural convection)                                    | 47       | °C/W | 1     |
| Four-layer (2s2p) | $R_{\theta JA}$   | Thermal resistance, junction to ambient (natural convection)                                    | 35       | °C/W | 1     |
| Single-layer (1s) | R <sub>0JMA</sub> | Thermal resistance, junction to ambient (200 ft./ min. air speed)                               | 37       | °C/W | 1     |
| Four-layer (2s2p) | R <sub>0JMA</sub> | Thermal resistance, junction to ambient (200 ft./ min. air speed)                               | 29       | °C/W | 1     |
| _                 | R <sub>0JB</sub>  | Thermal resistance, junction to board   | 20       | °C/W | 2     |
| _                 | R <sub>θJC</sub>  | Thermal resistance, junction to case  | 9        | °C/W | 3     |
| _                 | $\Psi_{ m JT}$    | Thermal characterization parameter, junction to package top outside center (natural convection) | 2        | °C/W | 4     |

- 1. Determined according to JEDEC Standard JESD51-2, Integrated Circuits Thermal Test Method Environmental Conditions—Natural Convection (Still Air), or EIA/JEDEC Standard JESD51-6, Integrated Circuit Thermal Test Method Environmental Conditions—Forced Convection (Moving Air).
- 2. Determined according to JEDEC Standard JESD51-8, Integrated Circuit Thermal Test Method Environmental Conditions—Junction-to-Board.
- 3. Determined according to Method 1012.1 of MIL-STD 883, *Test Method Standard, Microcircuits*, with the cold plate temperature used for the case temperature. The value includes the thermal resistance of the interface material between the top of the package and the cold plate.
- 4. Determined according to JEDEC Standard JESD51-2, *Integrated Circuits Thermal Test Method Environmental Conditions—Natural Convection (Still Air)*.

## 6 Peripheral operating requirements and behaviors

#### 6.1 Core modules

### 6.1.1 Debug trace timing specifications

Table 12. Debug trace operating behaviors

| Symbol           | Description              | Min.      | Max. | Unit |
|------------------|--------------------------|-----------|------|------|
| T <sub>cyc</sub> | Clock period             | Frequency | MHz  |      |
| $T_{wl}$         | Low pulse width          | 2         | _    | ns   |
| T <sub>wh</sub>  | High pulse width         | 2         | _    | ns   |
| T <sub>r</sub>   | Clock and data rise time | _         | 3    | ns   |
| T <sub>f</sub>   | Clock and data fall time | _         | 3    | ns   |
| Ts               | Data setup               | 3         | _    | ns   |
| T <sub>h</sub>   | Data hold                | 2         | _    | ns   |

- 1. This parameter is measured with the internal reference (slow clock) being used as a reference to the FLL (FEI clock mode).
- 2. These typical values listed are with the slow internal reference clock (FEI) using factory trim and DMX32=0.
- 3. The resulting system clock frequencies should not exceed their maximum specified values. The DCO frequency deviation (Δf<sub>dco t</sub>) over voltage and temperature should be considered.
- 4. These typical values listed are with the slow internal reference clock (FEI) using factory trim and DMX32=1.
- 5. The resulting clock frequency must not exceed the maximum specified clock frequency of the device.
- 6. This specification applies to any time the FLL reference source or reference divider is changed, trim value is changed, DMX32 bit is changed, DRS bits are changed, or changing from FLL disabled (BLPE, BLPI) to FLL enabled (FEI, FEE, FBE, FBI). If a crystal/resonator is being used as the reference, this specification assumes it is already running.
- 7. Excludes any oscillator currents that are also consuming power while PLL is in operation.
- 8. This specification was obtained using a Freescale developed PCB. PLL jitter is dependent on the noise characteristics of each PCB and results will vary.
- This specification applies to any time the PLL VCO divider or reference divider is changed, or changing from PLL disabled (BLPE, BLPI) to PLL enabled (PBE, PEE). If a crystal/resonator is being used as the reference, this specification assumes it is already running.

#### 6.3.2 Oscillator electrical specifications

This section provides the electrical characteristics of the module.

reripheral operating requirements and behaviors

# 6.3.2.1 Oscillator DC electrical specifications Table 16. Oscillator DC electrical specifications

| Symbol             | Description  | Min. | Тур. | Max. | Unit | Notes |
|--------------------|--|------|------|------|------|-------|
| V <sub>DD</sub>    | Supply voltage   | 1.71 | _    | 3.6  | V    |       |

### Table 16. Oscillator DC electrical specifications (continued)

| Symbol                       | Description  | Min. | Тур.            | Max. | Unit | Notes |
|------------------------------|--|------|-----------------|------|------|-------|
| V <sub>pp</sub> <sup>5</sup> | Peak-to-peak amplitude of oscillation (oscillator mode) — low-frequency, low-power mode (HGO=0)  | _    | 0.6             | _    | V    |       |
|                              | Peak-to-peak amplitude of oscillation (oscillator mode) — low-frequency, high-gain mode (HGO=1)  | _    | V <sub>DD</sub> | _    | V    |       |
|                              | Peak-to-peak amplitude of oscillation (oscillator mode) — high-frequency, low-power mode (HGO=0) | _    | 0.6             | _    | V    |       |
|                              | Peak-to-peak amplitude of oscillation (oscillator mode) — high-frequency, high-gain mode (HGO=1) | _    | V <sub>DD</sub> | _    | V    |       |

- 1.  $V_{DD}$ =3.3 V, Temperature =25 °C
- 2. See crystal or resonator manufacturer's recommendation
- 3.  $C_x$ ,  $C_y$  can be provided by using either the integrated capacitors or by using external components.
- 4. When low power mode is selected, R<sub>F</sub> is integrated and must not be attached externally.
- 5. The EXTAL and XTAL pins should only be connected to required oscillator components and must not be connected to any other devices.

# 6.3.2.2 Oscillator frequency specifications Table 17. Oscillator frequency specifications

| Symbol                | Description   | Min. | Тур. | Max. | Unit | Notes |
|-----------------------|---|------|------|------|------|-------|
| f <sub>osc_lo</sub>   | Oscillator crystal or resonator frequency — low frequency mode (MCG_C2[RANGE]=00)               | 32   | _    | 40   | kHz  |       |
| f <sub>osc_hi_1</sub> | Oscillator crystal or resonator frequency — high frequency mode (low range) (MCG_C2[RANGE]=01)  | 3    | _    | 8    | MHz  |       |
| f <sub>osc_hi_2</sub> | Oscillator crystal or resonator frequency — high frequency mode (high range) (MCG_C2[RANGE]=1x) | 8    | _    | 32   | MHz  |       |
| f <sub>ec_extal</sub> | Input clock frequency (external clock mode)   | _    | _    | 50   | MHz  | 1, 2  |
| t <sub>dc_extal</sub> | Input clock duty cycle (external clock mode)  | 40   | 50   | 60   | %    |       |
| t <sub>cst</sub>      | Crystal startup time — 32 kHz low-frequency, low-power mode (HGO=0)                             | _    | 750  | _    | ms   | 3, 4  |
|                       | Crystal startup time — 32 kHz low-frequency, high-gain mode (HGO=1)                             | _    | 250  | _    | ms   |       |
|                       | Crystal startup time — 8 MHz high-frequency (MCG_C2[RANGE]=01), low-power mode (HGO=0)          | _    | 0.6  | _    | ms   |       |
|                       | Crystal startup time — 8 MHz high-frequency (MCG_C2[RANGE]=01), high-gain mode (HGO=1)          | _    | 1    | _    | ms   |       |

- 1. Other frequency limits may apply when external clock is being used as a reference for the FLL or PLL.
- 2. When transitioning from FBE to FEI mode, restrict the frequency of the input clock so that, when it is divided by FRDIV, it remains within the limits of the DCO input clock frequency.
- 3. Proper PC board layout procedures must be followed to achieve specifications.

#### K10 Sub-Family Data Sheet Data Sheet, Rev. 7, 02/2013.

#### reripheral operating requirements and behaviors

4. Crystal startup time is defined as the time between the oscillator being enabled and the OSCINIT bit in the MCG\_S register being set.

#### NOTE

The 32 kHz oscillator works in low power mode by default and cannot be moved into high power/gain mode.

#### 6.3.3 32 kHz Oscillator Electrical Characteristics

This section describes the module electrical characteristics.

# 6.3.3.1 32 kHz oscillator DC electrical specifications Table 18. 32kHz oscillator DC electrical specifications

| Symbol                       | Description                                   | Min. | Тур. | Max. | Unit |
|------------------------------|---|------|------|------|------|
| V <sub>BAT</sub>             | Supply voltage                                | 1.71 | _    | 3.6  | V    |
| R <sub>F</sub>               | Internal feedback resistor                    | _    | 100  | _    | ΜΩ   |
| C <sub>para</sub>            | Parasitical capacitance of EXTAL32 and XTAL32 | _    | 5    | 7    | pF   |
| V <sub>pp</sub> <sup>1</sup> | Peak-to-peak amplitude of oscillation         | _    | 0.6  | _    | V    |

<sup>1.</sup> When a crystal is being used with the 32 kHz oscillator, the EXTAL32 and XTAL32 pins should only be connected to required oscillator components and must not be connected to any other devices.

# 6.3.3.2 32 kHz oscillator frequency specifications Table 19. 32 kHz oscillator frequency specifications

| Symbol                  | Description                               | Min. | Тур.   | Max.      | Unit | Notes |
|-------------------------|---|------|--------|-----------|------|-------|
| f <sub>osc_lo</sub>     | Oscillator crystal                        | _    | 32.768 | _         | kHz  |       |
| t <sub>start</sub>      | Crystal start-up time                     | _    | 1000   |           | ms   | 1     |
| f <sub>ec_extal32</sub> | Externally provided input clock frequency | _    | 32.768 | _         | kHz  | 2     |
| V <sub>ec_extal32</sub> | Externally provided input clock amplitude | 700  | _      | $V_{BAT}$ | mV   | 2, 3  |

- 1. Proper PC board layout procedures must be followed to achieve specifications.
- This specification is for an externally supplied clock driven to EXTAL32 and does not apply to any other clock input. The oscillator remains enabled and XTAL32 must be left unconnected.
- The parameter specified is a peak-to-peak value and V<sub>IH</sub> and V<sub>IL</sub> specifications do not apply. The voltage of the applied clock must be within the range of V<sub>SS</sub> to V<sub>BAT</sub>.

## 6.4 Memories and memory interfaces

### 6.4.1 Flash electrical specifications

This section describes the electrical characteristics of the flash memory module.

#### 6.4.1.1 Flash timing specifications — program and erase

The following specifications represent the amount of time the internal charge pumps are active and do not include command overhead.

Table 20. NVM program/erase timing specifications

| Symbol                    | Description                              | Min. | Тур. | Max. | Unit | Notes |
|---------------------------|--|------|------|------|------|-------|
| t <sub>hvpgm4</sub>       | Longword Program high-voltage time       | _    | 7.5  | 18   | μs   |       |
| t <sub>hversscr</sub>     | Sector Erase high-voltage time           | _    | 13   | 113  | ms   | 1     |
| t <sub>hversblk256k</sub> | Erase Block high-voltage time for 256 KB | _    | 416  | 3616 | ms   | 1     |

<sup>1.</sup> Maximum time based on expectations at cycling end-of-life.

# 6.4.1.2 Flash timing specifications — commands Table 21. Flash command timing specifications

| Symbol                  | Description                                   | Min. | Тур. | Max. | Unit | Notes |
|-------------------------|---|------|------|------|------|-------|
|                         | Read 1s Block execution time                  |      |      |      |      |       |
| t <sub>rd1blk256k</sub> | 256 KB program/data flash                     | _    | -    | 1.7  | ms   |       |
| t <sub>rd1sec2k</sub>   | Read 1s Section execution time (flash sector) | _    | _    | 60   | μs   | 1     |
| t <sub>pgmchk</sub>     | Program Check execution time                  |      | _    | 45   | μs   | 1     |
| t <sub>rdrsrc</sub>     | Read Resource execution time                  |      | _    | 30   | μs   | 1     |
| t <sub>pgm4</sub>       | Program Longword execution time               | _    | 65   | 145  | μs   |       |
|                         | Erase Flash Block execution time              |      |      |      |      | 2     |
| t <sub>ersblk256k</sub> | 256 KB program/data flash                     | _    | 435  | 3700 | ms   |       |
| t <sub>ersscr</sub>     | Erase Flash Sector execution time             | _    | 14   | 114  | ms   | 2     |
|                         | Program Section execution time                |      |      |      |      |       |
| t <sub>pgmsec512</sub>  | 512 bytes flash                               | _    | 2.4  | _    | ms   |       |
| t <sub>pgmsec1k</sub>   | 1 KB flash                                    | _    | 4.7  | _    | ms   |       |
| t <sub>pgmsec2k</sub>   | 2 KB flash                                    | _    | 9.3  | _    | ms   |       |
| t <sub>rd1all</sub>     | Read 1s All Blocks execution time             | _    | _    | 1.8  | ms   |       |
| t <sub>rdonce</sub>     | Read Once execution time                      | _    | _    | 25   | μs   | 1     |
| t <sub>pgmonce</sub>    | Program Once execution time                   | _    | 65   | _    | μs   |       |
| t <sub>ersall</sub>     | Erase All Blocks execution time               | _    | 870  | 7400 | ms   | 2     |
| t <sub>vfykey</sub>     | Verify Backdoor Access Key execution time     | _    | _    | 30   | μs   | 1     |

reripheral operating requirements and behaviors

Table 21. Flash command timing specifications (continued)

| Symbol               | Description                 | Min. | Тур. | Max. | Unit | Notes |
|----------------------|-----------------------------|------|------|------|------|-------|
|                      | Swap Control execution time |      |      |      |      |       |
| t <sub>swapx01</sub> | control code 0x01           | _    | 200  | _    | μs   |       |
| t <sub>swapx02</sub> | control code 0x02           | _    | 70   | 150  | μs   |       |
| t <sub>swapx04</sub> | control code 0x04           | _    | 70   | 150  | μs   |       |
| t <sub>swapx08</sub> | control code 0x08           | _    | _    | 30   | μs   |       |

- 1. Assumes 25 MHz flash clock frequency.
- 2. Maximum times for erase parameters based on expectations at cycling end-of-life.

# 6.4.1.3 Flash high voltage current behaviors Table 22. Flash high voltage current behaviors

| Symbol              | Description   | Min. | Тур. | Max. | Unit |
|---------------------|---|------|------|------|------|
| I <sub>DD_PGM</sub> | Average current adder during high voltage flash programming operation | _    | 2.5  | 6.0  | mA   |
| I <sub>DD_ERS</sub> | Average current adder during high voltage flash erase operation       | _    | 1.5  | 4.0  | mA   |

## 6.4.1.4 Reliability specifications

#### Table 23. NVM reliability specifications

| Symbol                  | Description                            | Min.    | Typ. <sup>1</sup> | Max. | Unit   | Notes |
|-------------------------|--|---------|-------------------|------|--------|-------|
|                         | Prograr                                | n Flash |                   |      |        |       |
| t <sub>nvmretp10k</sub> | Data retention after up to 10 K cycles | 5       | 50                | _    | years  |       |
| t <sub>nvmretp1k</sub>  | Data retention after up to 1 K cycles  | 20      | 100               | _    | years  |       |
| n <sub>nvmcycp</sub>    | Cycling endurance                      | 10 K    | 50 K              | _    | cycles | 2     |

<sup>1.</sup> Typical data retention values are based on measured response accelerated at high temperature and derated to a constant 25°C use profile. Engineering Bulletin EB618 does not apply to this technology. Typical endurance defined in Engineering Bulletin EB619.

## 6.4.2 EzPort Switching Specifications

Table 24. EzPort switching specifications

| Num | Description  | Min. | Max.                | Unit |
|-----|--|------|---------------------|------|
|     | Operating voltage  | 1.71 | 3.6                 | V    |
| EP1 | EZP_CK frequency of operation (all commands except READ) | _    | f <sub>SYS</sub> /2 | MHz  |

Table continues on the next page...

K10 Sub-Family Data Sheet Data Sheet, Rev. 7, 02/2013.

<sup>2.</sup> Cycling endurance represents number of program/erase cycles at -40°C  $\leq$  T<sub>i</sub>  $\leq$  125°C.

| Table 24. | EzPort switching specifica | tions (conti | nued) |
|-----------|----------------------------|--------------|-------|
| 4!        |                            | NA:          | N/I   |

| Num  | Description                                  | Min.                    | Max.                | Unit |
|------|--|-------------------------|---------------------|------|
| EP1a | EZP_CK frequency of operation (READ command) | _                       | f <sub>SYS</sub> /8 | MHz  |
| EP2  | EZP_CS negation to next EZP_CS assertion     | 2 x t <sub>EZP_CK</sub> | _                   | ns   |
| EP3  | EZP_CS input valid to EZP_CK high (setup)    | 5                       | _                   | ns   |

## 6.4.3 Flexbus Switching Specifications

All processor bus timings are synchronous; input setup/hold and output delay are given in respect to the rising edge of a reference clock, FB\_CLK. The FB\_CLK frequency may be the same as the internal system bus frequency or an integer divider of that frequency.

#### reripheral operating requirements and behaviors

The following timing numbers indicate when data is latched or driven onto the external bus, relative to the Flexbus output clock (FB\_CLK). All other timing relationships can be derived from these values.

Table 25. Flexbus limited voltage range switching specifications

| Num | Description                             | Min. | Max.   | Unit | Notes |
|-----|---|------|--------|------|-------|
|     | Operating voltage                       | 2.7  | 3.6    | V    |       |
|     | Frequency of operation                  | _    | FB_CLK | MHz  |       |
| FB1 | Clock period                            | 20   | _      | ns   |       |
| FB2 | Address, data, and control output valid | _    | 11.5   | ns   | 1     |
| FB3 | Address, data, and control output hold  | 0.5  | _      | ns   | 1     |
| FB4 | Data and FB_TA input setup              | 8.5  | _      | ns   | 2     |
| FB5 | Data and FB_TA input hold               | 0.5  | _      | ns   | 2     |

<sup>1.</sup> Specification is valid for all FB\_AD[31:0], FB\_BE/BWEn, FB\_CSn, FB\_OE, FB\_R/W,FB\_TBST, FB\_TSIZ[1:0], FB\_ALE, and FB\_TS.

Table 26. Flexbus full voltage range switching specifications

| Num | Description                             | Min.     | Max.   | Unit | Notes |  |
|-----|---|----------|--------|------|-------|--|
|     | Operating voltage                       | 1.71     | 3.6    | V    |       |  |
|     | Frequency of operation                  | _        | FB_CLK | MHz  |       |  |

# 6.5 Security and integrity modules

There are no specifications necessary for the device's security and integrity modules.

## 6.6 Analog

### 6.6.1 ADC electrical specifications

The 16-bit accuracy specifications listed in Table 27 and Table 28 are achievable on the differential pins ADCx\_DP0, ADCx\_DM0, ADCx\_DP1, ADCx\_DM1, ADCx\_DP3, and ADCx\_DM3.

The ADCx\_DP2 and ADCx\_DM2 ADC inputs are connected to the PGA outputs and are not direct device pins. Accuracy specifications for these pins are defined in Table 29 and Table 30.

All other ADC channels meet the 13-bit differential/12-bit single-ended accuracy specifications.

Table 27. 16-bit ADC operating conditions (continued)

| Symbol            | Description         | Conditions   | Min.   | Typ. <sup>1</sup> | Max.    | Unit | Notes |
|-------------------|---------------------|--|--------|-------------------|---------|------|-------|
| C <sub>rate</sub> | ADC conversion rate | 16-bit mode  No ADC hardware averaging  Continuous conversions enabled, subsequent | 37.037 | _                 | 461.467 | Ksps | 5     |
|                   |                     | conversion time  |        |                   |         |      |       |

- 1. Typical values assume  $V_{DDA} = 3.0 \text{ V}$ , Temp = 25 °C,  $f_{ADCK} = 1.0 \text{ MHz}$ , unless otherwise stated. Typical values are for reference only, and are not tested in production.
- 2. DC potential difference.
- 3. This resistance is external to MCU. To achieve the best results, the analog source resistance must be kept as low as possible. The results in this data sheet were derived from a system that had < 8 Ω analog source resistance. The R<sub>AS</sub>/C<sub>AS</sub> time constant should be kept to < 1 ns.</p>
- 4. To use the maximum ADC conversion clock frequency, the ADHSC bit must be set and the ADLPC bit must be clear.
- 5. For guidelines and examples of conversion rate calculation, download the ADC calculator tool.

| V <sub>TEMP25</sub> | Temp sensor voltage    | 25 °C   | 706  | 716                    | 726  | mV    |  |

- 1. All accuracy numbers assume the ADC is calibrated with  $V_{REFH} = V_{DDA}$
- Typical values assume V<sub>DDA</sub> = 3.0 V, Temp = 25°C, f<sub>ADCK</sub> = 2.0 MHz unless otherwise stated. Typical values are for reference only and are not tested in production.
- The ADC supply current depends on the ADC conversion clock speed, conversion rate and the ADLPC bit (low power).For lowest power operation the ADLPC bit must be set, the HSC bit must be clear with 1 MHz ADC conversion clock speed.
- 4.  $1 LSB = (V_{REFH} V_{REFL})/2^{N}$
- 5. ADC conversion clock < 16 MHz, Max hardware averaging (AVGE = %1, AVGS = %11)
- 6. Input data is 100 Hz sine wave. ADC conversion clock < 12 MHz.
- 7. Input data is 1 kHz sine wave. ADC conversion clock < 12 MHz.

- 1. Typical values assume V<sub>DDA</sub> = 3.0 V, Temp = 25°C, f<sub>ADCK</sub> = 6 MHz unless otherwise stated. Typical values are for reference only and are not tested in production.
- 2. ADC must be configured to use the internal voltage reference (VREF\_OUT)
- 3. PGA reference is internally connected to the VREF\_OUT pin. If the user wishes to drive VREF\_OUT with a voltage other than the output of the VREF module, the VREF module must be disabled.
- 4. For single ended configurations the input impedance of the driven input is  $R_{PGAD}/2$
- 5. The analog source resistance (R<sub>AS</sub>), external to MCU, should be kept as minimum as possible. Increased R<sub>AS</sub> causes drop in PGA gain without affecting other performances. This is not dependent on ADC clock frequency.
- 6. The minimum sampling time is dependent on input signal frequency and ADC mode of operation. A minimum of 1.25µs time should be allowed for F<sub>in</sub>=4 kHz at 16-bit differential mode. Recommended ADC setting is: ADLSMP=1, ADLSTS=2 at 8 MHz ADC clock.
- 7. ADC clock = 18 MHz, ADLSMP = 1, ADLST = 00, ADHSC = 1
- 8. ADC clock = 12 MHz, ADLSMP = 1, ADLST = 01, ADHSC = 1

- 1. Typical values assume  $V_{DDA}$  =3.0V, Temp=25°C,  $f_{ADCK}$ =6MHz unless otherwise stated.
- 2. This current is a PGA module adder, in addition to ADC conversion currents.
- 3. Between IN+ and IN-. The PGA draws a DC current from the input terminals. The magnitude of the DC current is a strong function of input common mode voltage (V<sub>CM</sub>) and the PGA gain.
- 4. Gain =  $2^{PGAG}$
- 5. After changing the PGA gain setting, a minimum of 2 ADC+PGA conversions should be ignored.
- 6. Limit the input signal swing so that the PGA does not saturate during operation. Input signal swing is dependent on the PGA reference voltage and gain setting.

# 6.6.2 CMP and 6-bit DAC electrical specifications

Table 31. Comparator and 6-bit DAC electrical specifications

- 1. Typical hysteresis is measured with input voltage range limited to 0.6 to  $V_{DD}$ -0.6 V.
- 2. Comparator initialization delay is defined as the time between software writes to change control inputs (Writes to DACEN, VRSEL, PSEL, MSEL, VOSEL) and the comparator output settling to a stable level.
- 3. 1 LSB = V<sub>reference</sub>/64

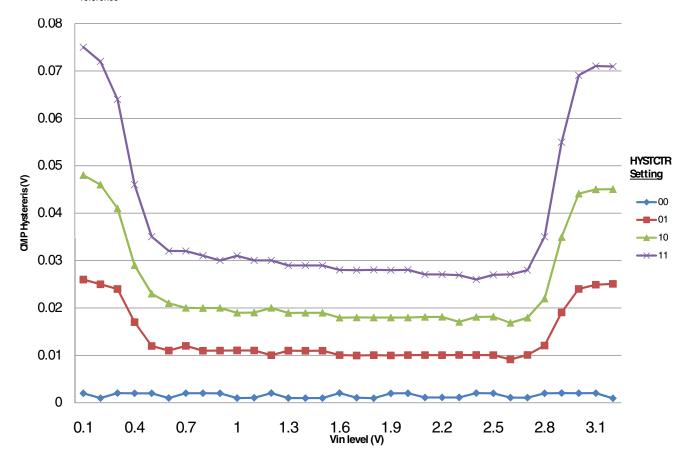

Figure 15. Typical hysteresis vs. Vin level (VDD=3.3V, PMODE=0)

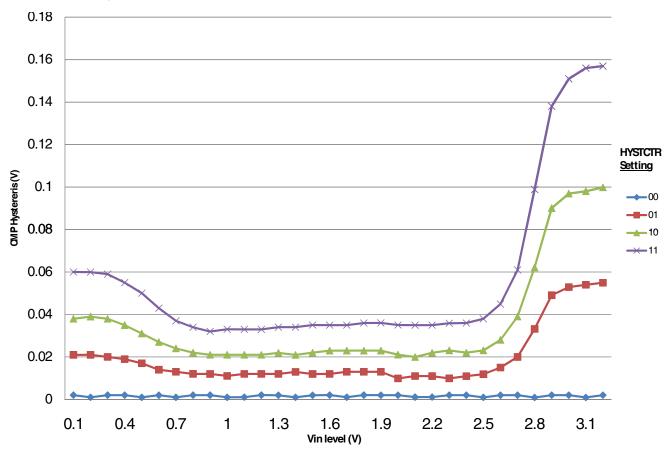

Figure 16. Typical hysteresis vs. Vin level (VDD=3.3V, PMODE=1)

## 6.6.3 12-bit DAC electrical characteristics

# 6.6.3.1 12-bit DAC operating requirements Table 32. 12-bit DAC operating requirements

| Symbol            | Desciption              | Min.     | Max.                    | Unit | Notes |
|-------------------|-------------------------|----------|-------------------------|------|-------|
| $V_{DDA}$         | Supply voltage          | 1.71 3.6 |                         | V    |       |
| V <sub>DACR</sub> | Reference voltage       | 1.13     | 3.6                     | V    | 1     |
| T <sub>A</sub>    | Temperature             |          | emperature<br>he device | °C   |       |
| C <sub>L</sub>    | Output load capacitance | _        | 100                     | pF   | 2     |
| IL                | Output load current     | _        | 1                       | mA   |       |

- 1. The DAC reference can be selected to be V<sub>DDA</sub> or the voltage output of the VREF module (VREF\_OUT)
- 2. A small load capacitance (47 pF) can improve the bandwidth performance of the DAC

## 6.8 Communication interfaces

# 6.8.1 CAN switching specifications

See General switching specifications.

## 6.8.2 DSPI switching specifications (limited voltage range)

The DMA Serial Peripheral Interface (DSPI) provides a synchronous serial bus with master and slave operations. Many of the transfer attributes are programmable. The tables below provide DSPI timing characteristics for classic SPI timing modes. Refer to the DSPI chapter of the Reference Manual for information on the modified transfer formats used for communicating with slower peripheral devices.

| Num | Description                         | Min.                      | Max.              | Unit | Notes |

| Set-up time for STOP condition   | t <sub>SU</sub> ; STO | 4                | _                 | 0.6                                | _       | μs   |
| Bus free time between STOP and START condition   | t <sub>BUF</sub>      | 4.7              | _                 | 1.3                                | _       | μs   |
| Pulse width of spikes that must be suppressed by the input filter                            | t <sub>SP</sub>       | N/A              | N/A               | 0                                  | 50      | ns   |

- The master mode I<sup>2</sup>C deasserts ACK of an address byte simultaneously with the falling edge of SCL. If no slaves
  acknowledge this address byte, then a negative hold time can result, depending on the edge rates of the SDA and SCL
  lines.
- 2. The maximum tHD; DAT must be met only if the device does not stretch the LOW period (tLOW) of the SCL signal.
- 3. Input signal Slew = 10ns and Output Load = 50pf
- 4. Set-up time in slave-transmitter mode is 1 IPBus clock period, if the TX FIFO is empty.
- 5. A Fast mode  $I^2C$  bus device can be used in a Standard mode  $I^2C$  bus system, but the requirement  $t_{SU; DAT} \ge 250$  ns must then be met. This is automatically the case if the device does not stretch the LOW period of the SCL signal. If such a device does stretch the LOW period of the SCL signal, then it must output the next data bit to the SDA line  $t_{rmax} + t_{SU; DAT} = 1000 + 250 = 1250$  ns (according to the Standard mode  $I^2C$  bus specification) before the SCL line is released.

K10 Sub-Family Data Sheet Data Sheet, Rev. 7, 02/2013.

6.  $C_b = total$  capacitance of the one bus line in pF.

Table 43. SDHC switching specifications

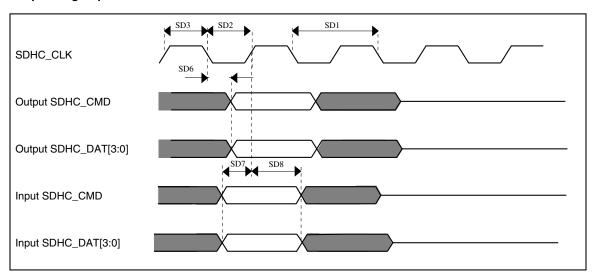

Figure 24. SDHC timing

## 6.8.7 I<sup>2</sup>S switching specifications

This section provides the AC timings for the I<sup>2</sup>S in master (clocks driven) and slave modes (clocks input). All timings are given for non-inverted serial clock polarity (TCR[TSCKP] = 0, RCR[RSCKP] = 0) and a non-inverted frame sync (TCR[TFSI] = 0, RCR[RFSI] = 0). If the polarity of the clock and/or the frame sync have been inverted, all the timings remain valid by inverting the clock signal (I2S\_BCLK) and/or the frame sync (I2S\_FS) shown in the figures below.

Table 44. I<sup>2</sup>S master mode timing (limited voltage range)

| Num | Description                                | Min.                 | Max. | Unit        |

## 6.9.1 TSI electrical specifications

Table 48. TSI electrical specifications

| Symbol               | Description   | Min.  | Тур.   | Max.  | Unit     | Notes |
|----------------------|---|-------|--------|-------|----------|-------|
| V <sub>DDTSI</sub>   | Operating voltage   | 1.71  | _      | 3.6   | V        |       |
| C <sub>ELE</sub>     | Target electrode capacitance range  | 1     | 20     | 500   | pF       | 1     |
| f <sub>REFmax</sub>  | Reference oscillator frequency  | _     | 5.5    | 12.7  | MHz      | 2     |
| f <sub>ELEmax</sub>  | Electrode oscillator frequency  | _     | 0.5    | 4.0   | MHz      | 3     |
| C <sub>REF</sub>     | Internal reference capacitor  | 0.5   | 1      | 1.2   | pF       |       |
| V <sub>DELTA</sub>   | Oscillator delta voltage  | 100   | 600    | 760   | mV       | 4     |
| I <sub>REF</sub>     | Reference oscillator current source base current  • 1uA setting (REFCHRG=0) | _     | 1.133  | 1.5   | μΑ       | 3,5   |
|                      | 32uA setting (REFCHRG=31)   | _     | 36     | 50    |          |       |
| I <sub>ELE</sub>     | Electrode oscillator current source base current  • 1uA setting (EXTCHRG=0) | _     | 1.133  | 1.5   | μΑ       | 3,6   |
|                      | 32uA setting (EXTCHRG=31)   | _     | 36     | 50    |          |       |
| Pres5                | Electrode capacitance measurement precision                                 | _     | 8.3333 | 38400 | fF/count | 7     |
| Pres20               | Electrode capacitance measurement precision                                 | _     | 8.3333 | 38400 | fF/count | 8     |
| Pres100              | Electrode capacitance measurement precision                                 | _     | 8.3333 | 38400 | fF/count | 9     |
| MaxSens              | Maximum sensitivity   | 0.003 | 12.5   | _     | fF/count | 10    |
| Res                  | Resolution  | _     | _      | 16    | bits     |       |
| T <sub>Con20</sub>   | Response time @ 20 pF   | 8     | 15     | 25    | μs       | 11    |
| I <sub>TSI_RUN</sub> | Current added in run mode   | _     | 55     | _     | μΑ       |       |
| I <sub>TSI_LP</sub>  | Low power mode current adder  | _     | 1.3    | 2.5   | μΑ       | 12    |

- 1. The TSI module is functional with capacitance values outside this range. However, optimal performance is not guaranteed.
- 2. CAPTRM=7, DELVOL=7, and fixed external capacitance of 20 pF.
- 3. CAPTRM=0, DELVOL=2, and fixed external capacitance of 20 pF.
- 4. CAPTRM=0, EXTCHRG=9, and fixed external capacitance of 20 pF.
- 5. The programmable current source value is generated by multiplying the SCANC[REFCHRG] value and the base current.
- 6. The programmable current source value is generated by multiplying the SCANC[EXTCHRG] value and the base current.
- 7. Measured with a 5 pF electrode, reference oscillator frequency of 10 MHz, PS = 128, NSCN = 8; lext = 16.
- 8. Measured with a 20 pF electrode, reference oscillator frequency of 10 MHz, PS = 128, NSCN = 2; lext = 16.
- 9. Measured with a 20 pF electrode, reference oscillator frequency of 10 MHz, PS = 16, NSCN = 3; lext = 16.
- 10. Sensitivity defines the minimum capacitance change when a single count from the TSI module changes, it is equal to  $(C_{ref} * I_{ext})/(I_{ref} * PS * NSCN)$ . Sensitivity depends on the configuration used. The typical value listed is based on the following configuration: lext = 5  $\mu$ A, EXTCHRG = 4, PS = 128, NSCN = 2,  $I_{ref} = 16 \mu$ A, REFCHRG = 15,  $C_{ref} = 1.0 \mu$ PF. The minimum sensitivity describes the smallest possible capacitance that can be measured by a single count (this is the best sensitivity but is described as a minimum because it's the smallest number). The minimum sensitivity parameter is based on the following configuration:  $I_{ext} = 1 \mu$ A, EXTCHRG = 0, PS = 128, NSCN = 32,  $I_{ref} = 32 \mu$ A, REFCHRG = 31,  $C_{ref} = 0.5 \mu$ F
- 11. Time to do one complete measurement of the electrode. Sensitivity resolution of 0.0133 pF, PS = 0, NSCN = 0, 1 electrode, DELVOL = 2, EXTCHRG = 15.
- 12. CAPTRM=7, DELVOL=2, REFCHRG=0, EXTCHRG=4, PS=7, NSCN=0F, LPSCNITV=F, LPO is selected (1 kHz), and fixed external capacitance of 20 pF. Data is captured with an average of 7 periods window.

K10 Sub-Family Data Sheet Data Sheet, Rev. 7, 02/2013.

## 7 Dimensions

## 7.1 Obtaining package dimensions

Package dimensions are provided in package drawings.

To find a package drawing, go to freescale.com and perform a keyword search for the drawing's document number:

| If you want the drawing for this package | Then use this document number |
|--|-------------------------------|
| 100-pin LQFP                             | 98ASS23308W                   |

## 8 Pinout

# 8.1 K10 Signal Multiplexing and Pin Assignments

The following table shows the signals available on each pin and the locations of these pins on the devices supported by this document. The Port Control Module is responsible for selecting which ALT functionality is available on each pin.

| 100<br>LQFP | Pin Name         | Default   | ALT0      | ALT1             | ALT2      | ALT3        | ALT4       | ALT5 | ALT6       | ALT7 | EzPort |
|-------------|------------------|-----------|-----------|------------------|-----------|-------------|------------|------|------------|------|--------|
| 1           | PTE0             | ADC1_SE4a | ADC1_SE4a | PTE0             | SPI1_PCS1 | UART1_TX    | SDHC0_D1   |      | I2C1_SDA   |      |        |

## 8.2 K10 Pinouts

The below figure shows the pinout diagram for the devices supported by this document. Many signals may be multiplexed onto a single pin. To determine what signals can be used on which pin, see the previous section.

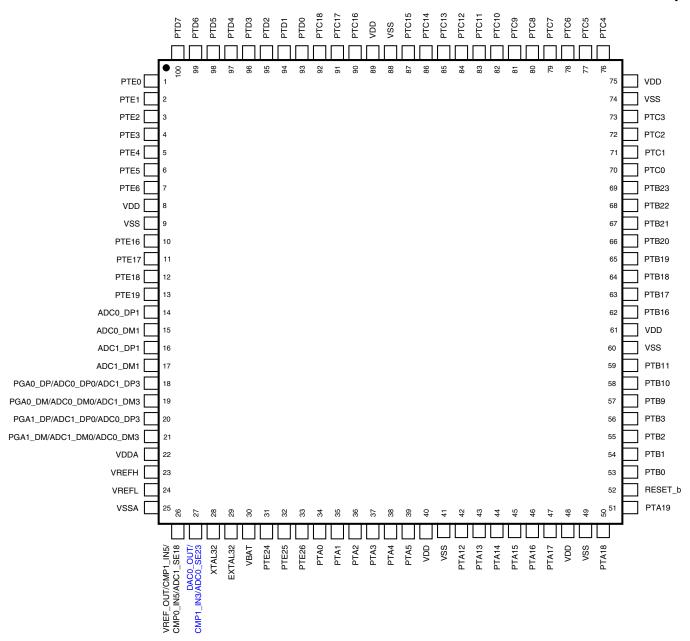

Figure 27. K10 100 LQFP Pinout Diagram

# 9 Revision History

The following table provides a revision history for this document.

**Table 49. Revision History** 

| Rev. No. | Date    | Substantial Changes     |
|----------|---------|-------------------------|
| 1        | 11/2010 | Initial public revision |
| 2        | 3/2011  | Many updates throughout |

Table continues on the next page...

K10 Sub-Family Data Sheet Data Sheet, Rev. 7, 02/2013.

Freescale Semiconductor, Inc. 65

#### nevision History

## Table 49. Revision History (continued)

| Rev. No. | Date    | Substantial Changes   |
|----------|---------|---|
| 3        | 3/2011  | Added sections that were inadvertently removed in previous revision   |
| 4        | 3/2011  | Reworded I <sub>IC</sub> footnote in "Voltage and Current Operating Requirements" table.  |
|          |         | Added paragraph to "Peripheral operating requirements and behaviors" section.   |
|          |         | Added "JTAG full voltage range electricals" table to the "JTAG electricals" section.  |
| 5        | 6/2011  | Changed supported part numbers per new part number scheme Changed DC injection current specs in "Voltage and current operating requirements" table Changed Input leakage current and internal pullup/pulldown resistor specs in "Voltage and current operating behaviors" table Split Low power stop mode current specs by temperature range in "Power consumption operating behaviors" table Changed typical IDD_VBAT spec in "Power consumption operating behaviors" table Added LPTMR clock specs to "Device clock specifications" table Changed Minimum external reset pulse width in "General switching specifications" table Changed Minimum external reset pulse width in "General switching specifications" table Changed PLL operating current in "MCG specifications" table Changed Supply current in "Oscillator DC electrical specifications" table Changed Orystal startup time in "Oscillator requency specifications" table Changed Operating voltage in "EzPort switching specifications" table Changed Operating voltage in "EzPort switching specifications" table Changed title of "FlexBus switching specifications" table and added Output valid and hold specs Added "FlexBus full range switching specifications" table Changed ADC asynchronous clock source specs in "16-bit ADC characteristics" table Changed Aprice in "16-bit ADC with PGA characteristics" table Changed Input DC current to "16-bit ADC with PGA characteristics" table Changed Input Offset voltage and ENOB notes field in "16-bit ADC with PGA characteristics" table Changed Analog comparator initialization delay in "Comparator and 6-bit DAC electrical specifications" Changed Cobe-to-code settling time, DAC output voltage range low, and Temperature coefficient offset voltage in "12-bit DAC operating behaviors" table Changed DSPI_SCK cycle time specs in "DSPI timing" tables Changed DSPI_SCK to DSPI_SOUT valid spec in "Slave mode DSPI timing (high-speed mode)" table Changed Reference oscillator current source base current spec and added Low-power current adder footer in "TSI electrical specif |
| 6        | 01/2012 | <ul> <li>Added AC electrical specifications.</li> <li>Replaced TBDs with silicon data throughout.</li> <li>In "Power mode transition operating behaviors" table, removed entry times.</li> <li>Updated "EMC radiated emissions operating behaviors" to remove SAE level and also added data for 144LQFP.</li> <li>Clarified "EP7" in "EzPort switching specifications" table and "EzPort Timing Diagram".</li> <li>Added "ENOB vs. ADC_CLK for 16-bit differential and 16-bit single-ended modes" figures.</li> <li>Updated I<sub>DD RUN</sub> numbers in 'Power consumption operating behaviors' section.</li> </ul>   |
|          |         | <ul> <li>Clarified 'Diagram: Typical IDD_RUN operating behavior' section and updated 'Run mode supply current vs. core frequency — all peripheral clocks disabled' figure.</li> <li>In 'Voltage reference electrical specifications' section, updated C<sub>L</sub>, V<sub>tdrift</sub>, and V<sub>vdrift</sub> values.</li> </ul>  |

## Table 49. Revision History (continued)

| Rev. No. | Date    | Substantial Changes  |
|----------|---------|--|
| 7        | 02/2013 | <ul> <li>In "ESD handling ratings", added a note for I<sub>LAT</sub>.</li> <li>Updated "Voltage and current operating requirements".</li> <li>Updated "Voltage and current operating behaviors".</li> <li>Updated "Power mode transition operating behaviors" to add MAPBGA data.</li> <li>In "MCG specifications", updated the description of f<sub>ints_t</sub>.</li> <li>In "16-bit ADC operating conditions", updated the max spec of V<sub>ADIN</sub>.</li> <li>In "16-bit ADC electrical characteristics", updated the temp sensor slope and voltage specs.</li> <li>Updated "I2C switching specifications".</li> <li>In "SDHC specifications", removed the operating voltage limits and updated the SD1 and SD6 specs.</li> <li>In "I2S switching specifications", added separate specification tables for the full operating voltage range.</li> </ul> |

#### How to Reach Us:

#### **Home Page:**

www.freescale.com

#### Web Support:

http://www.freescale.com/support

#### **USA/Europe or Locations Not Listed:**

Freescale Semiconductor
Technical Information Center, EL516
2100 East Elliot Road
Tempe, Arizona 85284
+1-800-521-6274 or +1-480-768-2130
www.freescale.com/support

#### Europe, Middle East, and Africa:

Freescale Halbleiter Deutschland GmbH
Technical Information Center
Schatzbogen 7
81829 Muenchen, Germany
