# 74LVX273 Low Voltage Octal D-Type Flip-Flop

# interface of 5V systems to 3V systems.

FAIRCHILD

SEMICONDUCTOR

**General Description** 

(clear) all flip-flops simultaneously.

Low Voltage Octal D-Type Flip-Flop

The LVX273 has eight edge-triggered D-type flip-flops with

individual D inputs and Q outputs. The common buffered

Clock (CP) and Master Reset (MR) input load and reset

The register is fully edge-triggered. The state of each D input, one setup time before the LOW-to-HIGH clock transition, is transferred to the corresponding flip-flop's Q output. All outputs will be forced LOW independently of Clock or Data inputs by a LOW voltage level on the MR input. The device is useful for applications where the true output only is required and the Clock and Master Reset are common to all storage elements. The inputs tolerate up to 7V allowing

74LVX273

| Ordering | Code: |

| Order Number           | Package Number           | Package Description   |
|------------------------|--------------------------|---|
| 74LVX273M              | M20B                     | 20-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-013, 0.300" Wide  |
| 74LVX273SJ             | M20D                     | Pb-Free 20-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide       |
| 74LVX273MTC            | MTC20                    | 20-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 4.4mm Wide |
| Devices also available | in Tane and Reel Specify | by appending letter suffix "X" to the ordering code                         |

**Features** 

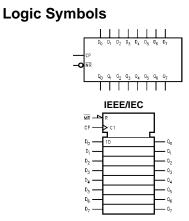

■ Input voltage translation from 5V to 3V

dynamic threshold performance

■ Ideal for low power/low noise 3.3V applications

■ Guaranteed simultaneous switching noise level and

Pb-Free package per JEDEC J-STD-020B.

| (I <sub>CC</sub> or I <sub>GND</sub> )   | ±75 mA                          |
| Storage Temperature (T <sub>STG</sub> )  | –65°C to +150°C                 |
| Power Dissipation  | 180 mW                          |
|  |                                 |

### Recommended Operating Conditions (Note 2)

| Supply Voltage (V <sub>CC</sub> )                  | 2.0V to 3.6V          |
|--|-----------------------|
| Input Voltage (V <sub>I</sub> )                    | 0V to 5.5V            |
| Output Voltage (V <sub>O</sub> )                   | 0V to V <sub>CC</sub> |
| Operating Temperature (T <sub>A</sub> )            | -40°C to +85°C        |
| Input Rise and Fall Time ( $\Delta t / \Delta V$ ) | 0 ns/V to 100 ns/V    |

74LVX273

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 2: Unused inputs must be held HIGH or LOW. They may not float.

Note 4: Parameter guaranteed by design.  $t_{OSLH} = |t_{PLHm} - t_{PLHn}|, t_{OSHL} = |t_{PHLm} - t_{PHLn}|$ 

### Capacitance

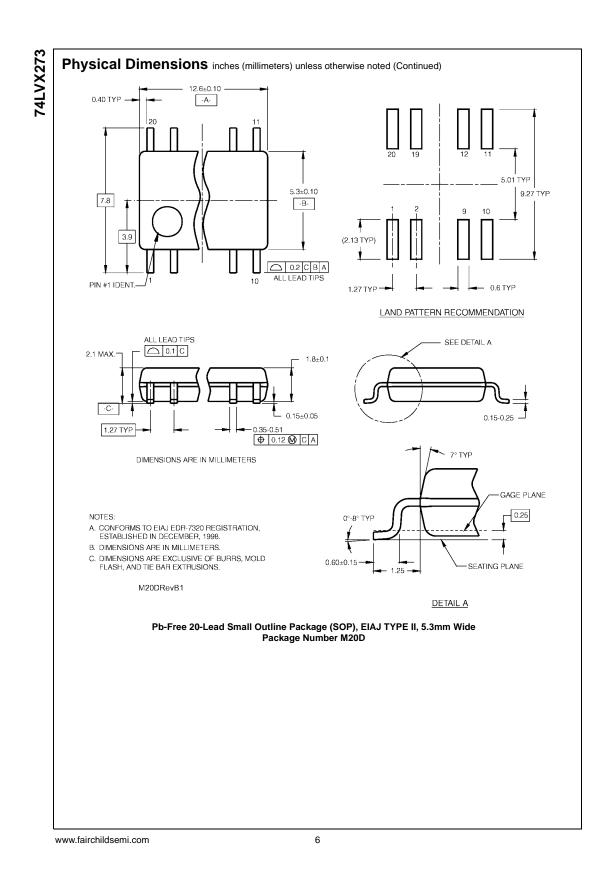

| Symbol           | Parameter            |     | $T_A = +25^{\circ}C$ |     | $T_A = -40^{\circ}$ | Units |       |
|------------------|----------------------|-----|----------------------|-----|---------------------|-------|-------|
|                  | Falanielei           | Min | Тур                  | Max | Min                 | Max   | Units |
| CIN              | Input Capacitance    |     | 4                    | 10  |                     | 10    | pF    |
| C <sub>OUT</sub> | Output Capacitance   |     | 6                    |     |                     |       | pF    |
| C <sub>PD</sub>  | Power Dissipation    |     | 31                   |     |                     |       | pF    |
|                  | Capacitance (Note 5) |     |                      |     |                     |       |       |

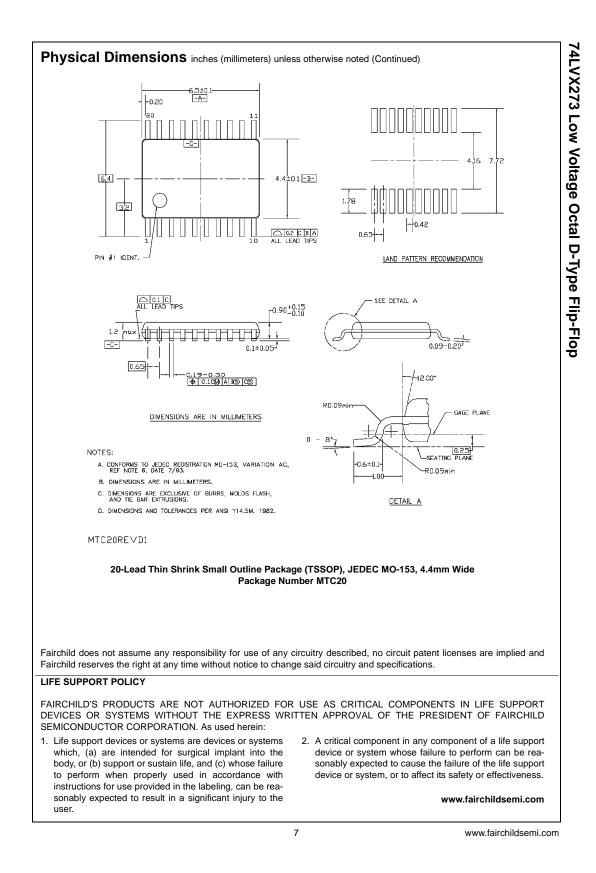

Note 5: CPD is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption without load.

Average operating current can be obtained by the equation:  $I_{CC(opr.)} = \frac{C_{PD} \times V_{CC} \times f_{|N} + I_{CC}}{8 \text{ (per F/F)}}$
