

LT3462/LT3462A

ABSOLUTE MAXIMUM RATINGS

(Note 1)

Input Voltage (V_{IN}) 16V
SW Voltage 40V
D Voltage -40V
SDREF, FB Voltage 2.5V
Operating Ambient
Temperature Range (Note 3) -40°C to 85°C

Maximum Junction Temperature 125°C
Storage Temperature Range -65°C to 150°C
Lead Temperature (Soldering, 10sec)
(TSOT-23 Package Only) 300°C

PIN CONFIGURATION

Consult ADI Marketing for parts specified with wider operating temperature ranges.

For more information on lead free part marking, go to: <http://www.linear.com/leadfree/>

For more information on tape and reel specifications, go to: <http://www.linear.com/tapeandreel/>. Some packages are available in 500 unit reels through designated sales channels with #TRMPBF suffix.

ELECTRICAL CHARACTERISTICS

The ● denotes the specifications which apply over the full operating temperature range, otherwise specifications are at $T_A = 25^\circ\text{C}$, $V_{IN} = 3\text{V}$, unless otherwise noted.

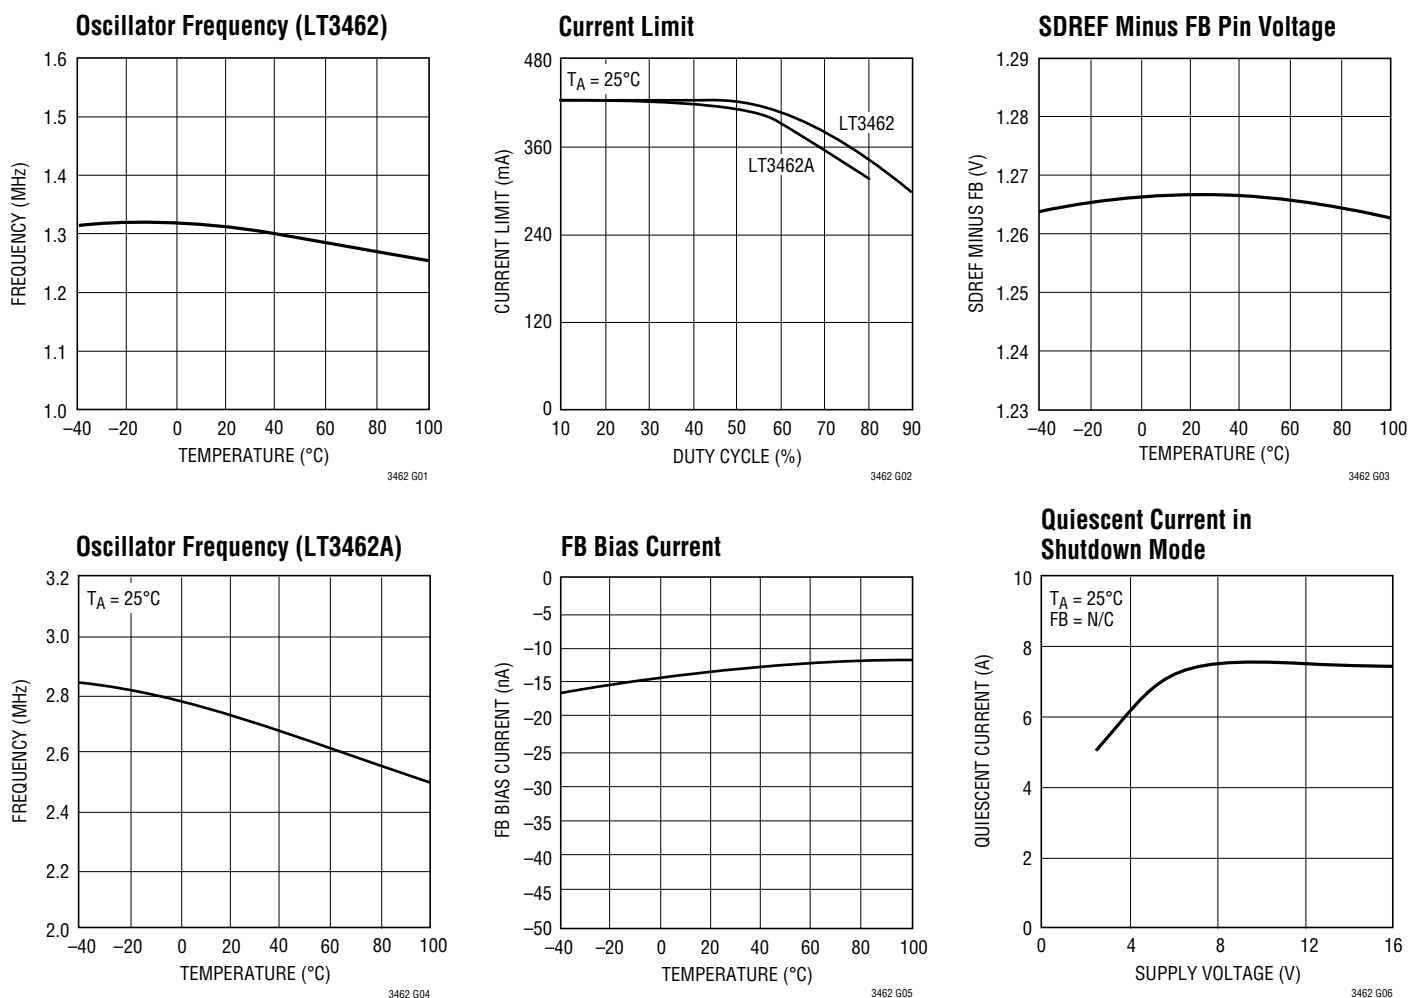

PARAMETER	CONDITIONS		MIN	TYP	MAX	UNITS
Minimum Operating Voltage			2.5			V
Maximum Operating Voltage					16	V
SDREF Voltage	$10\mu\text{A} > I_{SDREF} \geq -80\mu\text{A}$	●	1.245	1.265	1.285	V
FB Pin Bias Current (Note 2)				15	50	nA
SDREF Minus FB Voltage	$10\mu\text{A} > I_{SDREF} \geq -80\mu\text{A}$	●	1.235	1.263	1.285	V
Error Amp Offset Voltage			-12		12	mV
SDREF Reference Source Current	$SDREF > 1.2\text{V}$	●	120	180		μA
Supply Current	$FB = -0.05\text{V}$, Not Switching $SDREF = 0\text{V}$, $FB = \text{Open}$, $V_{IN} = 5\text{V}$			2.9 6.5	3.6 10	mA μA
SDREF Line Regulation				0.007		%/V
Switching Frequency (LT3462)		●	0.8	1.2	1.6	MHz
Switching Frequency (LT3462A)		●	2.0	2.7	3.5	MHz
Maximum Duty Cycle (LT3462)		●	90			%
Maximum Duty Cycle (LT3462A)		●	77			%
Switch Current Limit			300	420		mA
Switch V_{CESAT}	$I_{SW} = 250\text{mA}$			270	350	mV
Switch Leakage Current	$V_{SW} = 5\text{V}$			0.01	1	μA
Rectifier Leakage Current	$V_D = -40\text{V}$			0.03	4	μA
Rectifier Forward Drop	$I_{SCHOTTKY} = 250\text{mA}$			800	1100	mV
SDREF Voltage Low		●			0.20	V
SDREF Off-State Pull-Up Current			1	2	3	μA
SDREF Turn-Off Current			-300	-200		μA

Note 1: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

Note 2: Current flows out of the pin.

Note 3: The LT3462E is guaranteed to meet specifications from 0°C to 70°C . Specifications over the -40°C to 85°C operating temperature range are assured by design, characterization and correlation with statistical process controls.

TYPICAL PERFORMANCE CHARACTERISTICS

PIN FUNCTIONS (TSOT-23/DFN)

SW (Pin 1/Pin 4): Switch Pin. Connect to external inductor L1 and positive terminal of transfer cap.

GND (Pin 2/Pins 2, 3): Ground. Tie directly to local ground plane.

FB (Pin 3/Pin 1): Feedback Pin. Connect resistive divider tap here. Set R1 according to $R1 = R2 \cdot (V_{OUT}/1.265V)$. In shutdown, a proprietary shutdown bias current cancellation circuit allows the internal 3μA source to pull up the SDREF pin, even with residual negative voltage on V_{OUT} .

SDREF (Pin 4/Pin 8): Dual Function Shutdown and 1.265V Reference Output Pin. Pull to GND with external N-FET to turn regulator off. Turn-off pull-down and a 2μA internal source will pull SDREF up to turn-on the

regulator. At turn-on, a 180μA internal source pulls the pin to the regulation voltage. The SDREF pin can supply up to 80μA at 1.265V to bias the feedback resistor divider. An optional soft-start circuit capacitor connects from this pin to $-V_{OUT}$.

D (Pin 5/Pin 7): Anode Terminal of Integrated Schottky Diode. Connect to negative terminal of transfer cap and external inductor L2.

V_{IN} (Pin 6/Pin 5): Input Supply Pin. Must be locally bypassed.

Exposed Pad (NA/Pin 9): GND. The exposed pad should be soldered to the PCB ground to achieve the rated thermal performance.

APPLICATIONS INFORMATION

Inrush Current

The LT3462 has a built-in Schottky diode. When supply voltage is applied to the V_{IN} pin, the voltage difference between V_{IN} and V_D generates inrush current flowing from input through the inductor and the Schottky diode to charge the flying capacitor to V_{IN} . The maximum non-repetitive surge current the Schottky diode in the LT3462 can sustain is 1.5A. The selection of inductor and capacitor value should ensure the peak of the inrush current to be below 1.5A. The peak inrush current can be calculated as follows:

$$I_P = \frac{V_{IN} - 0.6}{\sqrt{\frac{L}{C}} - 1} \exp\left(-\frac{\pi}{2\sqrt{\frac{L}{C}} - 1}\right)$$

where L is the inductance between supply and SW, and C is the capacitance between SW and D.

Table 3 gives inrush peak currents for some component selections.

Table 3. Inrush Peak Current

V_{IN} (V)	L (μ H)	C (μ F)	I_P (A)
5	22	1	0.70
5	33	1	0.60
12	47	1	1.40

Inductor Selection

Each of the two inductors used with LT3462 should have a saturation current rating (where inductance is approximately 70% of zero current inductance) of approximately 0.25A or greater. If the device is used in the charge pump mode, where there is only one inductor, then its rating should be 0.35A or greater. DCR of the inductors should be less than 1 Ω . For LT3462, a value of 22 μ H is suitable if using a coupled inductor such as Sumida CLS62-220. If using two separate inductors, increasing the value to 47 μ H will result in the same ripple current. For LT3462A, a value of 10 μ H for the coupled inductor and 22 μ H for two inductors will be acceptable for most applications.

Capacitor Selection

Ceramic capacitors are recommended. An X7R or X5R dielectric should be used to avoid capacitance decreasing severely with applied voltage and at temperature limits. The “flying” capacitor between the SW and D pins should be a ceramic type of value 1 μ F or more. When used in the dual inductor or coupled inductor topologies the flying capacitor should have a voltage rating that is more than the difference between the input and output voltages. For the charge pump inverter topology, the voltage rating should be more than the output voltage. The output capacitor should be a ceramic type. Acceptable output capacitance varies from 1 μ F for high V_{OUT} (–36V), to 10 μ F for low V_{OUT} (–5V). The input capacitor should be a 1 μ F ceramic type and be placed as close as possible to the LT3462/LT3462A.

Layout Hints

The high speed operation of the LT3462 demands careful attention to board layout. You will not get advertised performance with careless layout. Figure 2 shows the recommended component placement. A ceramic capacitor of 1 μ F or more must be placed close to the IC for input supply bypassing.

Figure 2. Suggested Layout

TYPICAL APPLICATIONS

3.3V to -12V with Soft-Start Circuit

-12V Efficiency

V_{OUT} Reaches -12V in 750µs; Input Current Peaks at 300mA without C_{S1}

V_{OUT} Reaches -12V in 7.5ms; Input Current Peaks at 125mA with C_{S1} = 100nF

Li⁺ to -8V Supply

PACKAGE DESCRIPTION

Please refer to <http://www.linear.com/product/LT3462#packaging> for the most recent package drawings.

S6 Package 6-Lead Plastic TSOT-23 (Reference LTC DWG # 05-08-1636)

- NOTE:
1. DIMENSIONS ARE IN MILLIMETERS
 2. DRAWING NOT TO SCALE
 3. DIMENSIONS ARE INCLUSIVE OF PLATING
 4. DIMENSIONS ARE EXCLUSIVE OF MOLD FLASH AND METAL BURR
 5. MOLD FLASH SHALL NOT EXCEED 0.254mm
 6. JEDEC PACKAGE REFERENCE IS MO-193

S6 TSOT-23 0302
