Part Number		Junction Temp. Range	Voltage	Current	Package
Standard	RoHS Compliant*				
MIC29510-3.3BT	MIC29510-3.3WT	0°C to +125°C	3.3V	5A	TO-220-3
MIC29510-5.0BT	MIC29510-5.0WT	0°C to +125°C	5.0V	5A	TO-220-3
MIC29512BT	MIC29512WT	0°C to +125°C	Adj.	5A	TO-220-5

* RoHS compliant with 'high-melting solder' exemption.

Pin Configuration

MIC29510BT/WT

MIC29512BT/WT

On all devices, the Tab is grounded

Pin Description

3-Pin TO-220 (MIC29510)

Pin Number	Pin Name	Pin Function
1	IN	Unregulated Input: +16V maximum supply.
2	GND	Ground: Internally connected to tab (ground).
3	OUT	Regulated Output.

5-Pin TO-220 (MIC29512)

Pin Number	Pin Name	Pin Function
1	EN	Enable (Input): Logic-level ON/OFF control.
2	IN	Unregulated Input: +16V maximum supply.
3	GND	Ground: Internally connected to tab (ground).
4	OUT	Regulated Output.
5	ADJ	Output Voltage Adjust: 1.240V feedback from external resistive divider.

Absolute Maximum Ratings

Input Supply Voltage⁽¹⁾ –20V to +20V
 Power Dissipation Internally Limited
 Storage Temperature Range –65°C to +150°C
 Ambient Temperature Range (soldering, 5 sec.) 260°C

Operating Ratings

Operating Junction Temperature 0°C to +125°C
 (θ_{JC}) (TO-220) 2°C/W
 (θ_{JA}) (TO-220) 55°C/W

Electrical Characteristics

All measurements at $T_J = 25^\circ\text{C}$ unless otherwise noted. **Bold** values are guaranteed across the operating temperature range.

Regulator Output Current in Shutdown	(Note 8)		10	20	μA μA

Notes:

General Note: Devices are ESD sensitive. Handling precautions are recommended.

- 1. The maximum continuous supply voltage is 16V.
- 2. Full Load current is defined as 5A for the MIC29510/29512. For testing, V_{OUT} is programmed to 5V.
- 3. Dropout voltage defined as the input-to-output differential when the output voltage drops to 99% of its nominal value with $V_{OUT} + 1V$ applied to V_{IN} .
- 4. For this test, V_{IN} is the larger of 8V or $V_{OUT} + 3V$.
- 5. Ground pin current is regulator quiescent current. Total current drawn from the source is the sum of the load current plus the ground pin current.
- 6. Output voltage temperature coefficient is defined as the worst case voltage change divided by the total temperature range.
- 7. $V_{REF} \leq V_{OUT} \leq (V_{IN} - 1V)$, $2.4V \leq V_{IN} \leq 16V$, $10mA < I_L \leq I_{FL}$, $T_J \leq T_{JMAX}$.
- 8. $V_{EN} \leq 0.8V$ and $V_{IN} \leq 8V$, $V_{OUT} = 0$.

Applications Information

The MIC29510 and MIC29512 are high performance low-dropout voltage regulators suitable for all moderate to high-current voltage regulator applications. Their 600mV of dropout voltage at full load make them especially valuable in battery powered systems and as high efficiency noise filters in “post-regulator” applications. Unlike older NPN-pass transistor designs, where the minimum dropout voltage is limited by the base-emitter voltage drop and collector-emitter saturation voltage, dropout performance of the PNP output of these devices is limited merely by the low VCE saturation voltage.

A trade-off for the low dropout voltage is a varying base drive requirement. But Micrel's Super β PNP™ process reduces this drive requirement to merely 2 to 5% of the load current.

MIC29510/512 regulators are fully protected from damage due to fault conditions. Current limiting is provided. This limiting is linear; output current under overload conditions is constant. Thermal shutdown disables the device when the die temperature exceeds the maximum safe operating temperature.

Transient protection allows device (and load) survival even when the input voltage spike above and below nominal. The output structure of these regulators allows voltages in excess of the desired output voltage to be applied without reverse current flow. The MIC29512 version offers a logic level ON/OFF control: when disabled, the devices draw nearly zero current.

An additional feature of this regulator family is a common pinout: a design's current requirement may change up or down yet use the same board layout, as all of Micrel's high-current Super β PNP™ regulators have identical pinouts.

Figure 3. The MIC29510 requires only two capacitors for operation

Thermal Design

Linear regulators are simple to use. The most complicated design parameters to consider are thermal characteristics. Thermal design requires the following application-specific parameters:

- Maximum ambient temperature, T_A
- Output Current, I_{OUT}
- Output Voltage, V_{OUT}
- Input Voltage, V_{IN}

First, we calculate the power dissipation of the regulator from these numbers and the device parameters from this datasheet.

$$P_D = I_{OUT} \times (1.02V_{IN} - V_{OUT})$$

Where the ground current is approximated by 3% of I_{OUT} , then the heat sink thermal resistance is determined with this formula:

$$\theta_{SA} = \frac{T_{J(MAX)} - T_A}{P_D} - (\theta_{JC} + \theta_{CS})$$

Where $T_{J MAX} \leq 125^\circ\text{C}$ and θ_{CS} is between 0 and 2°C/W . The heat sink may be significantly reduced in applications where the minimum input voltage is known and is large compared with the dropout voltage. Use a series input resistor to drop excessive voltage and distribute the heat between this resistor and the regulator. The low dropout properties of Micrel Super β PNP regulators allow very significant reductions in regulator power dissipation and the associated heat sink without compromising performance. When this technique is employed, a capacitor of at least $0.1\mu\text{F}$ is needed directly between the input and regulator ground.

Please refer to Application Note 9 for further details and examples on thermal design and heat sink specification.

Capacitor Requirements

For stability and minimum output noise, a capacitor on the regulator output is necessary. The value of this capacitor is dependent upon the output current; lower currents allow smaller capacitors. MIC29510/2 regulators are stable with a minimum capacitor value of $47\mu\text{F}$ at full load.

This capacitor need not be an expensive low ESR type: aluminum electrolytics are adequate. In fact, extremely low ESR capacitors may contribute to instability. Tantalum capacitors are recommended for systems where fast load transient response is important.

Where the regulator is powered from a source with high AC impedance, a 0.1μF capacitor connected between Input and GND is recommended. This capacitor should have good characteristics to above 250kHz.

Transient Response and 5V to 3.3V Conversion

The MIC29510/2 have excellent response to variations in input voltage and load current. By virtue of their low dropout voltage, these devices do not saturate into dropout as readily as similar NPN-based designs. A 3.3V output Micrel LDO will maintain full speed and performance with an input supply as low as 4.2V, and will still provide some regulation with supplies down to 3.8V, unlike NPN devices that require 5.1V or more for good performance and become nothing more than a resistor under 4.6V of input. Micrel's PNP regulators provide superior performance in "5V to 3.3V" conversion applications, especially when all tolerances are considered.

Adjustable Regulator Design

The adjustable regulator version, MIC29512, allows programming the output voltage anywhere between 1.25V and the 16V maximum operating rating of the family. Two resistors are used. Resistors can be quite large, up to 100kΩ, because of the very high input impedance and low bias current of the sense comparator. The resistor values are calculated by:

$$R1 = R2 \times \left(\frac{V_{OUT}}{1.240} - 1 \right)$$

Where V_O is the desired output voltage. Figure 4 shows component definition.

Adjustable Regulator Design

Figure 4. Adjustable Regulator with Resistors

Enable Input

The MIC29512 version features an enable (EN) input that allows ON/OFF control of the device. Special design allows "zero" current drain when the device is disabled—only microamperes of leakage current flows. The EN input has TTL/CMOS compatible thresholds for simple interfacing with logic, or may be directly tied to V_{IN} . Enabling the regulator requires approximately 20μA of current into the EN pin.

Voltage	Standard (Ω)	
	R1	R2
2.85	100k	76.8k
2.9	100k	75.0k
3.0	100k	69.8k
3.1	100k	66.5k
3.15	100k	64.9k
3.3	100k	60.4k
3.45	100k	56.2k
3.525	93.1k	51.1k
3.6	100k	52.3k
3.8	100k	48.7k
4.0	100k	45.3k
4.1	100k	43.2k
