SIP Resistor Network Features/Applications

These high quality SIP resistor networks are designed using Murata's years of experience in thick film resistor technology. Their reliability is assured by a massproduction system that puts quality first.

■Features

1. Various Types

Murata's R-networks are designed to meet a wide variaty of resistor needs. Three types are available: standard low profile (approximately the same height as ICs, 5mm max.), middle profile, and high profile.

Series Name

Pin Pitch			
	2.54mm	1.78mm	Remarks
Height			
9.0mm max.	RGHD	_	Custom Series
6.5mm max.	RGSD	_	Custom Series
5.0mm max.	RGLD	RGLE	Standard Series

2. Standard Circuits

Murata offers the circuits shown below in the standard series; they are frequently used in digital circuits and equipment. Also, Murata produces various custom products to fully meet the customer's needs.

3. Compact Design

Compact design allows these resistors to be used in applications requiring high density insertion. An added feature of the 2.54mm pitch types enables insertion along rows and lines of holes with the same pitch.

4. Automatic Insertion

To meet demands to decrease assembly and labor costs, Murata offers two taping types. This allows the products to be automatically inserted in the same way as general radial taping parts. Please note that some automatic insertion machines are not supported.

Standard Circuits

Type Code	X Type	Ү Туре	М Туре	Z Type	L Type (RGSD)
Circuit	\$ \$ \frac{1}{2} \cdot \frac{1}		₩ ₩ ₩R1	₩₩₩R1	R R R R R R R R R R R R R R R R R R R

■Applications

Home Electronics

Color TVs, VCRs, audio equipment, home appliances containing microcomputers (air-conditioners, fan-heaters, washing machines, refrigerators, microwave ovens, etc.).

Industrial Equipment

Computer and peripheral devices, office supplies (printers, word-processors, plain paper copiers, electric typewriters, etc.) Communication equipment (telephones, digital exchanges, communication systems, etc.)

Programmable controllers, Measuring equipment, Car electronics and other types of equipment.

Standard Resistor Network RGLD Series

■Features

- 1. The popular RGLD series has standard low profile dimensions equivalent to those of an IC (height : 5.0mm max.; pitch : 2.54mm).
- 2. Available in tape packaging to meet assembly cost reduction demands.
- 3. Products of this series are used in standard digital circuits.

Shrink Pitch Resistor Network RGLE Series

2 ■Features

- 1. The RGLE series comprises standard low profile R-networks with dimensions equivalent to those of a shrink pin pitch IC (height: 5.0mm; pitch: 1.78mm).
- 2. Equivalent dimensions to shrink pin pitch IC facilitates PCB pattern design and enables high density insertion.

High-Power Isolated Resistor Network RGSD Series

■Features

- 1. Y type is isolated circuit type. And Y type is used as current limiting resistor, level translating resistor.
- 2. The RGSD series (height : 6.5mm max.; pitch : 2.54mm) is high-power resistor network.
- 3. Available in the tape packing to meet assembly cost reduction demands.
- 4. An added feature of the 2.54mm pitch types enables insertion along rows and lines of holes with the same pitch.

R/2R Ladder Resistor Network RGSD Series

■Features

- 1. These high performance R/2R ladder R-networks enabled by thick film technology have a maximum of 8 bits.
- 2. The linearity of RGSD series R/2R ladder R-networks is guaranteed. They have the performance of $\pm 1/2 LSB$.
- 3. This series has a compact design (height: 6.5mm) and is used in AD/DA converters in a variety of digital circuits and equipment.

Custom Resistor Network Series

■Features

- 1. The profiles of custom resistor network series products range from high profile (9.0mm) to low profile (5.0mm). All R-network needs can be accommodated.
- 2. High accuracy performance on resistance tolerance, temperature coefficient etc, is available with high technology and high grade materials.
- 3. Also, on the relative precision of the performance between resistor elements, the high accuracy is available.

Performance and Test Method

	Test Item	Performance	Test Method			
DC Resistance value		Within the specified Value	Based on JIS C 5202 5.1. Maximum applied voltage is shown in the table below.			
			Nominal Resistance Range(Ω) Max. Applied Voltage (V) <100			
Temperature Coefficient of Resistance		Within ±200ppm/℃	Based on JIS C 5202 5.2. Measure after maintaining for over 30 minutes at each stage shown in the table below, Calculation shall be made with the formula shown below. Stage Temp. °C Remarks 20 \pm 1 Standard temp. on low-temp. side 2 -55 \pm 3 3 20 \pm 1 Standard temp. on high-temp. side 4 125 \pm 3 R : Actual measured resistance value(Ω) at t °C Ro : Actual measured value of test temperature (°C) to : Actual measured value of standard temperature (°C) TCR(ppm/°C)= $\frac{R-R_0}{R_0} \times \frac{1}{t-t_0} \times 10^6$			
Short Time Overload		No noticeable abnormalities in appearance. ΔR: Within ±1.0%	$ \frac{1 \text{CR(ppm/C)} = \frac{1}{R_0} \times \frac{1}{t-t_0} \times 10^{\circ} }{\text{Apply 2.5 times the rated voltage for 5 seconds to each resistor in the network, one at a time.} $ $ \frac{1}{R_0} \times \frac{1}{t-t_0} \times 10^{\circ} $ $ \frac{1}{R_0} \times 10^{\circ} $ $ \frac{1}{R$			
Terminal Strength	Pull Test Bend Test	There shall be no broken or loose pins.	Fix the sample body and apply a load of 10N gradually to the pin in the axial direction. Maintain the force for 10 seconds. Bend the pin by 90° in the vertical direction and return to the previous position under applying a load of 5N. And repeat a similar operation in the opposite direction.			
Resistance to Soldering Heat		There shall be neither mechanical damage nor noticeable change in appearance. ΔR: Within ±0.5%	Immerse the pin in melted solder at 260±5℃ up to the level of the seating plane of pin for 10±1 second and raise. Then maintain at room temperature for over 1 hour and measure.			
Solderability		Over 95% of the immersed part of the pins is covered with new solder.	Immerse the pin in a flux comprising methanol and resin (weight ratio 25%) up to the level of the seating plane of pin for 5−10seconds. Then, immerse in melted solder at 235±5°c for 2±0.5 second and raise slowly.			
Temperature Cycling		There shall be no mechanical damage. $\Delta R: \mbox{Within $\pm 0.5\%$}$	Based on JIS C 5202 7.4 After repeating the 5 cycles shown in the table below, maintain room temperature for 1—2 hours, then measure. Stage 1 2 3 4 Temp.(°C) -55±3 Room Temp. 125±2 Room Temp. Time (min.) 30 2 to 3 30 2 to 3			
Humidity		There shall be no noticeable abnormalities in appearance. ΔR: Within ±2.0%	Maintain without load at a constant temperature 40±2°C and constant humidity of 90−95% for 1000± ⁴⁸ 8 hours. Remove and maintain at room temperature for over 1 hour, then measure.			
Humidity Load		There shall be no noticeable abnormalities in appearance. ΔR: Within ±2.0%	Apply the rated voltage intermittently, 1.5 hours on and 0.5 hours off in a chamber at a constant temperature of 40±2℃ and constant humidity of 90−95% for 1000±⁴8 hours. Remove and maintain at room temperature for over 1 hour, then measure.			
		There shall be no noticeable abnormalities in appearance. ΔR: Within ±2.0%	Apply the rated voltage intermittently, 1.5 hours on and 0.5 hours off in a high-temperature chamber at 70±3℃ for 1000± ⁴⁸ hours. Remove and maintain at room temperature for over 1 hour, then measure.			

Packaging

- 1. R-networks are available in two types of taping : 3-pin taping and all-pin taping.
- $2.\ 3\mbox{-pin}$ taping type is applicable to automatic insertion equivalent to 5mm pitch radial taping parts. The tips of untaped terminals are shaped by a V-cut for high accuracy insertion.

⚠Caution/Notice

■ ① Caution

Use within rated voltage
To avoid resistor burning or breakdown, do not use
beyond the rated voltage calculated by taking the square
root of the product or rated power and nominal resistance
value.

■Notice

- Handling after mounting to PCB
 Do not bend the product after mounting and soldering the product. If subjected to mechanical stress, the resistor may become damaged.
- Confirmation of resistor operation in application Ensure proper performance of the product in your application.
- 3. Environmental conditions

 Do not use or store the product in locations containing corrosive gasses (Cl₂, H₂S, NH₃, SO₂, NO_x, etc.) or having such high humidity as will dew as the product's resin coating does not form a perfect seal.
