

# UC184xA/284xA/384xA

## CURRENT MODE PWM CONTROLLER

### PRODUCTION DATA SHEET

#### ABSOLUTE MAXIMUM RATINGS (Note 1)

|                                                            |                 |
|------------------------------------------------------------|-----------------|
| Supply Voltage (Low Impedance Source) ( $V_{CC}$ )         | 30V             |
| Supply Voltage ( $I_{CC} < 30mA$ )                         | Self Limiting   |
| Output Current                                             | $\pm 1A$        |
| Output Energy (Capacitive Load)                            | 5 $\mu J$       |
| Analog Inputs ( $V_{FB}$ & $I_{SENSE}$ )                   | -0.3V to +6.3V  |
| Error Amp Output Sink Current                              | 10mA            |
| Power Dissipation at $T_A = 25^\circ C$ (M Package)        | 1W              |
| Storage Temperature Range                                  | -65°C to +150°C |
| Lead Temperature (Soldering, 10 Seconds)                   | 300°C           |
| Peak Package Solder Reflow Temp. (40 second max. exposure) | 260°C (+0, -5)  |

Note 1. Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground. Currents are positive into, negative out of the specified terminal. Pin numbers refer to DIL packages only.

#### THERMAL DATA

##### M PACKAGE:

|                                                       |        |
|-------------------------------------------------------|--------|
| THERMAL RESISTANCE-JUNCTION TO AMBIENT, $\theta_{JA}$ | 95°C/W |
|-------------------------------------------------------|--------|

##### DM PACKAGE:

|                                                       |         |
|-------------------------------------------------------|---------|
| THERMAL RESISTANCE-JUNCTION TO AMBIENT, $\theta_{JA}$ | 165°C/W |
|-------------------------------------------------------|---------|

##### D PACKAGE:

|                                                       |         |
|-------------------------------------------------------|---------|
| THERMAL RESISTANCE-JUNCTION TO AMBIENT, $\theta_{JA}$ | 120°C/W |
|-------------------------------------------------------|---------|

##### Y PACKAGE:

|                                                       |         |
|-------------------------------------------------------|---------|
| THERMAL RESISTANCE-JUNCTION TO AMBIENT, $\theta_{JA}$ | 130°C/W |
|-------------------------------------------------------|---------|

Junction Temperature Calculation:  $T_J = T_A + (P_D \times \theta_{JA})$ .

The  $\theta_{JA}$  numbers are guidelines for the thermal performance of the device/pc-board system.

All of the above assume no ambient airflow

## PRODUCTION DATA SHEET

## ELECTRICAL CHARACTERISTICS

(Unless otherwise specified, these specifications apply over the operating ambient temperatures for UC384xA with  $0^{\circ}\text{C} \leq T_A \leq 70^{\circ}\text{C}$ , UC284xA with  $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$ , UC184xA with  $-55^{\circ}\text{C} \leq T_A \leq 125^{\circ}\text{C}$ ;  $V_{CC}=15\text{V}$ ;  $R_I=10\text{K}$ ;  $C_I=3.3\text{nF}$ . Low duty cycle pulse testing techniques are used which maintains junction and case temperatures equal to the ambient temperature.)

### PRODUCTION DATA SHEET

#### ELECTRICAL CHARACTERISTICS (Con't.)

| Parameter                            | Symbol          | Test Conditions        | UC184xA/284xA |      |      | UC384xA |      |      | Units |
|--------------------------------------|-----------------|------------------------|---------------|------|------|---------|------|------|-------|
|                                      |                 |                        | Min.          | Typ. | Max. | Min.    | Typ. | Max. |       |
| ► Under-Voltage Lockout Section      |                 |                        |               |      |      |         |      |      |       |
| Start Threshold                      |                 | x842A/4A               | 15            | 16   | 17   | 14.5    | 16   | 17.5 | V     |
|                                      |                 | x843A/5A               | 7.8           | 8.4  | 9.0  | 7.8     | 8.4  | 9.0  | V     |
| Min. Operation Voltage After Turn-On |                 | x842A/4A               | 9             | 10   | 11   | 8.5     | 10   | 11.5 | V     |
|                                      |                 | x843A/5A               | 7.0           | 7.6  | 8.2  | 7.0     | 7.6  | 8.2  | V     |
| ► PWM Section                        |                 |                        |               |      |      |         |      |      |       |
| Maximum Duty Cycle                   |                 | x842A/3A               | 94            | 96   | 100  | 94      | 96   | 100  | %     |
|                                      |                 | x844A/5A               | 47            | 48   | 50   | 47      | 48   | 50   | %     |
| Minimum Duty Cycle                   |                 |                        |               |      | 0    |         |      | 0    | %     |
| ► Total Standby Section              |                 |                        |               |      |      |         |      |      |       |
| Start-Up Current                     |                 |                        |               | 0.3  | 0.5  |         | 0.3  | 0.5  | mA    |
| Operating Supply Current             | I <sub>CC</sub> |                        |               | 11   | 17   |         | 11   | 17   | mA    |
| Zener Voltage                        | V <sub>Z</sub>  | I <sub>CC</sub> = 25mA | 30            | 35   |      | 30      | 35   |      | V     |

Notes: 2. These parameters, although guaranteed, are not 100% tested in production.

3. Parameter measured at trip point of latch with  $V_{VFB} = 0$ .

4. Gain defined as:  $A_{VOL} = \frac{\Delta V_{COMP}}{\Delta V_{ISENSE}}$ ;  $0 \leq V_{ISENSE} \leq 0.8V$ .

5. Adjust  $V_{CC}$  above the start threshold before setting at 15V.

6. Output frequency equals oscillator frequency for the UC1842A and UC1843A. Output frequency is one half oscillator frequency for the UC1844A and UC1845A.

7. "Temperature stability, sometimes referred to as average temperature coefficient, is described by the equation:

$$\text{Temp Stability} = \frac{V_{REF}(\text{max.}) - V_{REF}(\text{min.})}{T_j(\text{max.}) - T_j(\text{min.})}$$

$V_{REF}(\text{max.})$  &  $V_{REF}(\text{min.})$  are the maximum & minimum reference voltage measured over the appropriate temperature range. Note that the extremes in voltage do not necessarily occur at the extremes in temperature."

#### BLOCK DIAGRAM

\* -  $V_{CC}$  and  $V_c$  are internally connected for 8 pin packages.

\*\* -  $POWER GROUND$  and  $GROUND$  are internally connected for 8 pin packages.

\*\*\* - Toggle flip flop used only in x844A and x845A series.

#### CHARACTERISTIC CURVES

**FIGURE 1.** — OSCILLATOR FREQUENCY vs. TIMING RESISTOR

Note: Output drive frequency is half the oscillator frequency for the UCx844A/5A devices.

**FIGURE 2.** — MAXIMUM DUTY CYCLE vs. TIMING RESISTOR

## CURRENT MODE PWM CONTROLLER

### PRODUCTION DATA SHEET

#### TYPICAL APPLICATION CIRCUITS

**FIGURE 3. — CURRENT SENSE SPIKE SUPPRESSION**

The RC low pass filter will eliminate the leading edge current spike caused by parasitics of Power MOSFET.

**FIGURE 4. — MOSFET PARASITIC OSCILLATIONS**

A resistor ( $R_1$ ) in series with the MOSFET gate will reduce overshoot & ringing caused by the MOSFET input capacitance and any inductance in series with the gate drive. (Note: It is very important to have a low inductance ground path to insure correct operation of the I.C. This can be done by making the ground paths as short and as wide as possible.)

**FIGURE 5. — EXTERNAL DUTY CYCLE CLAMP AND MULTI-UNIT SYNCHRONIZATION**

#### TYPICAL APPLICATION CIRCUITS (continued)

FIGURE 6. — SLOPE COMPENSATION

Due to inherent instability of current mode converters running above 50% duty cycle, slope compensation should be added to either the current sense pin or the error amplifier. Figure 6 shows a typical slope compensation technique.

FIGURE 7. — OPEN LOOP LABORATORY FIXTURE

High peak currents associated with capacitive loads necessitate careful grounding techniques. Timing and bypass capacitors should be connected to pin 5 in a single point ground. The transistor and 5k potentiometer are used to sample the oscillator waveform and apply an adjustable ramp to pin 3.

#### SPECIFICATIONS

|                               |                 |
|-------------------------------|-----------------|
| Input line voltage:           | 90VAC to 130VAC |
| Input frequency:              | 50 or 60Hz      |
| Switching frequency:          | 40KHz $\pm$ 10% |
| Output power:                 | 25W maximum     |
| Output voltage:               | 5V $\pm$ 5%     |
| Output current:               | 2 to 5A         |
| Line regulation:              | 0.01%/V         |
| Load regulation:              | 8%/A*           |
| Efficiency @ 25 Watts,        |                 |
| $V_{IN} = 90VAC$ :            | 70%             |
| $V_{IN} = 130VAC$ :           | 65%             |
| Output short-circuit current: | 2.5Amp average  |

\* This circuit uses a low-cost feedback scheme in which the DC voltage developed from the primary-side control winding is sensed by the UC3844A error amplifier. Load regulation is therefore dependent on the coupling between secondary and control windings, and on transformer leakage inductance.
