X = Do not care

ABSOLUTE MAXIMUM RATINGS $T_A = 25\text{ }^\circ\text{C}$, unless otherwise noted			
Parameter		Limit	Unit
Reference to GND	V+	- 0.3 to 5.0	V
	IN, COM, NC, NO ^a	- 0.3 to (V+ + 0.3)	
Current (Any terminal except NO, NC or COM)		30	mA
Continuous Current (NO, NC, or COM)		± 300	
Peak Current (Pulsed at 1 ms, 10 % duty cycle)		± 500	
Storage Temperature (D Suffix)		- 65 to 150	$^\circ\text{C}$
Package Solder Reflow Conditions ^d	16-Pin QFN (3 x 3 mm)	250	
Power Dissipation (Packages) ^b	QFN-16 ^c	1385	mW

Notes:

- a. Signals on NC, NO, or COM or IN exceeding V+ will be clamped by internal diodes. Limit forward diode current to maximum current ratings.
- b. All leads welded or soldered to PC Board.
- c. Derate 17.3 mW/ $^\circ\text{C}$ above 70 $^\circ\text{C}$.
- d. Manual soldering with iron is not recommended for leadless components. The QFN is a leadless package. The end of the lead terminal is exposed copper (not plated) as a result of the singulation process in manufacturing. A solder fillet at the exposed copper lip cannot be guaranteed and is not required to ensure adequate bottom side solder interconnection.

SPECIFICATIONS							
Parameter	Symbol	Test Conditions Otherwise Unless Specified $V_+, \pm 10\%$, $V_{IN} = 0.4$ or 1.8 V^e	Temp ^a	Limits - 40 to 85 $^\circ\text{C}$			Unit
				Min ^b	Typ ^c	Max ^b	
Analog Switch							
Analog Signal Range ^d	V_{NO}, V_{NC}, V_{COM}		Full	0		V+	V

Notes:

- a. Room = 25 °C, Full = as determined by the operating suffix.
- b. Typical values are for design aid only, not guaranteed nor subject to production testing.
- c. The algebraic convention where by the most negative value is a minimum and the most positive a maximum, is used in this datasheet.
- d. Guarantee by design, not subjected to production test.
- e. V_{IN} = input voltage to perform proper function.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

TYPICAL CHARACTERISTICS $T_A = 25\text{ }^\circ\text{C}$, unless otherwise noted

$r_{DS(on)}$ vs. V_{COM} and Supply Voltage

$r_{DS(on)}$ vs. Analog Voltage and Temperature

Supply Current vs. Temperature

Supply Current vs. Input Switching Frequency

Leakage Current vs. Temperature

Leakage Current vs. Analog Voltage

TYPICAL CHARACTERISTICS $T_A = 25\text{ }^\circ\text{C}$, unless otherwise noted

TEST CIRCUITS

C_L (includes fixture and stray capacitance)

$$V_{OUT} = V_{COM} \left(\frac{R_L}{R_L + R_{ON}} \right)$$

Logic "1" = Switch On
Logic input waveforms inverted for switches that have the opposite logic sense.

Figure 1. Switching Time

C_L (includes fixture and stray capacitance)

Figure 2. Break-Before-Make Interval

IN depends on switch configuration: input polarity determined by sense of switch.
