

MAX6800/MAX6801/ MAX6802

3-Pin, Low-Power μP Reset Circuits

Absolute Maximum Ratings

Terminal Voltage (with respect to GND)
 V_{CC}-0.3V to +6V
 Push/Pull RESET, $\overline{\text{RESET}}$-0.3V to ($V_{CC} + 0.3\text{V}$)
 Open-Drain $\overline{\text{RESET}}$-0.3V to +6V
 Input Current (V_{CC}).....20mA
 Output Current (RESET, $\overline{\text{RESET}}$).....20mA
 Continuous Power Dissipation ($T_A = +70^\circ\text{C}$)
 3-Pin SOT23 (derate 4mW/ $^\circ\text{C}$ above $+70^\circ\text{C}$).....320mW

Operating Temperature Range..... -40°C to $+125^\circ\text{C}$
 Junction Temperature..... $+150^\circ\text{C}$
 Storage Temperature Range..... -65°C to $+150^\circ\text{C}$
 Lead Temperature (soldering, 10s)..... $+300^\circ\text{C}$
 Soldering Temperature (reflow)..... $+300^\circ\text{C}$
 Lead (Pb)-free packages..... $+260^\circ\text{C}$
 Package containing lead (Pb)..... $+240^\circ\text{C}$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Electrical Characteristics

(V_{CC} = full range, $T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$, unless otherwise noted. Typical values are at $V_{CC} = +5.0\text{V}$ and $T_A = +25^\circ\text{C}$, reset not asserted.) (Note 1)

PARAMETER	SYMBOL	CONDITIONS		MIN	TYP	MAX	UNITS
Supply Voltage Range (Note 2)	V_{CC}	$T_A = 0^\circ\text{C}$ to $+125^\circ\text{C}$	MAX6800/MAX6801	0.7		5.5	V
			MAX6802	1.0		5.5	
		$T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$	MAX6800/MAX6801	0.78		5.5	
			MAX6802	1.2		5.5	
Supply Current	I_{CC}	No load	$V_{CC} = +3.0\text{V}$		4	10	μA
			$V_{CC} = +5.0\text{V}$		5	12	
Reset Threshold	V_{TH}	MAX680_UR__D_-T, Table 1	$T_A = +25^\circ\text{C}$	V_{TH} - 1.8%	V_{TH}	V_{TH} + 1.8%	V
			$T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$	V_{TH} - 3%	V_{TH}	V_{TH} + 3%	
V_{CC} Falling Reset Delay		V_{CC} falling at 10V/ms			30		μs
Reset Active Timeout Period	t_{RP}	MAX680_UR__D1-T		1	1.5	2	ms
		MAX680_UR__D2-T		20	30	40	
		MAX680_UR__D3-T		100	150	200	
$\overline{\text{RESET}}$ Output Low-Voltage (MAX6801/MAX6802)	V_{OL}	Reset asserted	$I_{SINK} = 50\mu\text{A}$, $V_{CC} \geq 1.0\text{V}$			0.4	V
			$I_{SINK} = 1.2\text{mA}$, $V_{CC} \geq 2.5\text{V}$			0.3	
			$I_{SINK} = 1.2\text{mA}$, $V_{CC} \geq 4.25\text{V}$			0.4	
$\overline{\text{RESET}}$ Output High-Voltage (MAX6801)	V_{OH}	Reset not asserted	$I_{SOURCE} = 500\mu\text{A}$, $V_{CC} \geq 3.0\text{V}$	$0.8 \times V_{CC}$			V
			$I_{SOURCE} = 800\mu\text{A}$, $V_{CC} \geq 5.0\text{V}$	$0.8 \times V_{CC}$			
RESET Output Voltage (MAX6800)	V_{OH}	Reset asserted	$I_{SOURCE} = 1\mu\text{A}$, $V_{CC} \geq 1.0\text{V}$	$0.8 \times V_{CC}$			V
			$I_{SOURCE} = 200\mu\text{A}$, $V_{CC} \geq 1.8\text{V}$	$0.8 \times V_{CC}$			
			$I_{SOURCE} = 800\mu\text{A}$, $V_{CC} \geq 4.25\text{V}$	$0.8 \times V_{CC}$			
	V_{OL}	Reset not asserted	$I_{SINK} = 1.2\text{mA}$, $V_{CC} \geq 3.0\text{V}$			0.3	
			$I_{SINK} = 3.2\text{mA}$, $V_{CC} \geq 5.0\text{V}$			0.4	
$\overline{\text{RESET}}$ Output Leakage Current (MAX6802)		$V_{CC} > V_{TH}$, $\overline{\text{RESET}}$ not asserted				0.5	μA

Note 1: All parts are production tested at $T_A = +25^\circ\text{C}$. Overtemperature limits are guaranteed by design and not production tested.

Note 2: I_{SOURCE} for the MAX6800 is 100nA. I_{SINK} for the MAX6801 is 100nA. I_{SINK} for the MAX6802 is 50μA.

Typical Operating Characteristics

(Reset not asserted, $T_A = +25^\circ\text{C}$, unless otherwise noted.)

Pin Configuration

Pin Description

PIN		NAME	FUNCTION
MAX6800	MAX6801/ MAX6802		
1	1	GND	Ground
—	2	$\overline{\text{RESET}}$	Active-Low Reset Output. $\overline{\text{RESET}}$ is asserted while V_{CC} is below the reset threshold and remains asserted for a reset timeout period (t_{RP}) after V_{CC} rises above the reset threshold. $\overline{\text{RESET}}$ on the MAX6801 is push/pull. $\overline{\text{RESET}}$ on the MAX6802 is open-drain.
2	—	RESET	Active-High Reset Output. RESET is asserted while V_{CC} is below the reset threshold and remains asserted for a reset timeout period (t_{RP}) after V_{CC} rises above the reset threshold. RESET on the MAX6800 is push/pull.
3	3	V_{CC}	Supply Voltage Input

Applications Information

Interfacing to μPs with Bidirectional Reset Pins

Since the $\overline{\text{RESET}}$ output on the MAX6802 is open-drain, this device interfaces easily with μPs that have bidirectional reset pins, such as the Motorola 68HC11. Connecting the μP supervisor's $\overline{\text{RESET}}$ output directly to the microcontroller's (μC's) $\overline{\text{RESET}}$ pin with a single pullup resistor allows either device to assert reset (Figure 1).

Negative-Going V_{CC} Transients

In addition to issuing a reset to the μP during power-up, power-down, and brownout conditions, these devices are relatively immune to short-duration, negative-going V_{CC} transients (glitches). The *Typical Operating Characteristics* show the Maximum Transient Duration vs. Reset Comparator Overdrive graph. The graph shows the maximum pulse width that a negative-going V_{CC} transient may typically have without issuing a reset signal. As the amplitude of the transient increases, the maximum allowable pulse width decreases.

Figure 1. Interfacing to μPs with Bidirectional Reset Pins

Ensuring a Valid Reset Output Down to $V_{CC} = 0V$

When V_{CC} falls below 1V and approaches the minimum operating voltage of 0.7V, push/pull-structured reset sinking (or sourcing) capabilities decrease drastically. High-impedance CMOS-logic inputs connected to the $\overline{\text{RESET}}$ pin can drift to indeterminate voltages. This does not present a problem in most cases, since most μPs and circuitry do not operate when V_{CC} drops below 1V. For the MAX6801 application, where $\overline{\text{RESET}}$ must be valid down to 0V, adding a pulldown resistor between $\overline{\text{RESET}}$ and GND removes stray leakage currents, holding $\overline{\text{RESET}}$ low (Figure 2a). The pulldown resistor value is not critical; 100kΩ is large enough not to load $\overline{\text{RESET}}$ and small enough to pull it low. For the MAX6800 application, where $\overline{\text{RESET}}$ must be valid to $V_{CC} = 0V$, a 100kΩ pullup resistor between $\overline{\text{RESET}}$ and V_{CC} will hold $\overline{\text{RESET}}$ high when V_{CC} falls below 0.7V (Figure 2b).

Since the MAX6802 has an open-drain, active-low output, it typically uses a pullup resistor. With this device, $\overline{\text{RESET}}$ will most likely not maintain an active condition, but will drift to a non-active level due to the pullup resistor and the reduced sinking capability of the open-drain device. Therefore, this device is not recommended for applications where the $\overline{\text{RESET}}$ pin is required to be valid down to $V_{CC} = 0V$.

Figure 2. Ensuring Reset Valid Down to $V_{CC} = 0V$

Table 1. Factory-Trimmed Reset Thresholds

*Sample stock is generally held on all standard versions.

Ordering Information

PART	TEMP RANGE	PIN-PACKAGE
MAX6800UR__D__-T	-40°C to +125°C	3 SOT23
MAX6801UR__D__-T	-40°C to +125°C	3 SOT23
MAX6802UR__D__-T	-40°C to +125°C	3 SOT23

*These devices are available in factory-set V_{CC} reset thresholds from 2.63V to 4.80V, in approximately 0.1V increments. Choose the desired reset threshold suffix from Table 1 and insert it in the blanks following "UR" in the part number. Factory-programmed reset timeout periods are also available. Insert the number corresponding to the desired nominal reset timeout period (1 = 1ms min, 2 = 20ms min, 3 = 100ms min) in the blank following "D" in the part number. There are 15 standard versions with a required order increment of 2500 pieces. Sample stock is generally held on the standard versions only (see Selector Guide). Contact the factory for availability of non-standard versions (required order increment is 10,000 pieces). All devices available in tape-and-reel only.

Devices are available in both leaded and lead-free packaging. Specify lead-free by replacing "-T" with "+T" when ordering.

Chip Information

PROCESS: BiCMOS

Package Information

For the latest package outline information and land patterns (footprints), go to www.maximintegrated.com/packages. Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

PACKAGE TYPE	PACKAGE CODE	OUTLINE NO.	LAND PATTERN NO.
3 SOT23	U3-1	21-0051	90-0179
