F²MC-16LX MB90550A/550B Series

**MB90552A/552B/553A/553B/T552A/T553A
MB90F553A/P553A/V550A**

■ DESCRIPTION

The MB90550A/550B series is a line of general-purpose, high-performance, 16-bit microcontrollers designed for applications which require high-speed real-time processing, such as industrial machines, OA equipment, and process control systems.

While inheriting the AT architecture of the F²MC*-8 family, the instruction set for the MB90550A/550B series incorporates additional instructions for high-level languages, supports extended addressing modes, and contains enhanced multiplication and division instructions as well as a substantial collection of improved bit manipulation instructions. In addition, the MB90550A/550B has an on-chip 32-bit accumulator which enables processing of long-word data.

MB90552B and MB90553B are radiation noise decreased type. There are no change in the functional specification.

*: F²MC is the abbreviation of FUJITSU MICROELECTRONICS Flexible Microcontroller.

■ FEATURES

- Minimum instruction execution time: 62.5 ns (at oscillation of 4 MHz, × four times the PLL clock)
- Maximum memory space: 16 Mbytes

(Continued)

The information for microcontroller supports is shown in the following homepage.
Be sure to refer to the "Check Sheet" for the latest cautions on development.

"Check Sheet" is seen at the following support page

"Check Sheet" lists the minimal requirement items to be checked to prevent problems beforehand in system development.

<http://edevic.fujitsu.com/micom/en-support/>

MB90550A/550B Series

(Continued)

- Instruction set optimized for controller applications
Supported data types: Bit, byte, word and long word
Typical addressing mode: 23 types
Enhanced precision calculation realized by 32-bit accumulator
Enhanced signed multiplication/division instruction and RETI instruction functions
- Instruction set designed for high level language (C) and multi-task operations
Adoption of system stack pointer
Symmetrical instruction set and barrel shift instructions
- Integrated address match detection function (for two address pointers)
- Faster execution speed: 4-byte queue
- Powerful interrupt functions (Eight priority levels programmable)
External interrupt inputs: 8 channels
- Data transfer functions (Intelligent I/O service): Up to 16 channels
DTP request inputs: 8 channels
- Embedded ROM size (EPROM, Flash: 128 Kbytes)
Mask ROM: 64 Kbytes/128 Kbytes
- Embedded RAM size (EPROM, Flash: 4 Kbytes)
Mask ROM: 2 Kbytes/4 Kbytes
- General-purpose ports: Up to 83 channels
(Input pull-up resistor settable for: 16 channels; Open drain settable for: 8 channels; I/O open drains: 6 channels)
- A/D converter (RC successive approximation type): 8 channels
(Resolution: 8 or 10 bits selectable; Conversion time of 26.3 μ s minimum)
- UART: 1 channel
- Extended I/O serial interface: 2 channels
- I²C interface: 2 channels
(Two channels, including one switchable between terminal input and output)
- 16-bit reload timer: 2 channels
- 8/16-bit PPG timer: 3 channels
(8 bits \times 2 channels; 16 bits \times 1 channel: Mode switching function provided)
- 16-bit I/O timer
(Input capture \times 4 channels, output compare \times 4 channels, free run timer \times 1 channel)
- Clock monitor function integrated (Delivering the oscillation clock divided by 21 to 28)
- Timebase timer/watchdog timer: 18 bits
- Low power consumption modes (sleep, stop, hardware standby, and CPU intermittent operation modes)
- Package: QFP-100, LQFP-100
- CMOS technology

MB90550A/550B Series

■ PRODUCT LINEUP

Part number Item		MB90552A MB90552B	MB90553A MB90553B	MB90F553A	MB90P553A	MB90T552A	MB90T553A	MB90V550A
		Mask ROM products		Flash ROM products	OTP	External ROM products		Evaluation product
Classification		Mass Product						
ROM size		64 Kbytes	128 Kbytes			None		None
RAM size		2 Kbytes	4 Kbytes			2 Kbytes	4 Kbytes	6 Kbytes
CPU functions		The number of instructions: 340 Instruction bit length: 8 bits, 16 bits Instruction length: 1 byte to 7 bytes Data bit length: 1 bit, 8 bits, 16 bits Minimum execution time: 62.5 ns (at machine clock of 16 MHz) Interrupt processing time: 1.5 μs (at machine clock of 16 MHz, minimum value)						
Ports		General-purpose I/O ports (CMOS output): 53 General-purpose I/O ports (with pull-up resistor): 16 General-purpose I/O ports (N-channel open-drain output): 6 General-purpose I/O ports (N-channel open-drain function selectable): 8 Total: 83						
UART (SCI)		Clock synchronized transmission (62.5 Kbps to 2 Mbps) Clock asynchronized transmission (62500 bps to 9615 bps) Transmission can be performed by bi-directional serial transmission or by master/slave connection.						
8/10-bit A/D converter		Conversion precision: 8/10-bit can be selectively used. Number of inputs: 8 One-shot conversion mode (converts selected channel only once) Scan conversion mode (converts two or more successive channels and can program up to 8 channels.) Continuous conversion mode (converts selected channel continuously) Stop conversion mode (converts selected channel and stop operation repeatedly)						
8/16-bit PPG timer		Number of channels: 3 (8-bit × 6 channels) PPG operation of 8-bit or 16-bit A pulse wave of given intervals and given duty ratios can be output. Pulse interval: 62.5 ns to 1 ms (at oscillation of 4 MHz, machine clock of 16 MHz)						
16-bit I/O timer	16-bit free run timer	Number of channels: 1 Overflow interrupts						
	Output compare (OCU)	Number of channels: 4 Pin input factor: A match signal of compare register						
	Input capture (ICU)	Number of channels: 4 Rewriting a register value upon a pin input (rising, falling or both edges)

■ DIFFERENCES AMONG PRODUCTS

Memory Size

In evaluation with an evaluation product, note the difference between the evaluation product and the product actually used. The following items must be taken into consideration.

- The MB90V550A does not have an internal ROM. However, operations equivalent to those performed by a chip with an internal ROM can be evaluated by using a dedicated development tool, enabling selection of ROM size by setting the development tool.
- In the MB90V550A, images from FF4000_H to FFFFFFF_H are mapped to bank 00, and FE0000_H to FF3FFF_H are mapped to bank FE and FF only. (This setting can be changed by configuring the development tool.)
- In the MB90F553A/553A/553B/552A/552B, images from FF4000_H to FFFFFFF_H are mapped to bank 00, and FF0000_H to FF3FFF_H to bank FF only.

■ PIN DESCRIPTION

Pin no.		Pin name	Circuit type	Function
QFP	LQFP			
82	80	X0	A	Oscillation pin
83	81	X1	A	Oscillation pin
77	75	$\overline{\text{RST}}$	B	Reset input pin
52	50	$\overline{\text{HST}}$	C	Hardware standby input pin
85 to 92	83 to 90	P00 to P07	D (CMOS)	General-purpose I/O ports. A pull-up resistor can be added (RD07 to RD00 = 1) by using the pull-up resistor setting register (RDR0). D07 to D00 = 1: Disabled when the port is set for output.
		AD00 to AD07		Serve as lower data I/O/lower address output (AD00 to AD07) pins in the external bus mode.
93 to 100	91 to 98	P10 to P17	D (CMOS)	General-purpose I/O ports. A pull-up resistor can be added (RD17 to RD10 = 1) by using the pull-up resistor setting register (RDR1). D17 to D10 = 1: Disabled when the port is set for output.
		AD08 to AD15		Serve as upper data I/O/middle address output (AD08 to AD15) pins in the 16-bit bus-width, external bus mode.
1 to 8	99,100, 1 to 6	P20 to P27	E (CMOS)	General-purpose I/O ports. This function is enabled either in single-chip mode or with the external address output control register set to "Port".
		A16 to A23		External address bus A16 to A23 output pins. This function is enabled in an external-bus enabled mode with the external address output register set to "Address".
9	7	P30	E (CMOS)	General-purpose I/O port. This function is enabled in single-chip mode.
		ALE		Address latch enable output pin. This function is enabled in an external-bus enabled mode.
10	8	P31	E (CMOS)	General-purpose I/O port. This function is enabled in single-chip mode.
		$\overline{\text{RD}}$		Read strobe output pin for the data bus. This function is enabled in an external-bus enabled mode.
12	10	P32	E (CMOS)	General-purpose I/O port. This function is enabled in single-chip mode.
		$\overline{\text{WRL}}$		Write strobe output pin for the lower eight bits of the data bus. This function is enabled in an external-bus enabled mode.
13	11	P33	E (CMOS)	General-purpose I/O port. This function is enabled in single-chip mode.
		$\overline{\text{WRH}}$		Write strobe output pin for the upper eight bits of the data bus. This function is enabled in an external-bus enabled mode.

(Continued)

MB90550A/550B Series

Pin no.		Pin name	Circuit type	Function
QFP	LQFP			
14	12	P34	E (CMOS)	General-purpose I/O port. This function is enabled in single-chip mode
		HRQ		Hold request input pin. This function is enabled in an external-bus enabled mode.
15	13	P35	E (CMOS)	General-purpose I/O port. This function is enabled in single-chip mode.
		$\overline{\text{HAK}}$		Hold acknowledge output pin. This function is enabled in an external-bus enabled mode.
16	14	P36	E (CMOS)	General-purpose I/O port. This function is enabled in single-chip mode.
		RDY		Ready signal input pin. This function is enabled in an external-bus enabled mode.
17	15	P37	E (CMOS)	General-purpose I/O port. This function is enabled in single-chip mode.
		CLK		CLK output pin. This function is enabled in an external-bus enabled mode.
18	16	P40	F (CMOS/H)	General-purpose I/O port. Serves as an open-drain output port (OD40 = 1) depending on the setting of the open-drain control setting register (ODR4). (D40 = 0: Disabled when the port is set for input.)
		SCK		UART serial clock I/O pin. This function is enabled with the UART clock output enabled.
19	17	P41	F (CMOS/H)	General-purpose I/O port. Serves as an open-drain output port (OD41 = 1) depending on the setting of the open-drain control setting register (ODR4). (D41 = 0: Disabled when the port is set for input.)
		SOT		UART serial data output pin. This function is enabled with the UART serial data output enabled.
20	18	P42	F (CMOS/H)	General-purpose I/O port. Serves as an open-drain output port (OD42 = 1) depending on the setting of the open-drain control setting register (ODR4). (D42 = 0: Disabled when the port is set for input.)
		SIN		UART serial data input pin. Since this input is used as required while the UART is operating for input, the output by any other function must be off unless used intentionally.
21	19	P43	F (CMOS/H)	General-purpose I/O port. Serves as an open-drain output port (OD43 = 1) depending on the setting of the open-drain control setting register (ODR4). (D43 = 0: Disabled when the port is set for input.)
		SCK1		Extended I/O serial clock I/O pin. This function is enabled with the extended I/O serial clock output enabled.

(Continued)

MB90550A/550B Series

Pin no.		Pin name	Circuit type	Function
QFP	LQFP			
22	20	P44	F (CMOS/H)	General-purpose I/O port. Serves as an open-drain output port (OD44 = 1) depending on the setting of the open-drain control setting register (ODR4). (D44 = 0: Disabled when the port is set for input.)
		SOT1		Extended I/O serial data output pin. This function is enabled with the extended I/O serial data output enabled.
24	22	P45	F (CMOS/H)	General-purpose I/O port. Serves as an open-drain output port (OD45 = 1) depending on the setting of the open-drain control setting register (ODR4). (D45 = 0: Disabled when the port is set for input.)
		SIN1		Extended I/O serial data input pin. Since this input is used as required while the extended I/O serial interface is operating for input, the output by any other function must be off unless used intentionally.
25	23	P46	F (CMOS/H)	General-purpose I/O port. Serves as an open-drain output port (OD46 = 1) depending on the setting of the open-drain control setting register (ODR4). (D46 = 0: Disabled when the port is set for input.)
		ADTG		A/D converter external trigger input pin. Since this input is used as required while the A/D converter is operating for input, the output by any other function must be off unless used intentionally.
26	24	P47	F (CMOS/H)	General-purpose I/O port. Serves as an open-drain output port (OD47 = 1) depending on the setting of the open-drain control setting register (ODR4). D47 = 0: Disabled when the port is set for input.
		SCK0		Extended I/O serial clock I/O pin. This function is enabled with the extended I/O serial clock output enabled.
27	25	C	—	Capacitance pin for regulating the power supply. Connect an external ceramic capacitor of about 0.1 μ F.
28	26	P50	G (NchOD/H)	N-channel open-drain I/O port.
		SDA0		I ² C interface data I/O pin. This function is enabled with the I ² C interface enabled for operation. While the I ² C interface is operating, place the port output in the Hi-Z state (PDR = 1).
		SOT0		Extended I/O serial data output pin. This function is enabled with the extended I/O serial data output enabled.

(Continued)

MB90550A/550B Series

Pin no.		Pin name	Circuit type	Function
QFP	LQFP			
29	27	P51	G (NchOD/H)	N-channel open-drain I/O port.
		SCL0		I ² C interface clock I/O pin. This function is enabled with the I ² C interface enabled for operation. While the I ² C interface is operating, place the port output in the Hi-Z state (PDR = 1).
		SIN0		Extended I/O serial data input pin. Since this input is used as required while the extended I/O serial interface is operating for input, the output by any other function must be off unless used intentionally.
30,32	28,30	P52,P54	G (NchOD/H)	N-channel open-drain I/O ports.
		SDA1,SDA2		I ² C interface data I/O pins. This function is enabled with the I ² C interface enabled for operation. While the I ² C interface is operating, place the port output in the Hi-Z state (PDR = 1).
31,33	29,31	P53,P55	G (NchOD/H)	N-channel open-drain I/O ports.
		SCL1,SCL2		I ² C interface clock I/O pins. This function is enabled with the I ² C interface enabled for operation. While the I ² C interface is operating, place the port output in the Hi-Z state (PDR = 1).
38 to 41, 43 to 46	36 to 39, 41 to 44	P60 to P67	H (CMOS/H)	General-purpose I/O ports.
		AN0 to AN7		A/D converter analog input pin. This function is enabled with the analog input enabled.
47,48, 53 to 58	45,46, 51 to 56	P70 to P77	I (CMOS/H)	General-purpose I/O ports.
		IRQ0 to IRQ7		External interrupt request input pins. Since this input is used as required while external interrupts remain enabled, the output by any other function must be off unless used intentionally.
59,60	57,58	P80,P81	J (CMOS/H)	General-purpose I/O ports.
		TIN0,TIN1		Reload timer event input pins. Since this input is used as required while the reload timer is operating for input, the output by any other function must be off unless used intentionally.
61,62	59,60	P82,P83	J (CMOS/H)	General-purpose I/O ports.
		TOT0,TOT1		Reload timer output pins. This function is enabled with reload timer output enabled.
63 to 66	61 to 64	P84 to P87	J (CMOS/H)	General-purpose I/O ports.
		IN0 to IN3		Input capture trigger input pins. Since this input is used as required while the input capture unit is operating for input, the output by any other function must be off unless used intentionally.
67,68	65,66	P90,P91	J (CMOS/H)	General-purpose I/O ports.
		OUT0,OUT1		Output compare event output pins.

(Continued)

MB90550A/550B Series

(Continued)

Pin no.		Pin name	Circuit type	Function
QFP	LQFP			
69 to 74	67 to 72	P92 to P97	J (CMOS/H)	General-purpose I/O ports.
		PPG0 to PPG5		PPG output pins. This function is enabled with the PPG output enabled.
75,76	73,74	PA0,PA1	J (CMOS/H)	General-purpose I/O ports.
		OUT2,OUT3		Output compare event output pins.
78,79	76,77	PA2,PA3	J (CMOS/H)	General-purpose I/O ports.
80	78	PA4	J (CMOS/H)	General-purpose I/O port.
		CKOT		Serves as the CKOT output while the CKOT is operating.
34	32	AV _{CC}	—	A/D converter power-supply pin.
35	33	AVRH	—	A/D converter external reference voltage source pin.
36	34	AVRL	—	A/D converter external reference voltage source pin.
37	35	AV _{SS}	—	A/D converter power-supply pin.
49,50	47,48	MD0,MD1	C	Operation mode setting input pins. Connect these pins directly to V _{CC} or V _{SS} .
51	49	MD2	K	Operation mode setting input pin. Connect this pin directly to V _{CC} or V _{SS} . (MB90552A/552B/553A/553B/V550A)
			C	Operation mode setting input pin. Connect this pin directly to V _{CC} or V _{SS} . (MB90P553A/F553A)
23,84	21,82	V _{CC}	—	Power (5 V) input pins.
11,42,81	9,40,79	V _{SS}	—	Power (0 V) input pins.

MB90550A/550B Series

■ HANDLING DEVICES

1. Preventing Latchup

CMOS ICs may cause latchup in the following situations:

- When a voltage higher than V_{CC} or lower than V_{SS} is applied to input or output pins.
- When a voltage exceeding the rating is applied between V_{CC} and V_{SS} .
- When AV_{CC} power is supplied prior to the V_{CC} voltage.

If latchup occurs, the power supply current increases rapidly, sometimes resulting in thermal breakdown of the device. Use meticulous care not to let it occur.

For the same reason, also be careful not to let the analog power-supply voltage exceed the digital power-supply voltage.

2. Handling unused input pins

Leaving unused input pins open may cause a malfunction or latch-up which leads to fatal damage to the device. Therefore they must be pulled up or pulled down through at least 2 k Ω resistance. Also, unused input/output pins should be left open in output state or handled in the same way as unused input pins.

3. Notes on Using External Clock

In using the external clock, drive X0 pin only and leave X1 pin open.

• Using external clock

4. Power Supply Pins (V_{CC}/V_{SS})

In products with multiple V_{CC} or V_{SS} pins, the pins of a same potential are internally connected in the device to avoid abnormal operations including latch-up. However, the pins should be connected to external power and ground lines to lower the electro-magnetic emission level and abnormal operation of strobe signals caused by the rise in the ground level, and to conform to the total current rating.

Make sure to connect V_{CC} and V_{SS} pins via lowest impedance to power lines.

It is recommended that a bypass capacitor of around 0.1 μF be placed between the V_{CC} and V_{SS} pins near the device.

• Using power supply pins

MB90550A/550B Series

5. Crystal Oscillator Circuit

Noise around X0 or X1 pins may cause abnormal operations. Make sure to provide bypass capacitors via shortest distance from X0, X1 pins, crystal oscillator (or ceramic resonator) and ground lines, and make sure that lines of oscillation circuit do not cross the lines of other circuits.

A printed circuit board artwork surrounding the X0 and X1 pins with grand area for stabilizing the operation is highly recommended.

6. Turning-on Sequence of Power Supply to A/D Converter and Analog Inputs

Make sure to turn on the A/D converter power supply (AV_{CC} , AV_{RH} , AV_{RL}) and analog inputs ($AN0$ to $AN7$) after turning-on the digital power supply (V_{CC}).

Turn-off the digital power after turning off the A/D converter supply and analog inputs. In this case, make sure that AV_{RH} does not exceed AV_{CC} (turning on/off the analog and digital power supplies simultaneously is acceptable).

7. Connection of Unused Pins of A/D Converter

Connect unused pin of A/D converter to $AV_{CC} = V_{CC}$, $AV_{SS} = AV_{RH} = AV_{RL} = V_{SS}$.

8. N.C. Pin

The N.C. (internally connected) pin must be opened for use.

9. Notes on Energization

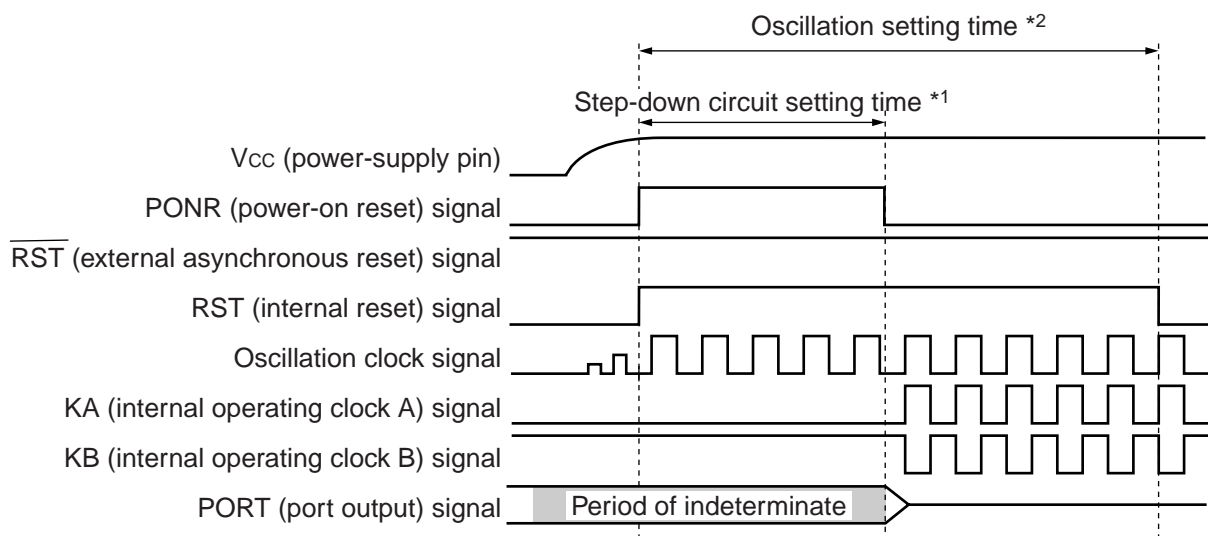

To prevent the internal regulator circuit from malfunctioning, set the voltage rise time during energization at 50 μ s or more.

10. Indeterminate outputs from ports 0 and 1

The outputs from ports 0 and 1 become indeterminate during oscillation setting time of step-down circuit (during a power-on reset) after the power is turned on. (MB90552A, MB90552B, MB90553A, MB90553B, MB90F553A, MB90V550A)

The series without built-in step-down circuit has no oscillation setting time of step-down circuit, so outputs should not become indeterminate. (MB90P553A)

Timing chart of indeterminate outputs from ports 0 and 1

*1: Step-down circuit setting time $2^{17}/\text{oscillation clock frequency}$ (oscillation clock frequency of 16 MHz: 8.19 ms)

*2: Oscillation setting time $2^{18}/\text{oscillation clock frequency}$ (oscillation clock frequency of 16 MHz: 16.38 ms)

11. Initialization

In the device, there are internal registers initialized only by a power-on reset. To initialize these registers, turn on the power again.

12. Return from standby state

If the power-supply voltage goes below the standby RAM holding voltage in the standby state, the device may fail to return from the standby state. In this case, reset the device via the external reset pin to return to the normal state.

13. Precautions for Use of “DIV A, Ri,” and “DIVW A, Ri” Instructions

The signed multiplication-division instructions “DIV A, Ri,” and “DIVW A, RWi” should be used when the corresponding bank registers (DTB, ADB, USB, SSB) are set to value “00_H.” If the corresponding bank registers (DTB, ADB, USB, SSB) are set to a value other than “00_H,” the remainder obtained after the execution of the instruction will not be placed in the instruction operand register.

14. Using of REALOS

The extended intelligent I/O service (EI²OS) cannot be used when using REALOS.

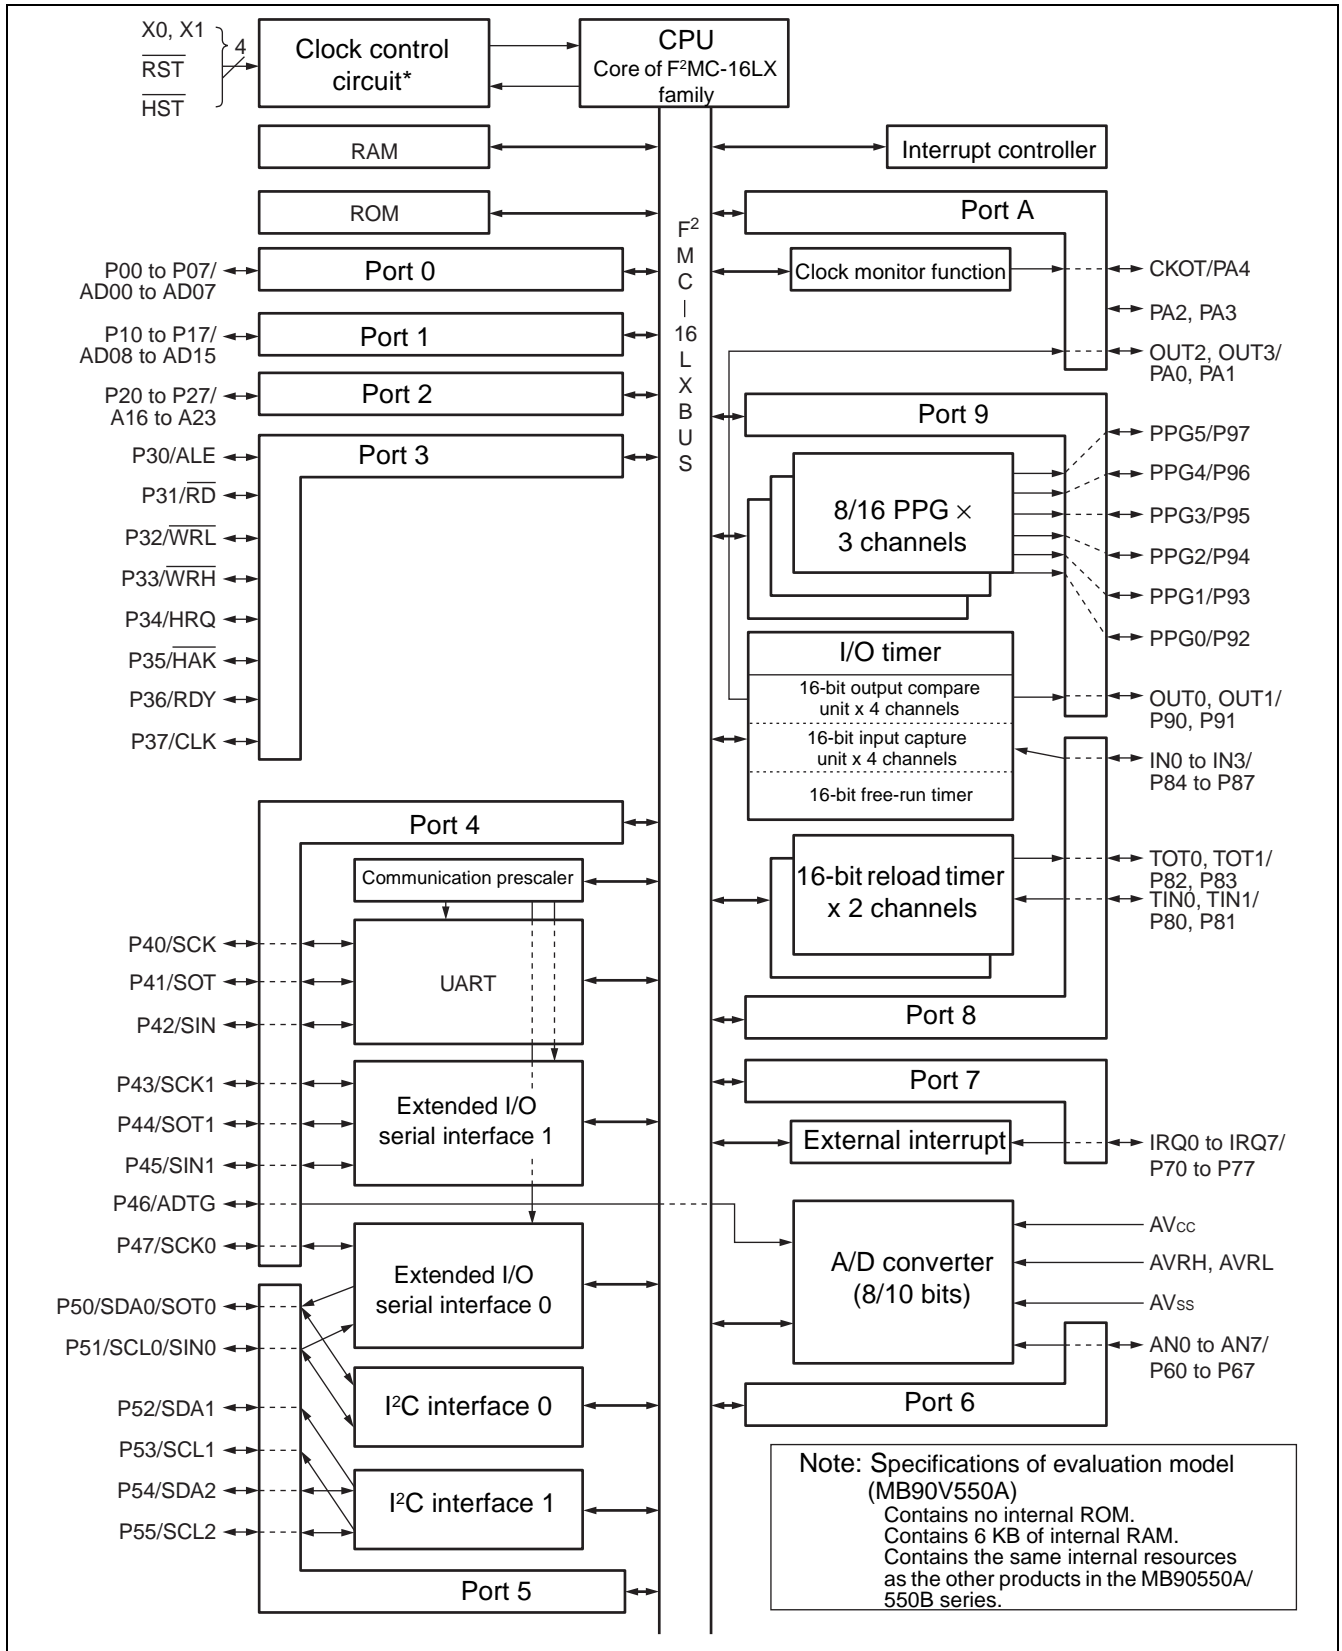

15. Caution on Operations during PLL Clock Mode

If the PLL clock mode is selected in the microcontroller, it may attempt to continue the operation using the free-running frequency of the self oscillation circuit in the PLL circuitry even if the oscillator is out of place or the clock input is stopped.

Performance of this operation, however, cannot be guaranteed.

MB90550A/550B Series

■ BLOCK DIAGRAM

MB90550A/550B Series

*: The clock control circuit contains a watchdog timer, time-base timer, and a low power consumption control circuit.

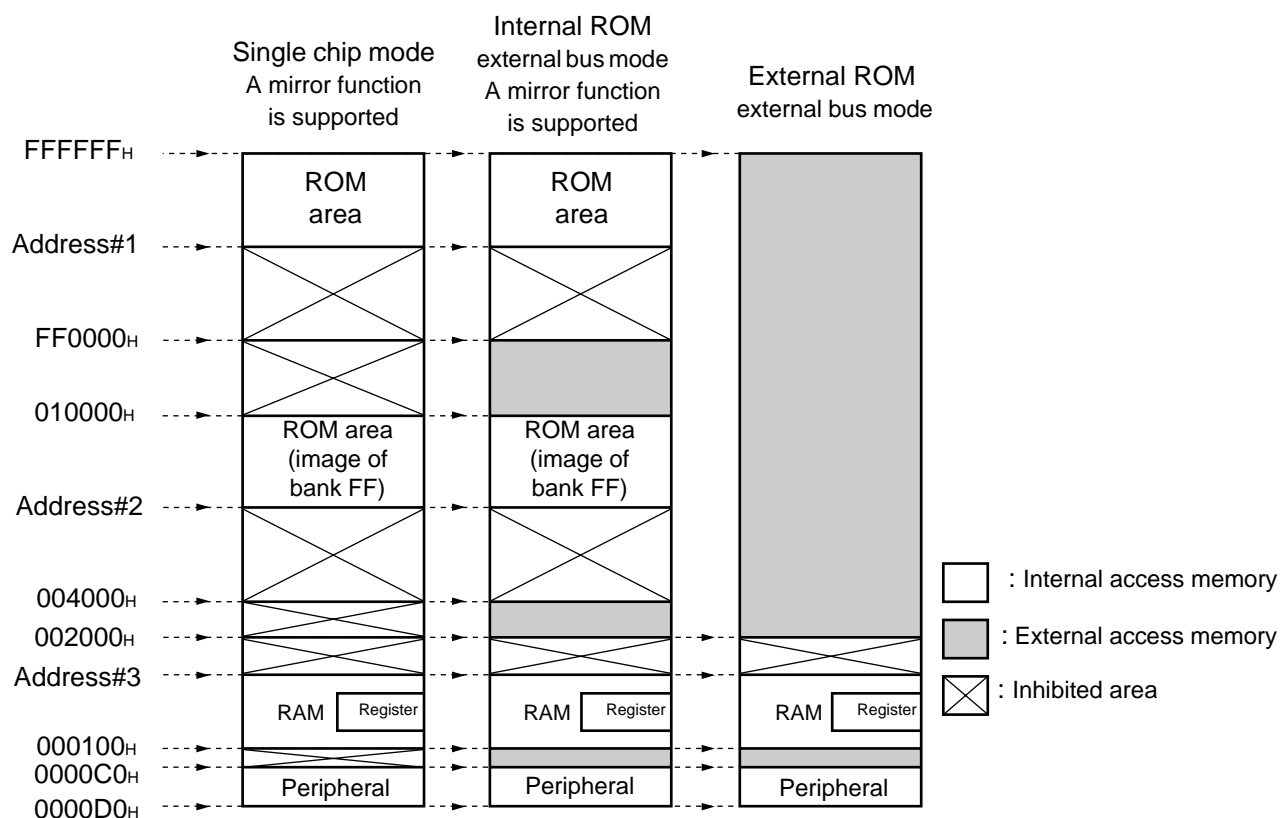

Note : P00 to P07 (8 pins): Input pull-up resistor setting register provided
P10 to P17 (8 pins): Input pull-up resistor setting register provided
P40 to P47 (8 pins): Open-drain control setting register provided
P50 to P55 (6 pins): N-channel open drain
Ports 0, 1, 2, 3, 4, 6, 7, 8, 9, and A are CMOS level input/output ports.

MB90550A/550B Series

■ MEMORY MAP

The ROM data of bank FF is reflected in the upper address of bank 00, realizing effective use of the C compiler small model. The lower 16-bit of bank FF and the lower 16-bit of bank 00 are assigned to the same address, enabling reference of the table on the ROM without stating "far".

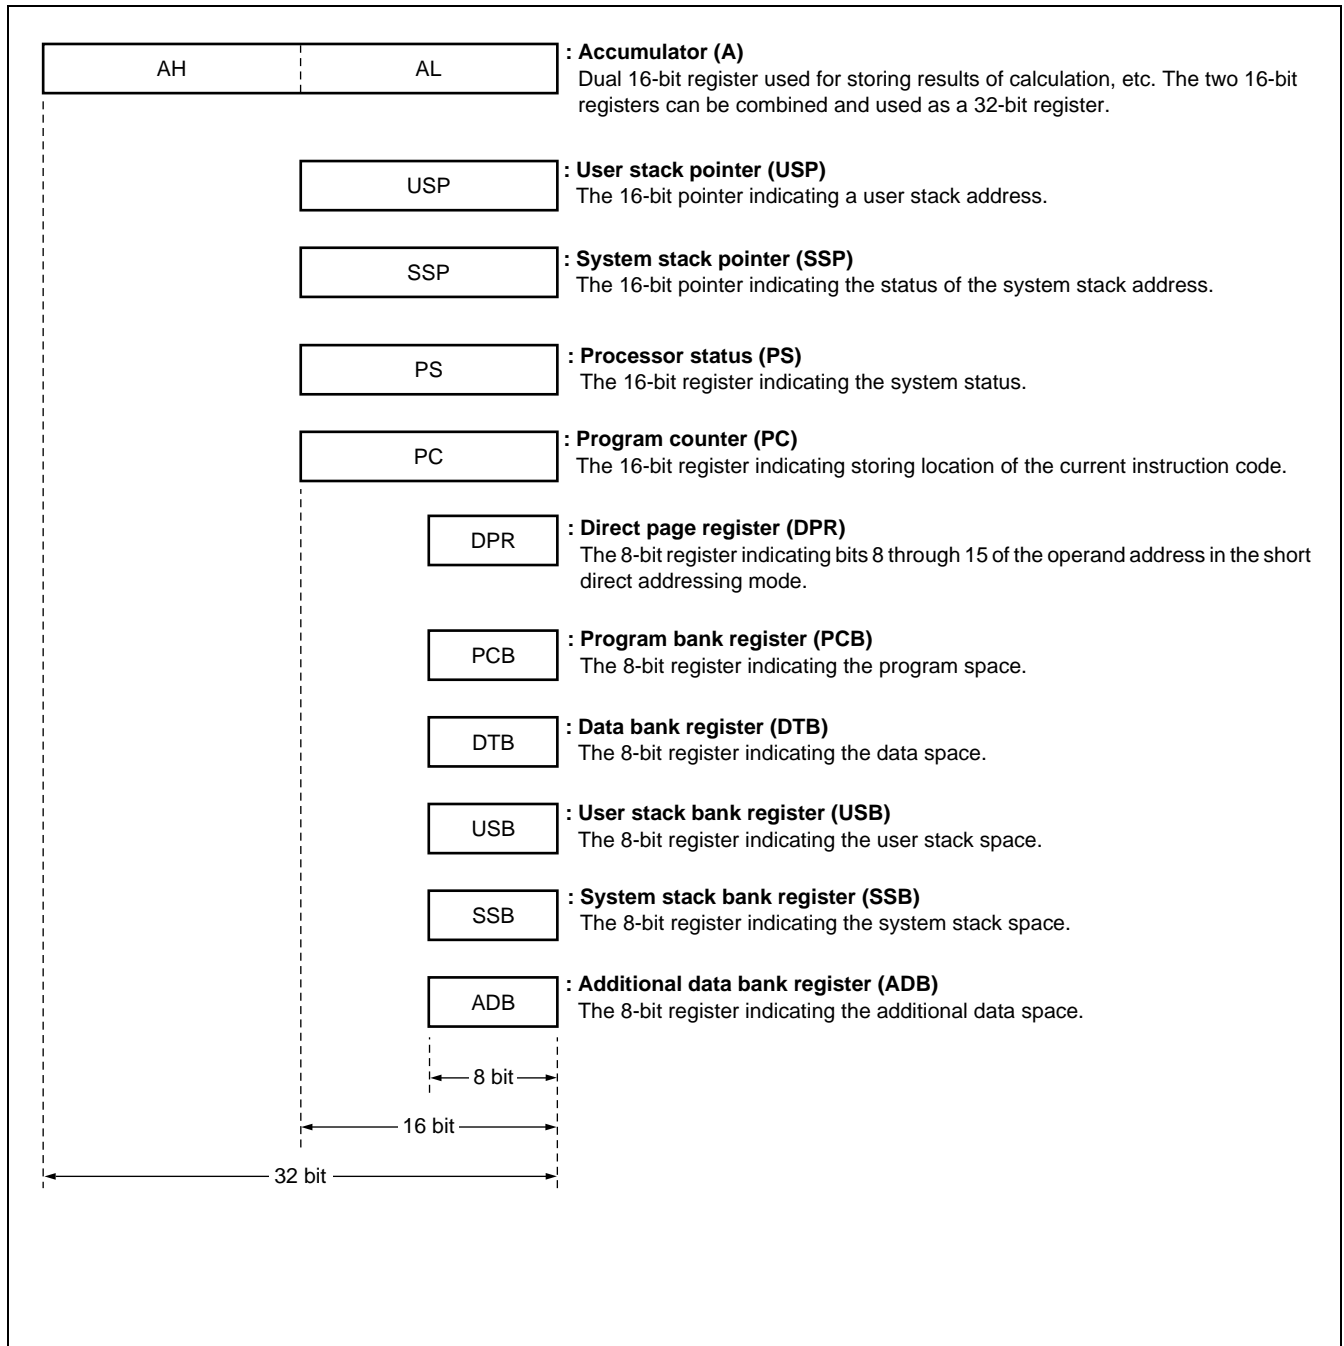

For example, if an attempt has been made to access 00C000_H, the contents of the ROM at FFC000_H are accessed. Since the ROM area of the FF bank exceeds 48 Kbytes, the whole area cannot be reflected in the image for the 00 bank. The ROM data at FF4000_H to FFFFFFF_H looks, therefore, as if it were the image for 004000_H to 00FFFF_H. Thus, it is recommended that the ROM data table be stored in the area of FF4000_H to FFFFFFF_H.

1FF6 _H to 1FFF _H	(Reserved area)				

- Initial value representations
 0: Initial value of 0
 1: Initial value of 1
 X: Initial value undefined
 _: Initial value undefined (none)
- Addresses that follow 00FF_H are the reserved areas.
- The boundary #_H between the RAM and reserved areas is different depending on each product.

Note : For writable bits, the initial value column contains the initial value to which the bit is initialized at a reset.

Notice that it is not the value read from the bit.

The LPMCR, CKSCR, and WDTC registers may be initialized or not initialized, depending on the type of the reset. Their initial values in the above list are those to which the registers are initialized.

“R/W!” in the access column indicates that the register contains read-only or write-only bits.

If a read-modify-write instruction (such as a bit setting instruction) is used to access a register marked “R/W!”, or “W” in the access column, the bit focused on by the instruction is set to the desired value but a malfunction occurs if the other bits contain a write-only bit. Do not use such instructions to access those registers.

◎ :The interrupt request flag is cleared by the EI²OS interrupt clear signal. The stop request is available.

○ :The interrupt request flag is cleared by the EI²OS interrupt clear signal.

×

MB90550A/550B Series

Note: On using the EI²OS Function with Extended I/O Serial Interface 2

If a resource has two interrupt sources for the same interrupt number, both of the interrupt request flags are cleared by the EI²OS interrupt clear signal. When the EI²OS function is used for one of the two interrupt sources, therefore, the other interrupt function cannot be used. Set the interrupt request enable bit for the relevant resource to "0" for software polling processing.

Interrupt source	Interrupt No.	Interrupt control register	Resource interrupt request
Extended I/O serial interface 1	# 23	ICR06	Enabled
16-bit free-run timer (I/O timer) overflow	# 24		Disabled

			180	mW	MB90552A/552B
Operating temperature	T_A	-40	+85	$^{\circ}\text{C}$	
Storage temperature	T_{STG}	-55	+150	$^{\circ}\text{C}$	

*1 : Care must be taken that AV_{CC} , $AVRH$, $AVRL$ do not exceed V_{CC} .

Also, care must be taken that $AVRH$ and $AVRL$ do not exceed AV_{CC} , and $AVRL$ does not exceed $AVRH$.

*2 : The maximum output current is a peak value for a corresponding pin.

*3 : Average output current is an average current value observed for a 100 ms period for a corresponding pin.

*4 : Total average current is an average current value observed for a 100 ms period for all corresponding pins.

*5 : V_I and V_O should not exceed $V_{CC} + 0.3\text{V}$.

*6 : • Applicable to pins : P00 to P07, P10 to P17, P20 to P27, P30 to P37, P40 to P47, P60 to P67, P70 to P77, P80 to P87, P90 to P97, PA0 to PA4

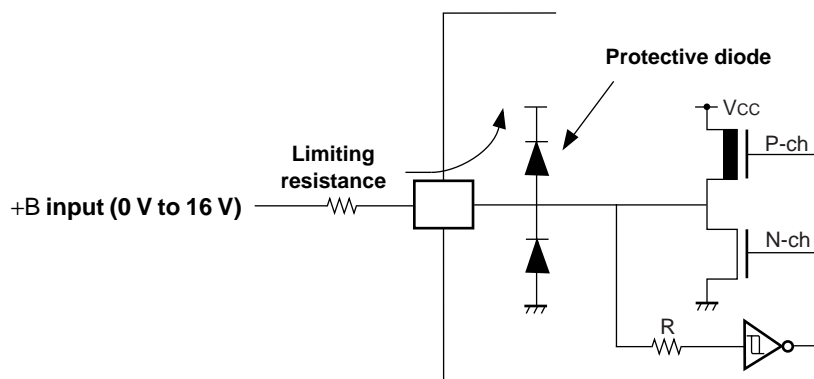

(Continued)

MB90550A/550B Series

(Continued)

- Use within recommended operating conditions.
- Use at DC voltage (current) .
- The +B signal should always be applied with a limiting resistance placed between the +B signal and the microcontroller.
- Set the value of the limiting resistance as the current to be input to the microcontroller at +B input is below the rated value, either instantaneously or for the prolonged periods.
- Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the V_{CC} pin, and this may affect other devices.
- Note that if a +B signal is input when the microcontroller current is off (not fixed at 0 V) , the power supply is provided from the pins, so that incomplete operation may result.
- Note that is the +B input is applied during power-on, the power supply is provided from the pins and resulting supply voltage may not be sufficient to operate the power-on reset.
- Care must be taken not to leave the +B input pin open.
- Note that analog system input/output pins other than the A/D input pins (LCD drive pins, comparator input pins, etc.) cannot accept +B signal input.
- Sample recommended circuits :

- Input/output equivalent circuits

Note: Average output current = operating current × operating efficiency

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

MB90550A/550B Series

2. Recommended Operating Conditions

($V_{SS} = AV_{SS} = 0.0\text{ V}$)

Parameter	Symbol	Value		Unit	Remarks
		Min	Max		
Power supply voltage	V_{CC} AV_{CC}	4.5	5.5	V	Normal operation (MB90F553A, MB90P553A, MB90V550A)
		3.5	5.5	V	Normal operation (MB90553A, MB90553B, MB90552A, MB90552B)
		3.5	5.5	V	Retains status at the time of operation stop
Smoothing capacitor	C_S	0.1	1.0	μF	*
Operating temperature	T_A	-40	+85	$^{\circ}\text{C}$	

* : Use a ceramic capacitor or a capacitor with equivalent frequency characteristics. The smoothing capacitor to be connected to the V_{CC} pin must have a capacitance value higher than C_S .
For connecting smoothing capacitor C_S , see the diagram below:

• C pin connection circuit

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their representatives beforehand.

*2 : X0, $\overline{\text{HST}}$, $\overline{\text{RST}}$, P40 to P47, P50 to P55, P60 to P67, P70 to P77, P80 to P87, P90 to P97, PA0 to PA4

*3 : MD0, MD1 and MD2

*4 : The current value is preliminary value and may be subject to change for enhanced characteristics without previous notice. The power supply current is measured with an external clock.

MB90550A/550B Series

4. AC Characteristics

(1) Clock Timing

($V_{CC} = 5.0 \text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0 \text{ V}$, $T_A = -40 \text{ }^\circ\text{C}$ to $+85 \text{ }^\circ\text{C}$)

Parameter	Symbol	Pin name	Value			Unit	Unit
			Min	Typ	Max		
Oscillation clock frequency	F_C	X0, X1	3	—	16	MHz	
Oscillation clock cycle time	t_c	X0, X1	62.5	—	333	ns	
Frequency fluctuation rate locked*	Δf	—	—	—	5	%	
Input clock pulse width	P_{WH} P_{WL}	X0	10	—	—	ns	Recommended duty ratio of 40% to 60%
Input clock rising/falling time	t_{CR} , t_{CF}	X0	—	—	5	ns	External clock operation
Internal operating clock frequency	F_{CP}	—	8.0	—	16	MHz	PLL operation
			1.5	—	16	MHz	Main clock operation
Internal operating clock cycle time	t_{CP}	—	62.5	—	125	ns	PLL operation
			62.5	—	666	ns	Main clock operation

* : The frequency fluctuation rate is the maximum deviation rate of the preset center frequency when the multiplied PLL signal is locked.

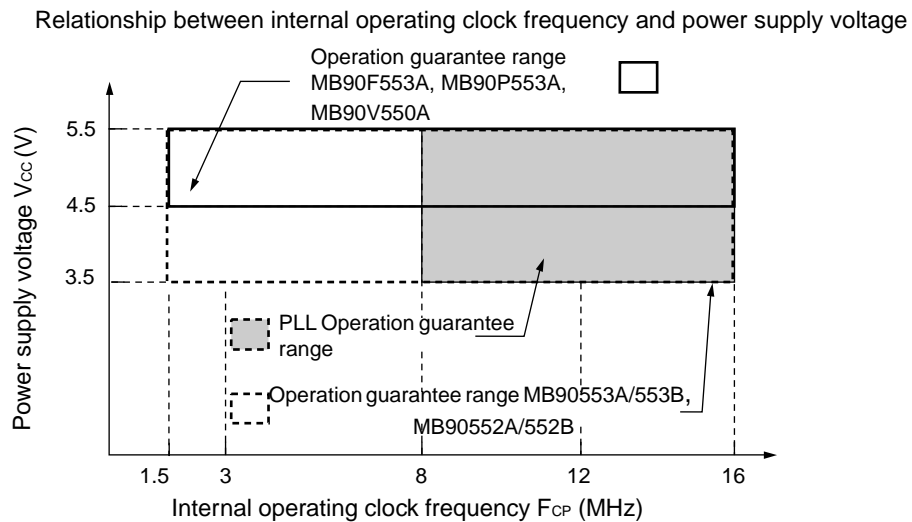

• X0, X1 clock timing

MB90550A/550B Series

• PLL operation guarantee range

Relationship between oscillation clock frequency and internal operating clock frequency

The AC ratings are measured for the following measurement reference voltages.

• Input signal waveform

Hysteresis input pin

Pins other than hysteresis input / MD input

• Output signal waveform

Output pin

MB90550A/550B Series

(2) Clock Output Timing

($V_{CC} = 5.0 \text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0 \text{ V}$, $T_A = -40 \text{ }^{\circ}\text{C}$ to $+85 \text{ }^{\circ}\text{C}$)

Parameter	Symbol	Pin name	Value		Unit	Remarks
			Min	Max		
Cycle time	t_{CYC}	CLK	62.5	—	ns	
CLK $\uparrow \rightarrow$ CLK \downarrow time	t_{CHCL}		$t_{CP}/2 - 20$	$t_{CP}/2 + 20$	ns	

MB90550A/550B Series

(3) Reset, Hardware Standby Input Timing

($V_{CC} = 5.0 \text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0 \text{ V}$, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$)

Parameter	Symbol	Pin name	Value		Unit	Remarks
			Min	Max		
Reset input time	t_{RSTL}	\overline{RST}	16 t_{CP}	—	ns	Under normal operation
			Oscillation time of oscillator* + 16 t_{CP}	—	ms	In stop mode
Hardware standby input time	t_{HSTL}	\overline{HST}	16 t_{CP}	—	ns	Under normal operation

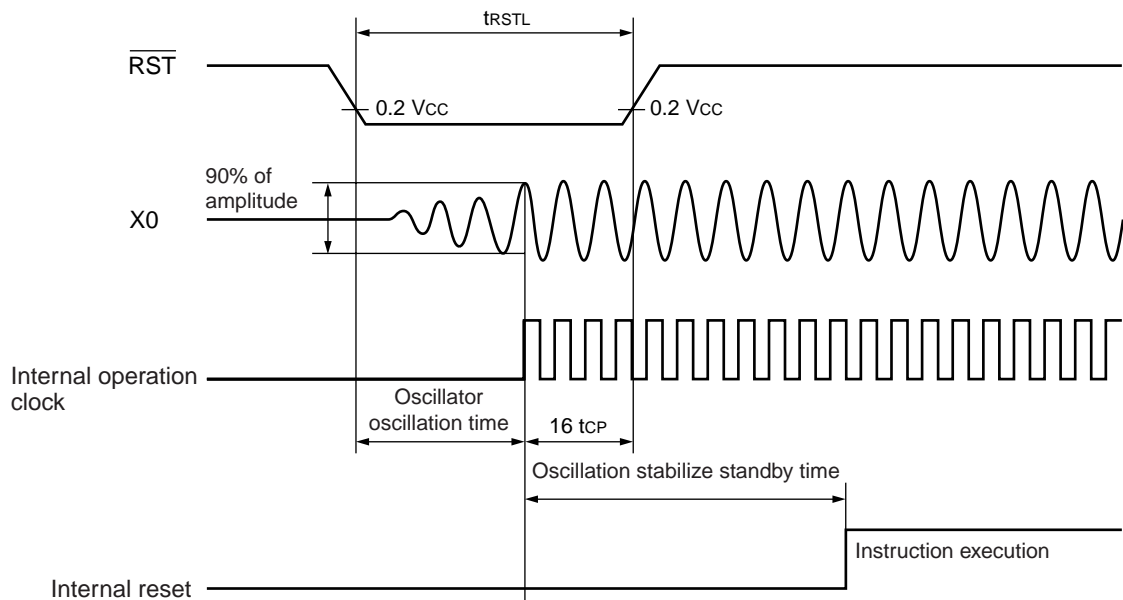

* : Oscillation time of oscillator is time that the amplitude reached the 90 %.

In the crystal oscillator, the oscillation time is between several ms to tens of ms. In ceramic oscillator, the oscillation time is between hundreds of μs to several ms. In the external clock, the oscillation time is 0 ms.

• Under normal operation

• In stop mode

MB90550A/550B Series

(4) Specification for Power-on Reset

($V_{CC} = 5.0 \text{ V} \pm 10 \%$, $V_{SS} = AV_{SS} = 0.0 \text{ V}$, $T_A = -40 \text{ }^{\circ}\text{C}$ to $+85 \text{ }^{\circ}\text{C}$)

Parameter	Symbol	Pin name	Value		Unit	Remarks
			Min	Max		
Power supply rising time	t_R	V_{CC}	0.05	30	ms	
Power-supply start voltage	V_{OFF}		—	0.2	V	
Power-supply end voltage	V_{ON}		2.7	—	V	
Power supply cut-off time	t_{OFF}		4	—	ms	Due to repeated operations

- Notes:
- V_{CC} must be kept lower than 0.2 V before power-on.
 - The above values are used for creating a power-on reset.
 - Some registers in the device are initialized only upon a power-on reset. To initialize these register, turn on the power supply using the above values.

Sudden changes in the power supply voltage may cause a power-on reset.

To change the power supply voltage while the device is in operation, it is recommended to raise the voltage smoothly to suppress fluctuations as shown below.

In this case, change the supply voltage with the PLL clock not used. If the voltage drop is 1 V or fewer per second, however, you can use the PLL clock.

MB90550A/550B Series

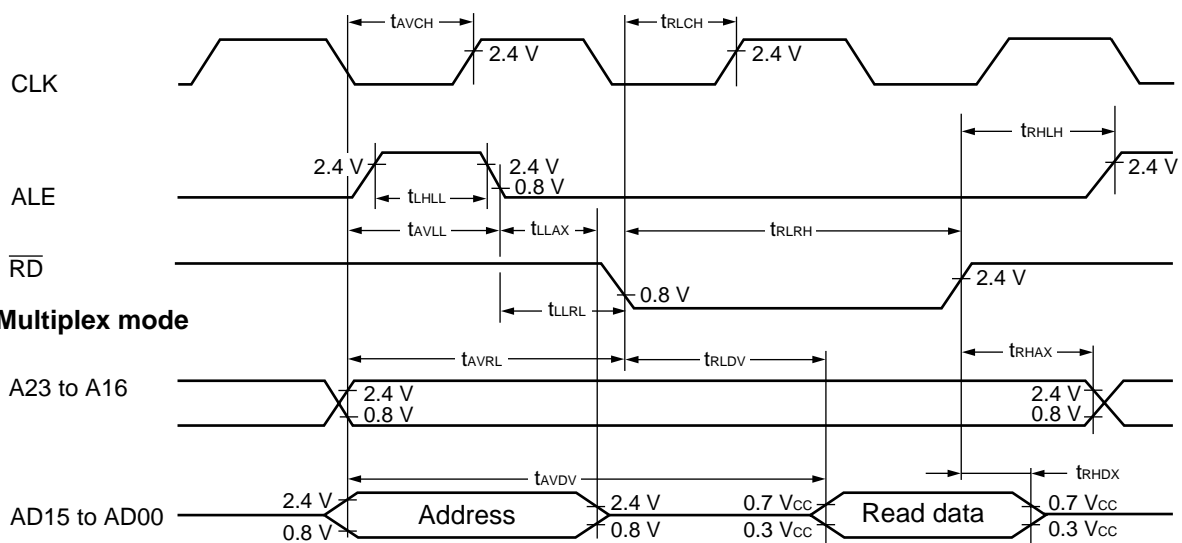

(5) Bus Read Timing

($V_{CC} = 5.0 \text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0 \text{ V}$, $T_A = -40^\circ \text{C}$ to $+85^\circ \text{C}$)

Parameter	Symbol	Pin name	Value		Unit	Remarks
			Min	Max

Offset between channels	—	AN0 to AN7	—	—	4	LSB	

*1: When F_{CP} = 8 MHz, t_{CMP} = 176 × t_{CP}. When F_{CP} = 16 MHz, t_{CMP} = 352 × t_{CP}.

*2: Equivalent to the time for conversion per channel if “t_{SMP} = 64 × t_{CP}” or “t_{CMP} = 352 × t_{CP}” is selected when F_{CP} = 16 MHz.

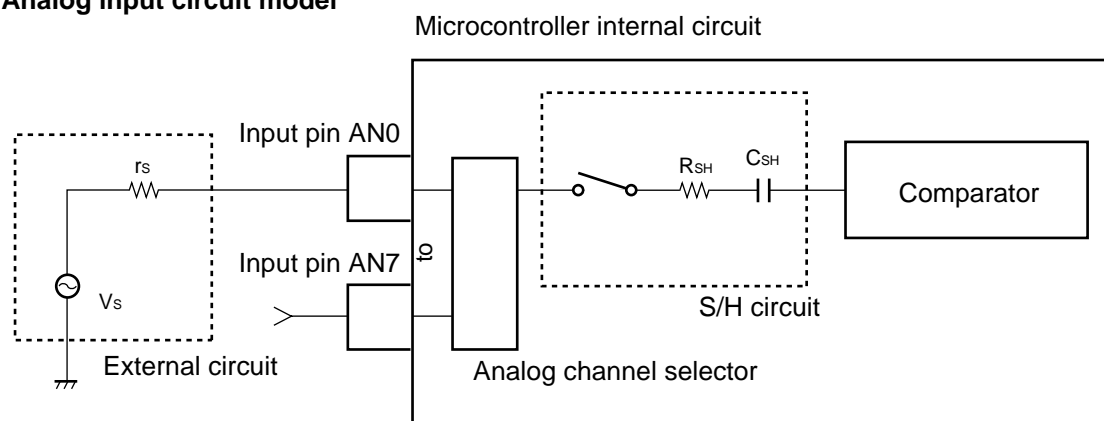

*3: Specifies the power-supply current (V_{CC} = AV_{CC} = AVR_H = 5.0 V) when the A/D converter is inactive and the CPU has been stopped.

Notes: • The error becomes larger relatively as |AVR_H–AVR_L| becomes smaller.

- Use the output impedance r_s of the external circuit for analog input under the following condition:
External circuit output impedance r_s = 10 kΩ Max.
- If the output impedance of the external circuit is too high, the analog voltage sampling time may be insufficient.
- If you insert a DC-blocking capacitor between the external circuit and the input pin, select a capacitance that is about several thousands times the sampling capacitance C_{SH} in the chip to suppress the effect of capacity potential division with C_{SH}.

MB90550A/550B Series

• Analog input circuit model

<Recommended/reference values for device parameters>

$r_s = 10 \text{ k}\Omega$ or less

$R_{SH} = \text{About } 3 \text{ k}\Omega$

$C_{SH} = \text{About } 25 \text{ pF}$

Note: Device parameter values are provided as reference values for design purposes; they are not guaranteed.

MB90550A/550B Series

(2) Definitions of Terms

- Resolution: Analog transition identifiable by the A/D converter.
Analog voltage can be divided into 1024 (2^{10}) components at 10-bit resolution.
- Total error: Difference between actual and logical values. This error is the sum of an offset error, gain error, non-linearity error and an error caused by noise.
- Linearity error: Deviation of the straight line drawn between the zero transition point (00 0000 0000 <-> 00 0000 0001) and the full-scale transition point (11 1111 1110 <-> 11 1111 1111) of the device from actual conversion characteristics
- Differential linearity error: Deviation from the ideal input voltage required to shift output code by one LSB

• 10-bit A/D converter conversion characteristics

$$1LSB = \frac{V_{FST} - V_{OT}}{1022}$$

$$\text{Linearity error} = \frac{V_{NT} - (1LSB \times N + V_{OT})}{1LSB} \quad [LSB]$$

$$\text{Differential linearity error} = \frac{V_{(N+1)T} - V_{NT}}{1LSB} - 1 \quad [LSB]$$

■ PACKAGE DIMENSIONS

 <p>100-pin plastic LQFP</p> <p>(FPT-100P-M20)</p>	Lead pitch	0.50 mm
	Package width × package length	14.0 mm × 14.0 mm
	Lead shape	Gullwing
	Sealing method	Plastic mold
	Mounting height	1.70 mm Max
	Weight	0.65 g
	Code (Reference)	P-LFQFP100-14×14-0.50

Please confirm the latest Package dimension by following URL.

The contents of this document are subject to change without notice.

Customers are advised to consult with sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of FUJITSU MICROELECTRONICS device; FUJITSU MICROELECTRONICS does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information.

FUJITSU MICROELECTRONICS assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of FUJITSU MICROELECTRONICS or any third party or does FUJITSU MICROELECTRONICS warrant non-infringement of any third-party's intellectual property right or other right by using such information. FUJITSU MICROELECTRONICS assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that FUJITSU MICROELECTRONICS will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

Exportation/release of any products described in this document may require necessary procedures in accordance with the regulations of the Foreign Exchange and Foreign Trade Control Law of Japan and/or US export control laws.

The company names and brand names herein are the trademarks or registered trademarks of their respective owners.
