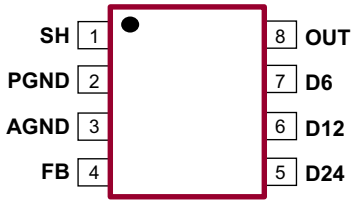
## Ordering Information

| Part Number | Package Option | Packing |
|---|---|---|
| SR10LG-G | 8-Lead SOIC | 2500/Reel |

*-G indicates package is RoHS compliant ('Green')*

## Pin Configuration



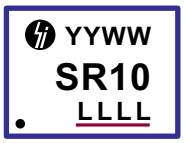
**8-Lead SOIC**
*(top view)*

## Absolute Maximum Ratings

| Parameter | Value |
|---|---|
| $V_{OUT}$, $V_{SH}$ | 40V |
| $V_{FB}$ | 5.0V |
| PGND – AGND | ±300mV |
| $I_{IN(RMS)}$ (SH to PGND) | 300mARMS |
| $I_{DSH}$ (PGND to SH) | 300mA |
| Operating junction temperature | -40°C to +125°C |

*Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.*

## Product Marking



YY = Year Sealed
WW = Week Sealed
L = Lot Number
_____ = "Green" Packaging

*Package may or may not include the following marks: Si or*

**8-Lead SOIC**

## Typical Thermal Resistance

| Package | $\theta_{ja}$ |
|---|---|
| 8-Lead SOIC | 101°C/W* |

## Recommended Operating Conditions

| Sym | Parameter | Min | Typ | Max | Units | Conditions |

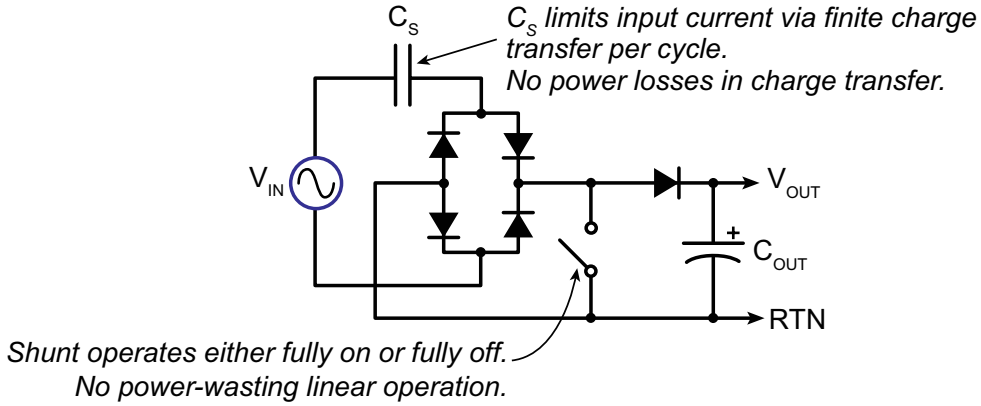
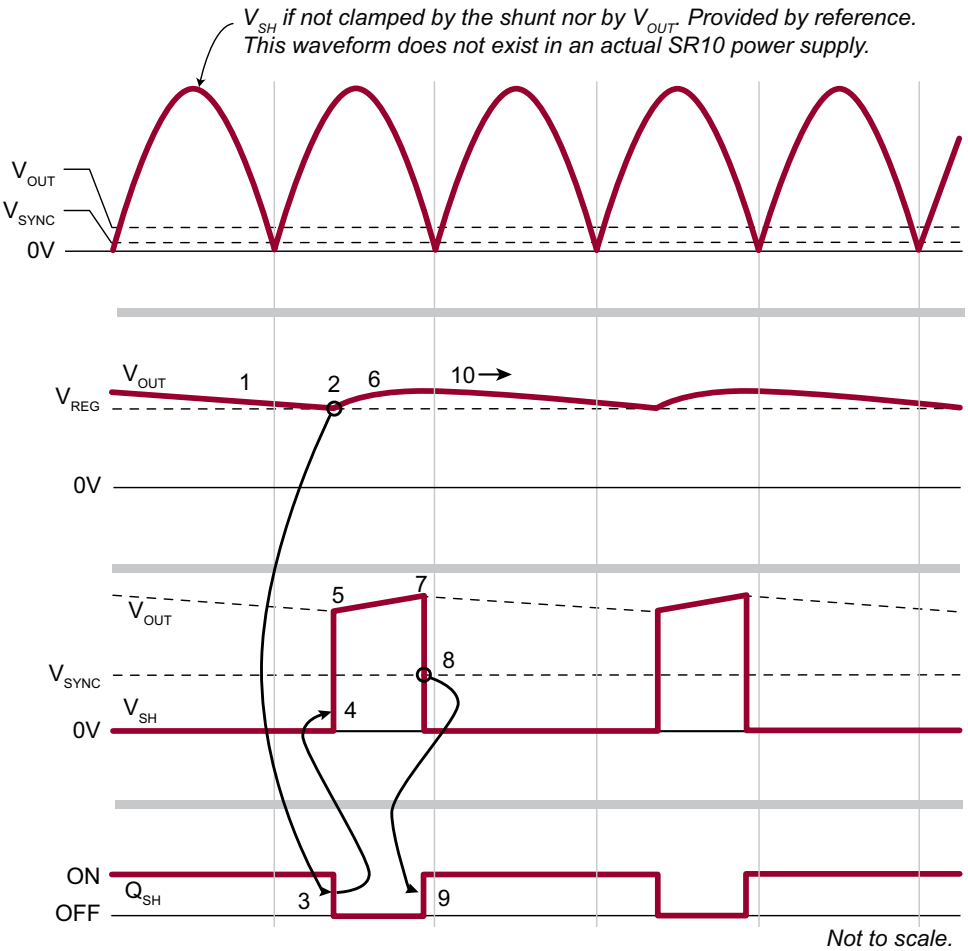
## Application Information

The SR10 is a capacitor-coupled, switched shunt regulator. Capacitor-coupling to the AC line limits input current due to the finite charge per cycle that can be transferred. Contrasting with a traditional Zener shunt, the switched shunt operates either fully on or fully off, resulting in low standby power consumption.

## Simplified Schematic



## Timing



1. *Output voltage decays under load until ...*
2. *it hits the regulation point which...*
3. *turns off the shunt...*
4. *freeing $V_{SH}$ to rise...*
5. *until it is clamped by $V_{OUT}$ where...*
6. *Input current flows to the output, causing $V_{OUT}$ to rise...*
7. *until $V_{SH}$ falls below $V_{OUT}$.*
8. *When it reaches $V_{SYNC}$...*
9. *the shunt is turned on and current no longer flows to the output.*
10. *The cycle repeats.*

## Output Current Capability

Output current capability is largely a function of capacitor $C_S$ and the input voltage. The following table provides approximate current capability for various $C_S$ values and line voltages. Actual current will be less due to losses. Higher output voltages slightly reduce output current capability.

### $C_S$ Table

The following table is based on the previously provided equations for $C_S$. Actual output current may be less due to losses (~5% less). AC line voltage is assumed to be 90 - 135VRMS @ 60Hz or 190 - 275VRMS @ 50Hz. Slashed cells exceed recommended operating conditions for peak shunt current at 85°C.

For universal 120V and 240V operation choose $C_S$ based on 120VAC and make sure that operation at 240VAC does not fall in a slashed cell. The relevant cells are adjacent to each other. For example, if 50mA at 12V is needed and full rectification used, a $C_S$ capacitor of 2.2µF ± 10% provides 53.8mA at 120VAC (90VAC low line). But at 240VAC, the cell to the right (240VAC column) is slashed, and universal operation is not possible. This assumes 120VAC low line is 90VAC and 240VAC high line is 275VAC. For other high/low voltages use the equations.

### Output current capability (mA)

| $C_S$ | $C_S$ Tol | 6V Output | | | | 12V Output | | | | 24V Output | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Half | | Full | | Half | | Full | | Half | | Full | |
| | | 120V 60Hz | 240V 50Hz | 120V 60Hz | 240V 50Hz | 120V 60Hz | 240V 50Hz | 120V 60Hz | 240V 50Hz | 120V 60Hz | 240V 50Hz | 120V 60Hz | 240V 50Hz |

= *Exceeds Recommended Operating Limits*

## Output Voltage

The output voltage may be adjusted over the range of 6V to 28V using either the SR10's internal feedback divider or by using an external divider. The internal divider has taps for 6V, 12V, and 24V which are brought out to pins D6, D12, and D24 respectively. Connecting the appropriate tap to the feedback pin (FB) provides the chosen output voltage.

If an output voltage other than that provided by the internal divider is required, an external feedback divider from $V_{OUT}$ to the FB pin may be used. The range is from 6V to 28V.

| FB pin connected to... | Output Voltage |
|---|---|
| D6 | 6V |
| D12 | 12V |
| D24 | 24V |
| External divider | $V_{OUT} = 1.2V \left(1 + \frac{R_{FB1}}{R_{FB2}}\right)$ |

***Note:***
*A 470pF capacitor from FB pin to AGND pin minimizes the effects of a noisy AC line.*

## Pin Description

| Name | Pin | Description |
|---|---|---|
| SH | 1 | Shunt |
| PGND | 2 | Power ground for the shunt |
| AGND | 3 | Analog ground for the controller |
| FB | 4 | Feedback input |
| D24 | 5 | Internal feedback divider 24V tap |
| D12 | 6 | Internal feedback divider 12V tap |
| D6 | 7 | Internal feedback divider 6.0V tap |
| OUT | 8 | Connect to regulator output |

***Note:***
*All pins are low voltage.*

## Additional Information

For a more detailed description or for sample circuits, an application note and a demo board are available.

**AH-H65** **CCSS Application Note**
- Explains the operating principle of the capacitor-coupled, switched shunt regulator
- Provides design equations and guidelines
- Specifies special testing considerations

**SR10DB1** **SR10 Demo Board**
- Jumper-selectable half-wave or full-wave recitfication
- Jumper-selectable output voltage
- Socketed components allow easy optimization
