Erase Characteristics

Wavelengths of light less than 4000 angstroms begin to erase the devices in the windowed package. For this reason, an opaque label should be placed over the window if the PROM is exposed to sunlight or fluorescent lighting for extended periods of time.

The recommended dose of ultraviolet light for erasure is a wavelength of 2537 angstroms for a minimum dose (UV intensity multiplied by exposure time) of 25 Wsec/cm². For an ultraviolet lamp with a 12 mW/cm² power rating, the exposure time would be approximately 35 minutes. The 7C261 or 7C263 needs to be within 1 inch of the lamp during erasure. Permanent damage may result if the PROM is exposed to high-intensity UV light for an extended period of time. 7258 Wsec/cm² is the recommended maximum dosage.

Operating Modes

Read

Read is the normal operating mode for programmed device. In this mode, all signals are normal TTL levels. The PROM is addressed with a 13-bit field, a chip select, (active LOW), is applied to the CS pin, and the contents of the addressed location appear on the data out pins.

Program, Program Inhibit, Program Verify

These modes are entered by placing a high voltage V_{PP} on pin 19, with pins 18 and 20 set to V_{ILP} . In this state, pin 21 becomes a latch signal, allowing the upper 5 address bits to be latched into an onboard register, pin 22 becomes an active LOW program (PGM) signal and pin 23 becomes an active LOW verify (VFY) signal. Pins 22 and 23 should never be active LOW at the same time. The PROGRAM mode exists when PGM is LOW, and VFY is HIGH. The verify mode exists when the reverse is true, PGM HIGH and VFY LOW and the program inhibit mode is entered with both PGM and VFY HIGH. Program inhibit is specifically provided to allow data to be placed on and removed from the data pins without conflict

Table 1. Mode Selection

Mode		Pin Function ^[6, 7]						
		Read or Output Disable	A ₁₂	A ₁₁	A ₁₀	A ₉	A ₈	CS
	Program	NA	V _{PP}	LATCH	PGM	VFY	CS	D ₇ -D ₀

Output Disable		A ₁₂	A ₁₁	A ₁₀	A ₉	A ₈	V _{IH}	High Z

Program Inhibit		V _{ILP}	V _{PP}	V _{ILP}	V _{IHP}	V _{IHP}	V _{ILP}	High Z
Program Verify		V _{ILP}	V _{PP}	V _{ILP}	V _{IHP}	V _{ILP}	V _{ILP}	O ₇ -O ₀
Blank Check		V _{ILP}	V _{PP}	V _{ILP}	V _{IHP}	V _{ILP}	V _{ILP}	O ₇ -O ₀

Notes:

6. X = "don't care" but not to exceed $V_{CC} \pm 5\%$.
7. Addresses A₈-A₁₂ must be latched through lines A₀-A₄ in programming modes.
