Downloaded from Arrow.com.

<sup>\*1:</sup>The ray receiving surface at a vertex and relation to the ray axis in the range of  $\theta$ = 0° and  $\theta$ =45°.

<sup>\*2:</sup>A range from 30cm to the arrival distance. Average value of 50 pulses.

**IRM-8602S** 

#### **Test Method:**

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

#### ①Measurement place

A place that is nothing of extreme light reflected in the room.

#### ②External light

Project the light of ordinary white fluorescent lamps which are not high Frequency lamps and must be less then 10 Lux at the module surface. (Ee  $\leq$  10Lux)

#### ③Standard transmitter

A transmitter whose output is so adjusted as to **Vo=400mVp-p** and the output Wave form shown in Fig.-1.According to the measurement method shown in Fig.-2 the standard transmitter is specified.

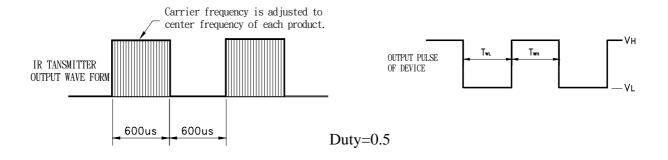

However , the infrared photodiode to be used for the transmitter should be  $\lambda p=940$ nm,  $\Delta\lambda=50$ nm. Also, photodiode is used of PD438B(Vr=5V). (Standard light / Light source temperature 2856°K).

#### Measuring system

According to the measuring system shown in Fig.-3
