

500mA Low-Noise LDO Voltage Regulator

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

V_{IN} , EN -20V to +20V
 Storage Temperature -65°C to 150°C
 Junction Temperature 150°C
 Power Dissipation Internally Limited
 Lead Temperature (Soldering, 5 sec) 260°C
 ESD Rating (HBM - Human Body Model) 1kV

OPERATING RATINGS

Input Voltage Range V_{IN} 2.5V to 16V
 Enable Pin EN 0.0V to V_{IN}
 Junction Temperature Range -40°C to +125°C
 Thermal Resistance¹
 θ_{JA} (SOT23-5) 191°C/W
 θ_{JA} (NSOIC-8) 128.4°C/W
 θ_{JA} (DFN-8) 59°C/W

Note 1: The maximum allowable power dissipation is a function of maximum operating junction temperature, $T_{J(max)}$, the junction to ambient thermal resistance, and the ambient θ_{JA} , and the ambient temperature T_A . The maximum allowable power dissipation at any ambient temperature is given: $P_{D(max)} = (T_{J(max)} - T_A) / \theta_{JA}$, exceeding the maximum allowable power limit will result in excessive die temperature; thus, the regulator will go into thermal shutdown.

ELECTRICAL SPECIFICATIONS

Specifications with standard type are for an Operating Junction Temperature of $T_J = 25^\circ\text{C}$ only; limits applying over the full Operating Junction Temperature range are denoted by a "•". Minimum and Maximum limits are guaranteed through test, design, or statistical correlation. Typical values represent the most likely parametric norm at $T_J = 25^\circ\text{C}$, and are provided for reference purposes only. Unless otherwise indicated, $V_{IN} = V_{OUT} + 1\text{V}$ ($V_{IN} = V_{OUT} + 1.2\text{V}$ for 1.2V option), $I_L = 100\mu\text{A}$, $C_L = 1\mu\text{F}$, $V_{EN} \geq 2.5\text{V}$, $T_A = T_J = 25^\circ\text{C}$.

Parameter	Min.	Typ.	Max.	Units	Conditions
Output Voltage Tolerance	-1		+1	%	
	-2		+2		•
Output Voltage Temperature Coefficient		57		ppm/°C	
Line Regulation		0.04	0.1	%/V	$V_{IN} = V_{OUT} + 1$ to 16V and $V_{EN} \leq 6\text{V}$
			0.2		• $V_{IN} = V_{EN} = V_{OUT} + 1 \leq 8\text{V}$
			0.2		$V_{IN} = V_{EN} = V_{OUT} + 1 \leq 16\text{V}$ $T_A = 25^\circ\text{C}$ to 85°C
Load Regulation		0.05	0.4	%	$I_L = 0.1\text{mA}$ to 500mA
Dropout Voltage ($V_{IN} - V_{OUT}$) ²		10	60	mV	$I_L = 100\mu\text{A}$
			80		•

PIN DESCRIPTION

Name	Pin # nSOIC	Pin # DFN	Pin # SOT-23	Description
V_{IN}	2	3	1	Supply Input
GND	5, 6, 7, 8	7	2	Ground
V_{OUT}	3	5	5	Regulator Output
EN	1	1	3	Enable(input). CMOS compatible control input. Logic high – enable; logic low or open = shutdown
ADJ	4	8	4	Adjustable part only. Feedback input. Connect to resistive voltage-divider network
BYP				Fixed version only. Internal reference bypass pin. Connect 10nF to ground to reduce thermal noise on the output.
NC	-	2, 4, 6	-	No Connect

APPLICATION INFORMATION

The SPX3819 requires an output capacitor for device stability. Its value depends upon the application circuit. In general, linear regulator stability decreases with higher output currents. In applications where the SPX3819 is sourcing less current, a lower output capacitance may be sufficient. For example, a regulator outputting only 10mA, requires approximately half the capacitance as the same regulator sourcing 150mA.

Bench testing is the best method for determining the proper type and value of the capacitor since the high frequency characteristics of electrolytic capacitors vary widely, depending on type and manufacturer. A high quality 2.2 μF aluminum electrolytic

capacitor works in most application circuits, but the same stability often can be obtained with a 1 μF tantalum electrolytic.

With the SPX3819 adjustable version, the minimum value of output capacitance is a function of the output voltage. The value decreases with higher output voltages, since closed loop gain is increased.

TYPICAL APPLICATIONS CIRCUITS

For fixed voltage options only. A 10nF capacitor on the BYP pin will significantly reduce output noise, but it may be left unconnected if the output noise is not a major concern. The SPX3819 start-up speed is inversely proportional to the size of the BYP capacitor.

500mA Low-Noise LDO Voltage Regulator

Applications requiring a slow rampup of the output voltage should use a larger CBYP. However, if a rapid turn-on is necessary, the BYP capacitor can be omitted.

The SPX3819's internal reference is available through the BYP pin.

Figure 18 represents a SPX3819 standard application circuit. The EN (enable) pin is pulled high (>2.0V) to enable the regulator. To disable the regulator, $EN < 0.4V$.

Fig. 18: Standard Application Circuit

The SPX3819 in Figure 19 illustrates a typical adjustable output voltage configuration. Two resistors (R1 and R2) set the output voltage. The output voltage is calculated using the formula:

$$V_{OUT} = 1.235V \times [1 + R1/R2]$$

R2 must be >10kΩ and for best results, R2 should be between 22kΩ and 47kΩ.

**500mA Low-Noise LDO Voltage Regulator****REVISION HISTORY**

Revision	Date	Description
2.0.0	08/23/12	Reformat of Datasheet Addition of SPX3819R2-L and SPX3819R2-L/TR part numbers
2.0.1	12/02/13	Added Storage Temperature Range and Junction Temperature in ABS MAX Ratings.
2.0.2	05/20/14	Updated package drawings and corrected DFN-8 package marking information [ECN 1423-03 6/3/14]
2.0.3	08/31/16	Updated logo and Ordering Information table.
2.0.4	07/19/18	Update to MaxLinear logo. Updated format and Ordering Information. Clarified ADJ and BYP pin. Correct y-axis on Figure 14. Updated ESD rating.
2.0.5	12/05/19	Corrected table alignment on last 5 specs of the Electrical Specifications table.
