ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

V_{IN} ..... -0.3V to 7.0V
V_{EN}, V_{FLG} 7.0V
Storage Temperature ..... -65°C to 150°C
Power Dissipation ..... Internally Limited
Lead Temperature (Soldering, 10 sec) ..... 300°C
ESD Rating (HBM - Human Body Model) 2kV
ESD Rating (MM - Machine Model) 200V

OPERATING RATINGS

Input Voltage Range V_{IN} ..... 1.75V to 5.5V
Junction Temperature Range ..... -40°C to 125°C
Thermal Resistance θ_{JA} 128.4ºC/W

ELECTRICAL SPECIFICATIONS

Specifications are for an Operating Junction Temperature of T_J = 25°C only; limits applying over the full Operating Junction Temperature range are denoted by a "•". Minimum and Maximum limits are guaranteed through test, design, or statistical correlation. Typical values represent the most likely parametric norm at T_J = 25°C, and are provided for reference purposes only. Unless otherwise indicated, 1.8V to 5.5V, C_{IN} = 47µF//1µF, C_{OUT} = 10µF, T_J = –40°C to 125°C.

Parameter	Min.	Typ.	Max.	Units		Conditions
Input Supply Voltage	1.8		5.5	V	•	
Input Quiescent Current		80	150	µA	•	XRP2526 (Both Channels enabled) V_{IN}=5V, I_{OUT1} = I_{OUT2} =0mA
Input Quiescent Current		52	100	µA	•	XRP2525 & XRP2526 (1 Channel enabled) V_{IN}=5V, I_{OUT1} =0mA
Input Shutdown Current			3	µA	•	V_{IN}=5V, Channel(s) disabled
Maximum Output Current per channel	900			mA	•	XRP2525 and XRP2526
Output Leakage Current			10	µA		V_{IN}=5V, V_{OUT}=0V, Each channel, Switch off
Reverse Leakage Current			10	µA		V_{IN}=0V, V_{OUT}=5V, Each channel, Switch off
Output MOSFET Resistance		80	140	mΩ	•	I_{OUT}=0.3A, Each channel
Output turn-on delay		1000		µs		V_{IN}=5V, R_L=10Ω, C_{OUT}=1µF, each output
Output turn-on rise time		2000	4000	µs		V_{IN}=5V, R_L=10Ω, C_{OUT}=1µF, each output
Output turn-off delay		10	20	µs		V_{IN}=5V, R_L=10Ω, C_{OUT}=1µF, each output
Output turn-off fall time		22	50	µs		V_{IN}=5V, R_L=10Ω, C_{OUT}=1µF, each output
Current limit threshold	0.90	1.15	1.40	A	•	V_{IN} – V_{OUT} =0.3V, Internally set
Short Circuit Current Limit		0.66xI_{LIM}		A		V_{OUT} =0V
Output Voltage Short Circuit Detect Threshold		925		mV		Operates in short circuit current limit mode when output voltage is below threshold.
Safe Operating Area (SOA) Current Limit		3		A		
Over temperature shutdown threshold		135		°C		Temperature rising
Over temperature shutdown threshold hysteresis		10		°C		Temperature decreasing
Under-voltage lockout threshold	1.55	1.68	1.75	V		V_{IN} rising or falling
Under-voltage lockout hysteresis		50		mV		
FLG output logic low voltage		100	250	mV		I_{FLG}=10mA, V_{IN}=5.5V
FLG output high leakage			1	µA		
FLG blanking time		10		ms		
EN input logic high voltage	1.5			V	•	
EN input logic low voltage			0.5	V	•	
EN input leakage current	-1	0	1	µA		V_{EN}=0V or V_{EN}=5.5V

BLOCK DIAGRAM

PIN ASSIGNMENT

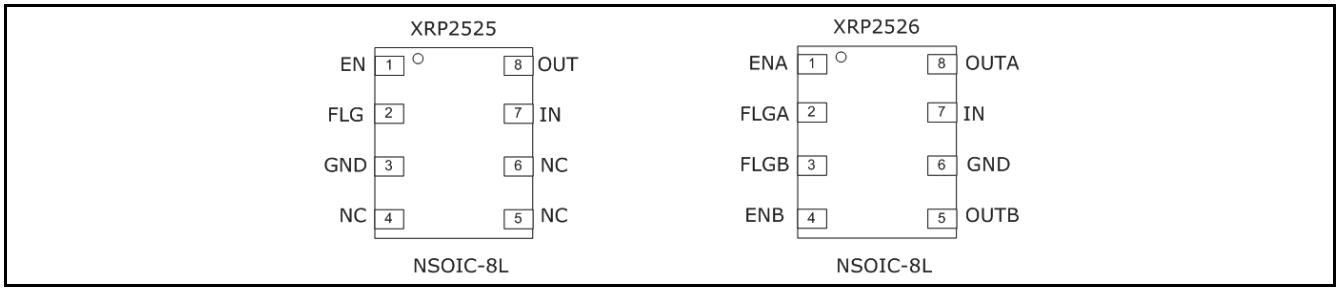

Fig. 3: XRP2525 - XRP2526 Pin Assignment

PIN DESCRIPTION – XRP2525

Name	Pin Number	Description
EN	1	Channel Enable Input Active High for XRP2525-1 and Active Low for XRP2525-2
FLG	2	Error Flag Signal Active low open drain output. Active on over-current, over-temperature or UVLO conditions.
GND	3	Ground Signal
NC	4,5,6	No Connect
IN	7	Voltage Input Pin
OUT	8	Voltage Output Pin

PIN DESCRIPTION – XRP2526

Name	Pin Number	Description
EN_X	1,4	Channel Enable Input Active High for XRP2526-1 and Active Low for XRP2526-2
FLG_X	2,3	Error Flag Signal Active low open drain output. Active on over-current, over-temperature or UVLO conditions.
GND	6	Ground Signal
IN	7	Voltage Input Pin
OUT_X	5,8	Voltage Output Pin

ORDERING INFORMATION

Part Number	Temperature Range	Marking	Package	Packing Quantity	Note 1	Note 2
XRP2525ID-1-F	-40°C≤T_A≤+85°C	2525ID 1 YYWW X	NSOIC8	Bulk	Lead Free and Halogen Free	Single Channel Active high
XRP2525IDTR-1-F				2.5K/Tape & Reel		
XRP2525ID-2-F	-40°C≤T_A≤+85°C	2525ID 2 YYWW X	NSOIC8	Bulk	Lead Free and Halogen Free	Single Channel Active low
XRP2525IDTR-2-F				2.5K/Tape & Reel		
XRP2526ID-1-F	-40°C≤T_A≤+85°C	2526ID 1 YYWW X	NSOIC8	Bulk	Lead Free and Halogen Free	Dual Channel Active high
XRP2526IDTR-1-F				2.5K/Tape & Reel		
XRP2526ID-2-F	-40°C≤T_A≤+85°C	2526ID 2 YYWW X	NSOIC8	Bulk	Lead Free and Halogen Free	Dual Channel Active low

THEORY OF OPERATION

The XRP2525 and XRP2526 devices are respectively single and dual channel integrated high-side power distribution switches that can be used in any self or bus powered USB applications. They are compliant with the latest USB 3.0 specifications. The reverse current protection feature prevents current to flow from OUT to IN when the device is disabled.

INPUT & OUTPUT

Placing bulk capacitances of at least 47µF and 10µF at the input and output pins respectively reduces power supply transients under heavy current load conditions.

It is important to place a 1µF ceramic bypass capacitor from IN to GND as close as possible to the device in order to control supply transients.

Furthermore, bypassing the output pin with a 0.1µF to 1µF ceramic capacitor improves the device response to short-circuit transients.

ERROR FLAG

The error flag signal (FLG_X output pin) is an open-drain output and is pulled low (active low) upon detection of the following conditions:

- Over-current condition
- Over-temperature condition
- Under voltage lockout condition

Over-temperature and under voltage lockout conditions are flagged immediately while the over – current condition is reported only if this condition persists continuously for longer than the blanking time of 10ms. The blanking time prevents erroneous reporting of current faults due to brief output current spikes.

Once activated, the error flag signal remains low until all fault conditions have been removed and is independent for each individual channel.

CURRENT LIMIT

The current limit threshold is preset internally. It protects the output MOSFET switches from damages resulting from undesirable short circuit conditions or excess inrush current, which is often encountered during hot plug-in. The low limit of the current limit threshold of the XRP2525 and XRP2526 allows a minimum current of 0.9A through the MOSFET switches.

When an overcurrent condition is detected, the output current is limited to a constant current limit threshold value and output voltage is reduced accordingly. Triggering the current limit function is signaled by the Error Flag after 10ms of blanking time period.

UNDER-VOLTAGE LOCKOUT

Under-voltage lockout function (UVLO) keeps the internal power switch from being turned on until the power supply has reached at least 1.68V, even if the switch is enabled. Upon detection of an input voltage below approximately 1.68V, the power switch is turned off while a fault condition is reported by the error flag signal.

THERMAL PROTECTION

Internal thermal sensing circuitry monitors the operating temperature of the device for each channel independently. Upon detection of a temperature in excess of 135°C, the power switch for the given channel is disabled preventing any damages to the device while a fault condition is reported by the error flag signal. A built-in 10°C hysteresis allows the device to cool down to 125°C before resuming normal operations on the faulty channel at which point the error flag signal is cleared.
