# 1. Pin Out

## 1.1 Pin Assignment

Figure 1-1: 16-Pin QFN

## 1.2 Pin Descriptions

Table 1-1: Pin Descriptions

Pin Number	Name	Timing	Type	Description
1,2	DDI, $\overline{\text{DDI}}$	Analog	Input	Serial digital differential input.
3	$V_{EE}$	–	Power	Most negative power supply connection. Connect to GND.
4	$R_{SET}$	Analog	Input	External output amplitude control resistor.
5,8,10,13,14, 15,16	NC	–	–	No Connect. Not bonded internally.
6	$\overline{\text{DISABLE}}$	Non Synchronous	Input	Serial output disable. When asserted LOW, the $\text{SDO}/\overline{\text{SDO}}$ output driver is powered off. $\text{SDO}/\overline{\text{SDO}}$ will float to $V_{CC}$ through the pull-up resistor.
7	RSVD	–	Reserved	Do not connect.
9	$V_{CC}$	–	Power	Most positive power supply connection. Connect to +3.3V.
11,12	$\overline{\text{SDO}}$ , SDO	Analog	Output	Serial digital differential output.
–	Center Pad	–	Power	Connect to most negative power supply plane following the recommendations in <a href="#">Recommended PCB Footprint on page 12</a> .

## 2. Electrical Characteristics

### 2.1 Absolute Maximum Ratings

Parameter	Value
Supply Voltage	-0.5V to 3.6 V <sub>DC</sub>
Input ESD Voltage	4kV
Storage Temperature Range	-50°C < T <sub>s</sub> < 125°C
Input Voltage Range (any input)	-0.3 to (V <sub>CC</sub> +0.3)V
Operating Temperature Range	0°C to 70°C
Solder Reflow Temperature	260°C
NOTE: Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions or at any other condition beyond those indicated in the AC/DC Electrical Characteristic sections is not implied.	

### 2.2 DC Electrical Characteristics

**Table 2-1: DC Electrical Characteristics**

V<sub>CC</sub> = 3.3V ±5%; T<sub>A</sub> = 0°C to 70°C, unless otherwise shown

Parameter	Symbol	Conditions	Min	Typ	Max	Units
Supply Voltage	V <sub>CC</sub>	–	3.135	3.3	3.465	V
Power Consumption	P <sub>D</sub>	T <sub>A</sub> = 25°C, SDO/ $\overline{\text{SDO}}$ enabled	–	168	–	mW
		T <sub>A</sub> = 25°C, SDO/ $\overline{\text{SDO}}$ disabled	–	96	–	mW
Supply Current	I <sub>s</sub>	T <sub>A</sub> = 25°C, SDO/ $\overline{\text{SDO}}$ enabled	–	51	–	mA
		T <sub>A</sub> = 25°C, SDO/ $\overline{\text{SDO}}$ disabled	–	29	–	mA
Output Voltage	V <sub>CMOUT</sub>	Common mode	–	V <sub>CC</sub> - V <sub>OUT</sub>	–	V
Input Voltage	V <sub>CMIN</sub>	Common mode	1.4 + ΔV <sub>DDI</sub> /2	–	V <sub>CC</sub> - ΔV <sub>DDI</sub> /2	V
$\overline{\text{DISABLE}}$ Input	V <sub>IH</sub>	I <sub>IH</sub> ≤ 10 uA	2.0	–	–	V
	V <sub>IL</sub>	I <sub>IL</sub> ≤ 10 uA	–	–	0.8	V

## 2.3 AC Electrical Characteristics

**Table 2-2: AC Electrical Characteristics**

$V_{CC} = 3.3V \pm 5\%$ ;  $T_A = 0^\circ C$  to  $70^\circ C$ , unless otherwise shown

Parameter	Symbol	Conditions	Min	Typ	Max	Units	Notes
Serial input data rate	$DR_{SDO}$	–	–	–	540	Mb/s	1
Additive jitter	–	270Mb/s	–	16	–	ps <sub>p-p</sub>	–
Rise/Fall time	$t_r, t_f$	–	400	–	800	ps	2
Mismatch in rise/fall time	$\Delta t_r, \Delta t_f$	–	–	–	35	ps	–
Duty cycle distortion	–	–	–	–	100	ps	3
Overshoot	–	–	–	–	8	%	3
Output Return Loss	ORL	–	15	23	–	dB	4
Output Voltage Swing	$V_{OUT}$	$R_{SET} = 750\Omega$	750	800	850	mV <sub>p-p</sub>	3
Input Voltage Swing	$\Delta V_{DDI}$	Differential	300	–	2200	mV <sub>p-p</sub>	–

NOTES:

1. The input coupling capacitor must be set accordingly for lower data rates.
2. Rise/Fall time measured between 20% and 80%.
3. Single Ended into  $75\Omega$  external load.
4. ORL depends on board design. The GS9077 achieves this specification on Gennum's evaluation boards.

## 2.4 Solder Reflow Profiles

The device is manufactured with Matte-Sn terminations and is compatible with both standard eutectic and Pb-free solder reflow profiles. MSL qualification was performed using the maximum Pb-free reflow profile shown in [Figure 2-1](#). The recommended standard Pb reflow profile is shown in [Figure 2-2](#).

**Figure 2-1: Maximum Pb-free Solder Reflow Profile (Preferred)**

**Figure 2-2: Standard Pb Reflow Profile**

### 3. Input / Output Circuits

**Figure 3-1: Differential Input Stage (DDI/ $\overline{DDI}$ )**

**Figure 3-2: Differential Output Stage (SDO/ $\overline{SDO}$ )**

## 4. Detailed Description

### 4.1 Input Interfacing

DDI/ $\overline{\text{DDI}}$  are high impedance differential inputs. The equivalent input circuit is shown in [Figure 3-1](#).

Several conditions must be observed when interfacing to these inputs:

- The differential input signal amplitude must be between 300 and 2200mVpp.
- The common mode voltage range must be as specified in the [DC Electrical Characteristics on page 4](#).
- For input trace lengths longer than approximately 1cm, the inputs should be terminated as shown in the Typical Application Circuit.

The GS9077 inputs are self-biased, allowing for simple AC coupling to the device. For serial digital video, a minimum capacitor value of 4.7 $\mu$ F should be used to allow coupling of pathological test signals. A tantalum capacitor is recommended.

### 4.2 Output Interfacing

The GS9077 outputs are current mode, and will drive typically 800mV into a 75 $\Omega$  load. These outputs are protected from accidental static damage with internal ESD protection diodes.

In order for a DDI output circuit using the GS9077 to meet this specification, the output application circuit shown in [Typical Application Circuit on page 10](#) is recommended.

The value of  $L_{\text{COMP}}$  will vary depending on the PCB layout, with a typical value of 5.6nH. A 4.7 $\mu$ F capacitor is used for AC coupling the output of the device. This value is chosen to ensure that pathological signals can be coupled without a significant DC component occurring. Please see [Application Information on page 10](#) for more details.

### 4.2.1 Output Amplitude (RSET)

The output amplitude of the GS9077 can be adjusted by changing the value of the  $R_{SET}$  resistor as shown in Table 4-1. For an 800mV<sub>p-p</sub> output with a nominal  $\pm 7\%$  tolerance, a value of 750 $\Omega$  is required. A  $\pm 1\%$  SMT resistor should be used.

The  $R_{SET}$  resistor is part of the high speed output circuit of the GS9077. The resistor should be placed as close as possible to the  $R_{SET}$  pin. In addition, the PCB capacitance should be minimized at this node by removing the PCB groundplane beneath the  $R_{SET}$  resistor and the  $R_{SET}$  pin.

**Table 4-1:  $R_{SET}$  vs  $V_{OD}$**

$R_{SET} R (\Omega)$	Output Swing (mVp-p)
995	608
824	734
750	800
680	884
573	1040

NOTE: For reliable operation of the GS9077 over the full temperature range, do not use an  $R_{SET}$  value below 573 $\Omega$ .

### 4.2.2 Output Disable

The serial output disable ( $\overline{DISABLE}$ ), disables power to the current mode serial digital output driver. When asserted LOW, the SDO/ $\overline{SDO}$  output driver is powered off. SDO/ $\overline{SDO}$  will float to  $V_{CC}$  through the pull-up resistor.

## 4.3 Output Return Loss Measurement

To perform a practical return loss measurement, it is necessary to force the GS9077 output to a DC high or low condition. The actual measured return loss will be based on the outputs being static at  $V_{CC}$  or  $V_{CC}-1.6V$ . Under normal operating conditions the outputs of the device swing between  $V_{CC}-0.4V$  and  $V_{CC}-1.2V$ .

## 5. Application Information

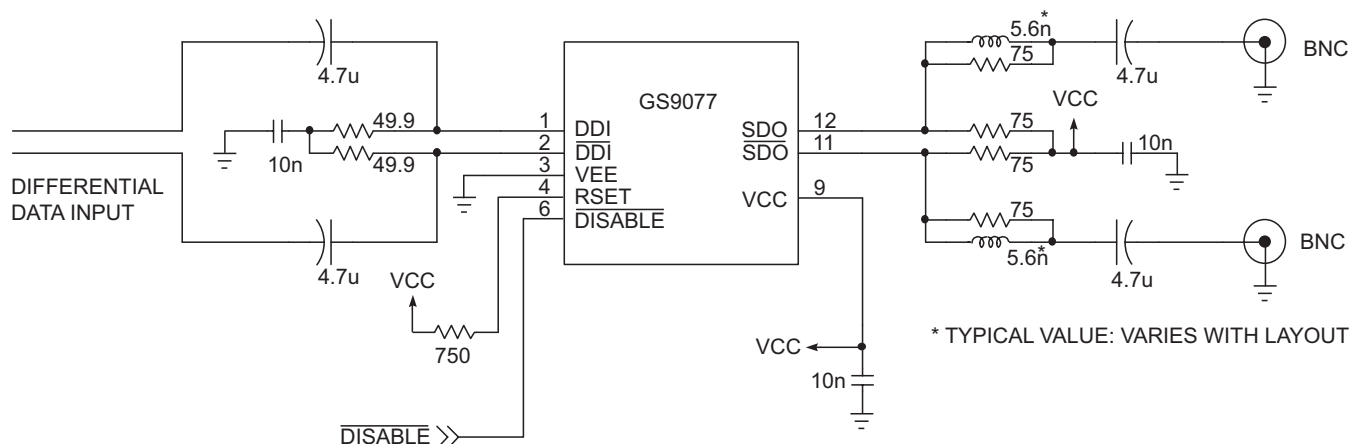

### 5.1 PCB Layout

Special attention must be paid to component layout when designing serial digital interfaces for SDTV.

An FR-4 dielectric can be used, however, controlled impedance transmission lines are required for PCB traces longer than approximately 1cm. Note the following PCB artwork features used to optimize performance:

- The PCB trace width for SD rate signals is closely matched to SMT component width to minimize reflections due to changes in trace impedance.
- The PCB ground plane is removed under the GS9077 output components to minimize parasitic capacitance.
- The PCB ground plane is removed under the GS9077 R<sub>SET</sub> pin and resistor to minimize parasitic capacitance.
- Input and output BNC connectors are surface mounted in-line to eliminate a transmission line stub caused by a BNC mounting via high speed traces which are curved to minimize impedance variations due to change of PCB trace width.

### 5.2 Typical Application Circuit

NOTE: All resistors in Ohms, capacitors in Farads, and inductors in Henrys, unless otherwise noted.

**Figure 5-1: Typical Application Circuit**

## 6. Package & Ordering Information

### 6.1 Package Dimensions

## 6.2 Recommended PCB Footprint

The Center Pad should be connected to the most negative power supply plane (VEE) by a minimum of 5 vias.

NOTE: Suggested dimensions only. Final dimensions should conform to customer design rules and process optimizations.

## 6.3 Packaging Data

Parameter	Value
Package Type	4mm x 4mm 16-pin QFN
Package Drawing Reference	JEDEC M0220
Moisture Sensitivity Level	3
Junction to Case Thermal Resistance, $\theta_{j-c}$	31.0°C/W
Junction to Air Thermal Resistance, $\theta_{j-a}$ (at zero airflow)	43.8°C/W
Psi, $\Psi$	11.0°C/W
Pb-free and RoHS compliant	Yes

## 6.4 Marking Diagram

Pin 1 Indicator

XXXX - Lot/Work Order ID

YYWW - Date Code

YY - 2-digit year

WW - 2-digit week number

## 6.5 Ordering Information

	Part Number	Package	Temperature Range
GS9077	GS9077CNE3	16-pin QFN	0°C to 70°C

## 7. Revision History
