v01.1211

#### RoHS EARTH FRIERPLY Serial Control Interface

The HMC1018LP4E contains a 3-wire SPI compatible digital interface (SERIN, CLK, LE). The serial control interface is activated when S/A is kept high. The 5-bit serial word must be loaded MSB first as a 6-bit word with the first bit ignored. The positive-edge sensitive CLK and LE requires clean transitions. If mechanical switches are used, sufficient debouncing should be provided. When LE is high, 5-bit data in the serial input register is transferred to the attenuator. When LE is high CLK is masked to prevent data transition during output loading.

For all modes of operations, the state will stay constant while LE is kept low.

#### Serial Mode Truth Table

Control Voltage Input					Attenuation
P4 16 dB	P3 8 dB	P2 4 dB	P1 2 dB	P0 1 dB	State RF1 - RF2
High	High	High	High	High	Reference I.L.
High	High	High	High	Low	1 dB
High	High	High	Low	High	2 dB
High	High	Low	High	High	4 dB
High	Low	High	High	High	8 dB
Low	High	High	High	High	16 dB
Low	Low	Low	Low	Low	31 dB

Any combination of the above states will provide an attenuation approximately equal to the sum of the bits selected.

Parameter	Тур.
Min. serial period, t <sub>sck</sub>	100 ns
Control set-up time, t <sub>cs</sub>	20 ns
Control hold-time, t <sub>CH</sub>	20 ns
LE setup-time, t <sub>LN</sub>	10 ns
Min. LE pulse width, t <sub>LEW</sub>	10 ns
Min LE pulse spacing, t <sub>LES</sub>	630 ns
Serial clock hold-time from LE, $t_{_{CKN}}$	10 ns
Hold Time, t <sub>PH.</sub>	0 ns
Latch Enable Minimum Width, t	10 ns
Setup Time, t <sub>PS</sub>	2 ns

#### Asynchronous Mode

The HMC1018LP4E can be switched to an asynchronous mode to change the attenuation state rapidly to one of four predefined states. The logic state of ASM1-ASM2 determines one of the four attenuation states in the asynchronous mode per truth table. The asynchronous mode works either directly or latched. To activate the direct-asynchronous-mode, S/A needs to be at logic low and LE needs to be at logic high. In the direct-asynchronous-mode, any change in the logic state of ASM1-ASM2 directly affects the attenuation state. In the latched-asynchronous-mode, the attenuation state changes per the asynchronous mode truth table when S/A is at logic low and LE is pulsed per the timing diagram. The attenuation stays constant (latched) as long as LE stays low. In the asynchronous mode, the inputs SERIN and CLK do not affect the attenuation state.

Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use, nor for any infringements of patents or other rights of third parties that may result from its use. Specifications subject to change without notice. No license is granted by implication or otherwise under any patent or patent rights of Analog Devices. #### Timing Diagram (Latched Asynchronous Mode)

## Asynchronous Mode Truth Table

1.0 dB LSB GaAs MMIC 5-BIT DIGITAL

ASM1	ASM2	Attenuation State RF1-RF2
High	High	Reference I.L.
High	Low	3 dB
Low	High	28 dB
Low	Low	31 dB

#### Power-Up States

If LE is set to logic LOW at power-up, the logic state of PUP determines the power-up state of the part per PUP truth table. If the LE is set to logic HIGH at powerup, the logic state of ASM1-ASM2 determines the power-up state of the part per truth table for the asynchronous mode. The attenuator latches in the desired power-up state approximately 200 ms after power-up.

## PUP Truth Table

PUP	Attenuation State
High	Reference I.L.
Low	31 dB

Note: The logic state of ASM1-ASM2 determines the power-up state of the part per truth table for the asynchronous mode when LE is high at power-up.

#### **Bias Voltages & Currents**

Vdd	+5V @ 0.2 mA
Vdd1	+5V @ 4.5 mA
Vss	-5V @ 5 mA

#### **Control Voltage**

State	Bias Condition
Low	0 to 0.8V @ 1 µA
High	2 to 5V @ 1 μA

#### List of Materials for Evaluation PCB EVAL01-HMC1018LP4E [1]

Item	Description
J1, J2	2.9 mm PC Mount RF Connector
J3, J4, J6	DC Connector
J5	2mm DC Header
C1-C3	100 pF Capacitor, 0402 Pkg.
C4-C6	1000 pF Capacitor, 0402 Pkg.
U1	HMC1018LP4E Digital Attenuator
PCB <sup>[2]</sup>	600-00196-00-2 Evaluation Board

 $\left[1\right]$  Reference this number when ordering complete evaluation PCB

[2] Circuit Board Material: Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
