1 Absolute maximum ratings and operating conditions

Table 1: Absolute maximum ratings (AMR)

Symbol	Parameter		Value	Unit
V_{CC}	Supply voltage, $V_{CC} = (V_{CC+}) - (V_{CC-})$ (1)		5.5	V
V_{ID}	Differential input voltage (2)		±5	
V_{IN}	Input voltage range		(V_{CC-}) - 0.3 to (V_{CC+}) + 0.3	
R_{thja}	Thermal resistance junction-to-ambient (3)	SOT23-5	250	°C/W
		SC70-5	205	
R_{thjc}	Thermal resistance junction-to-case (3)	SOT23-5	81	
		SC70-5	172	
T_{stg}	Storage temperature		-65 to 150	°C
T_j	Junction temperature		150	
T_{LEAD}	Lead temperature (soldering 10 s)		260	
ESD	HBM: human body model (4)		5000	V
	MM: machine model (5)		300	
	CDM: charged device model (6)		1500	
	Latch-up immunity		200	mA

Notes:

(1)All voltage values, except the differential voltage are referenced to (V_{CC-})

(2)The magnitude of the input and output voltages must never exceed the supply rail ±0.3 V

(3)Short circuits can cause excessive heating. These values are typical

(4)Human body model: a 100 pF capacitor is charged to the specified voltage, then discharged through a 1.5 kΩ resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.

(5)Machine model: a 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω). This is done for all couples of connected pin combinations while the other pins are floating.

(6)Charged device model: all pins and the package are charged together to the specified voltage and then discharged directly to the ground through only one pin. This is done for all pins.
