t_{en}	Delay Time, CONV↓to SDO Enabled	C_{LOAD} = 20pF	●		35	120	ns
t_{hDO}	Time Output Data Remains Valid After SCK↓	C_{LOAD} = 20pF	●	5	15		ns
t_r	SDO Rise Time	C_{LOAD} = 20pF			25		ns
t_f	SDO Fall Time	C_{LOAD} = 20pF			12		ns

Note 1: Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.

Note 2: All voltage values are with respect to GND.

Note 3: Integral nonlinearity is defined as deviation of a code from a straight line passing through the actual endpoints of the transfer curve. The deviation is measured from the center of the quantization band.

Note 4: Channel leakage current is measured while the part is in sample mode.

Note 5: Assumes f_{SCK} = $f_{SCK(MAX)}$. In the case of the LTC1860L SCK does not have to be clocked during this time if the SDO data word is not desired. In the case of the LTC1861L a minimum of 2 clocks are required on the SCK input after CONV falls to configure the MUX during this time.

PIN FUNCTIONS LTC1860L

V_{REF} (Pin 1): Reference Input. The reference input defines the span of the A/D converter and must be kept free of noise with respect to GND.

IN^+, IN^- (Pins 2, 3): Analog Inputs. These inputs must be free of noise with respect to GND.

GND (Pin 4): Analog Ground. GND should be tied directly to an analog ground plane.

CONV (Pin 5): Convert Input. A logic high on this input starts the A/D conversion process. If the CONV input is left high after the A/D conversion is finished, the part powers down. A logic low on this input enables the SDO pin, allowing the data to be shifted out.

SDO (Pin 6): Digital Data Output. The A/D conversion result is shifted out of this pin.

SCK (Pin 7): Shift Clock Input. This clock synchronizes the serial data transfer.

V_{CC} (Pin 8): Positive Supply. This supply must be kept free of noise and ripple by bypassing directly to the analog ground plane.

PIN FUNCTIONS

LTC1861L (MSOP Package)

CONV (Pin 1): Convert Input. A logic high on this input starts the A/D conversion process. If the CONV input is left high after the A/D conversion is finished, the part powers down. A logic low on this input enables the SDO pin, allowing the data to be shifted out.

CH0, CH1 (Pins 2, 3): Analog Inputs. These inputs must be free of noise with respect to AGND.

AGND (Pin 4): Analog Ground. AGND should be tied directly to an analog ground plane.

DGND (Pin 5): Digital Ground. DGND should be tied directly to an analog ground plane.

SDI (Pin 6): Digital Data Input. The A/D configuration word is shifted into this input.

SDO (Pin 7): Digital Data Output. The A/D conversion result is shifted out of this output.

SCK (Pin 8): Shift Clock Input. This clock synchronizes the serial data transfer.

V_{CC} (Pin 9): Positive Supply. This supply must be kept free of noise and ripple by bypassing directly to the analog ground plane.

V_{REF} (Pin 10): Reference Input. The reference input defines the span of the A/D converter and must be kept free of noise with respect to AGND.

LTC1861L (SO-8 Package)

CONV (Pin 1): Convert Input. A logic high on this input starts the A/D conversion process. If the CONV input is left high after the A/D conversion is finished, the part powers down. A logic low on this input enables the SDO pin, allowing the data to be shifted out.

CH0, CH1 (Pins 2, 3): Analog Inputs. These inputs must be free of noise with respect to GND.

GND (Pin 4): Analog Ground. GND should be tied directly to an analog ground plane.

SDI (Pin 5): Digital Data Input. The A/D configuration word is shifted into this input.

SDO (Pin 6): Digital Data Output. The A/D conversion result is shifted out of this output.

SCK (Pin 7): Shift Clock Input. This clock synchronizes the serial data transfer.

V_{CC} (Pin 8): Positive Supply. This supply must be kept free of noise and ripple by bypassing directly to the analog ground plane. V_{REF} is tied internally to this pin.

APPLICATIONS INFORMATION

LTC1860L OPERATION

Operating Sequence

The LTC1860L conversion cycle begins with the rising edge of CONV. After a period equal to t_{CONV}, the conversion is finished. If CONV is left high after this time, the LTC1860L goes into sleep mode drawing only leakage current. On the falling edge of CONV, the LTC1860L goes into sample mode and SDO is enabled. SCK synchronizes the data transfer with each bit being transmitted from SDO on the falling SCK edge. The receiving system should capture the data from SDO on the rising edge of SCK. After completing the data transfer, if further SCK clocks are applied with CONV low, SDO will output zeros indefinitely. See Figure 1.

Analog Inputs

The LTC1860L has a unipolar differential analog input. The converter will measure the voltage between the "IN^+" and "IN^-" inputs. A zero code will occur when IN^+ minus IN^- equals zero. Full scale occurs when IN^+ minus IN^- equals V_{REF} minus 1LSB. See Figure 2. Both the "IN^+" and "IN^-" inputs are sampled at the same time, so common mode noise on the inputs is rejected by the ADC. If "IN^-" is grounded and V_{REF} is tied to V_{CC}, a rail-to-rail input span will result on "IN^+" as shown in Figure 3.

Reference Input

The voltage on the reference input of the LTC1860L (and the LTC1861L MSOP package) defines the full-scale range of the A/D converter. These ADCs can operate with reference voltages from V_{CC} to 1V.

APPLICATIONS INFORMATION

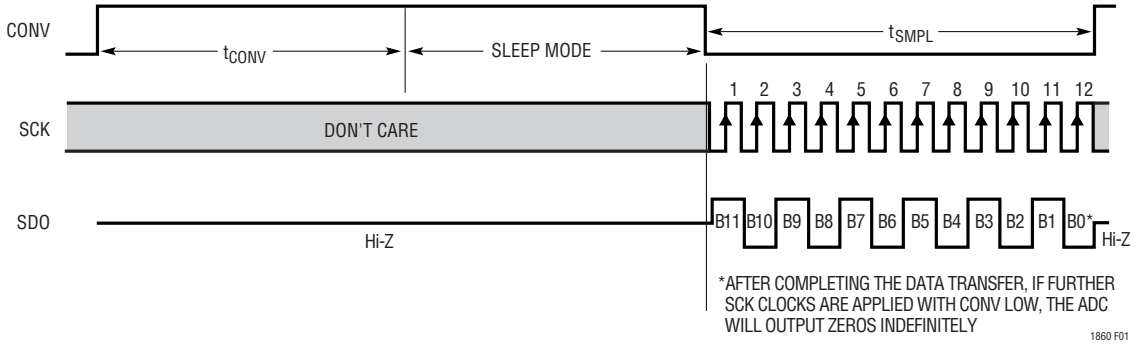

Figure 1. LTC1860L Operating Sequence

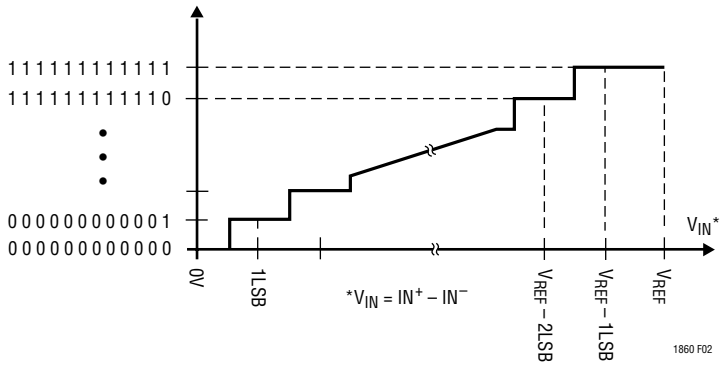

Figure 2. LTC1860L Transfer Curve

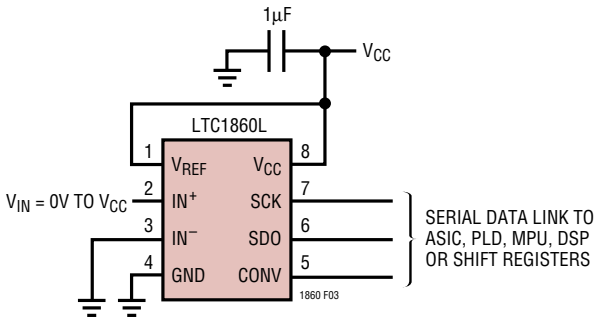

Figure 3. LTC1860L with Rail-to-Rail Input Span

LTC1861L OPERATION

Operating Sequence

The LTC1861L conversion cycle begins with the rising edge of CONV. After a period equal to t_{CONV}, the conversion is finished. If CONV is left high after this time, the LTC1861L goes into sleep mode. The LTC1861L's 2-bit data word is clocked into the SDI input on the rising edge of SCK after CONV goes low. Additional inputs on the SDI pin are then ignored until the next CONV cycle. The shift clock (SCK) synchronizes the data transfer with each bit being transmitted on the falling SCK edge and captured on the rising SCK edge in both transmitting and receiving systems. The data is transmitted and received simultaneously (full duplex). After completing the data transfer, if further SCK clocks are applied with CONV low, SDO will output zeros indefinitely. See Figure 4.

Analog Inputs

The two bits of the input word (SDI) assign the MUX configuration for the next requested conversion. For a given channel selection, the converter will measure the voltage between the two channels indicated by the "+" and "–" signs in the selected row of Table 1. In single-ended mode, all input channels are measured with respect to GND (or AGND). A zero code will occur when the "+" input minus the "–" input equals zero. Full scale occurs when the "+" input minus the "–" input equals V_{REF} minus 1LSB. See Figure 5. Both the "+" and "–" inputs are sampled at the same time so common mode noise is rejected. The input span in the SO-8 package is fixed at $V_{REF} = V_{CC}$. If the "–" input in differential mode is grounded, a rail-to-rail input span will result on the "+" input.

Reference Input

The reference input of the LTC1861L SO-8 package is internally tied to V_{CC}. The span of the A/D converter is therefore equal to V_{CC}. The voltage on the reference input of the LTC1861L MSOP package defines the span of the A/D converter. The LTC1861L MSOP package can operate with reference voltages from 1V to V_{CC}.

GENERAL ANALOG CONSIDERATIONS

Grounding

The LTC1860L/LTC1861L should be used with an analog ground plane and single point grounding techniques. Do not use wire wrapping techniques to breadboard and evaluate the device. To achieve the optimum performance, use a printed circuit board. The ground pins (AGND and DGND for the LTC1861L MSOP package and GND for the LTC1860L and LTC1861L SO-8 package) should be tied directly to the analog ground plane with minimum lead length.

Bypassing

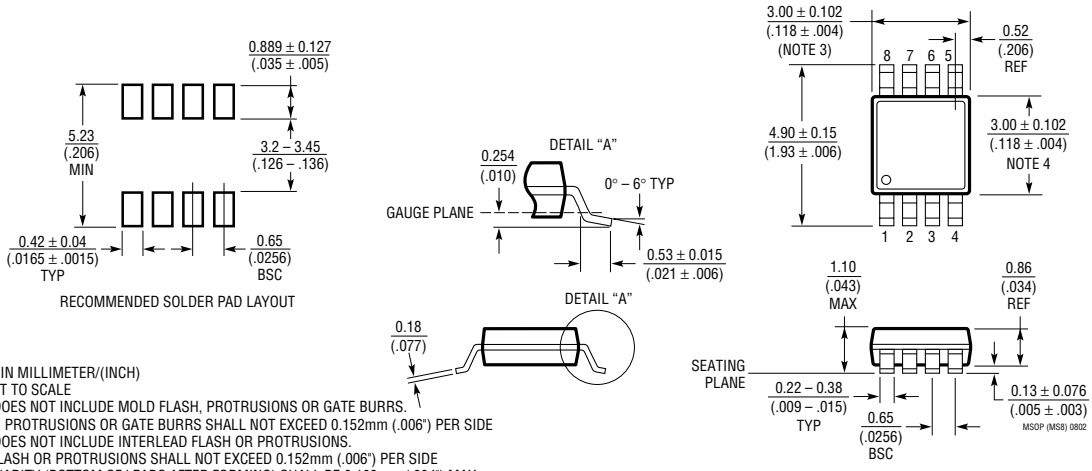
For good performance, the V_{CC} and V_{REF} pins must be free of noise and ripple. Any changes in the V_{CC}/V_{REF} voltage with respect to ground during the conversion cycle can induce errors or noise in the output code. Bypass the V_{CC} and V_{REF} pins directly to the analog ground plane with a minimum of 1µF tantalum. Keep the bypass capacitor leads as short as possible.

Analog Inputs

Because of the capacitive redistribution A/D conversion techniques used, the analog inputs of the LTC1860L/LTC1861L have capacitive switching input current spikes. These current spikes settle quickly and do not cause a problem if source resistances are less than 200Ω or high speed op amps are used (e.g., the LT®1211, LT1469, LT1807, LT1810, LT1630, LT1226 or LT1215). But if large source resistances are used, or if slow settling op amps drive the inputs, take care to ensure the transients caused by the current spikes settle completely before the conversion begins.

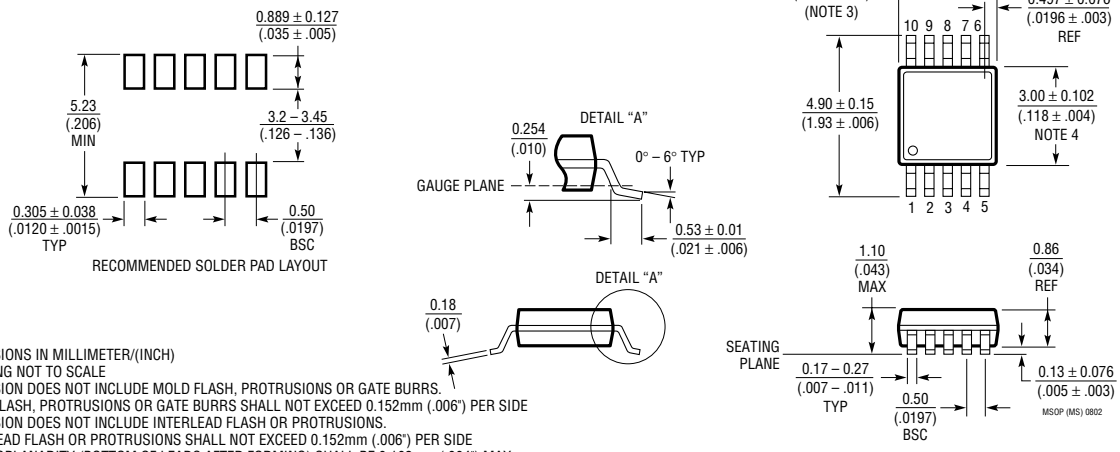
PACKAGE DESCRIPTION

MS8 Package
8-Lead Plastic MSOP
(Reference LTC DWG # 05-08-1660)



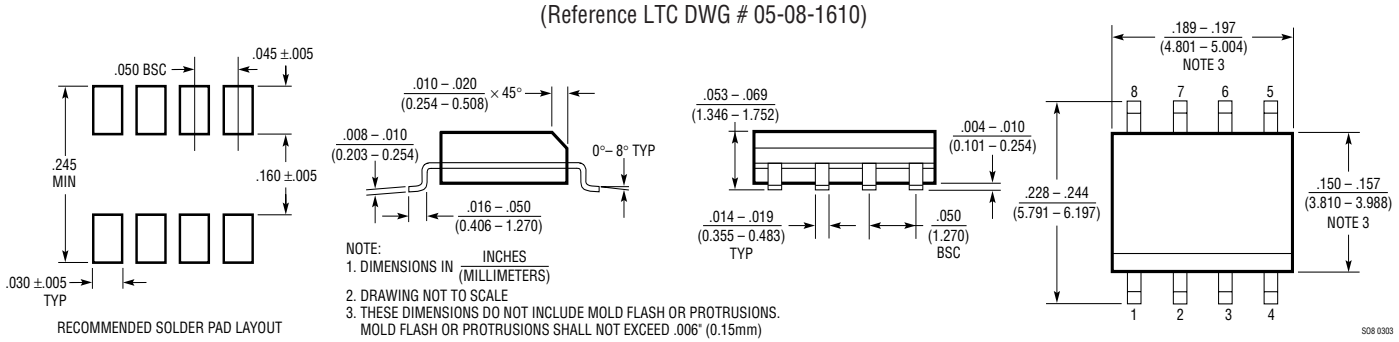
NOTE:
1. DIMENSIONS IN MILLIMETER/(INCH)
2. DRAWING NOT TO SCALE
3. DIMENSION DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS.
   MOLD FLASH, PROTRUSIONS OR GATE BURRS SHALL NOT EXCEED 0.152mm (.006") PER SIDE
4. DIMENSION DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSIONS.
   INTERLEAD FLASH OR PROTRUSIONS SHALL NOT EXCEED 0.152mm (.006") PER SIDE
5. LEAD COPLANARITY (BOTTOM OF LEADS AFTER FORMING) SHALL BE 0.102mm (.004") MAX

MS Package
10-Lead Plastic MSOP
(Reference LTC DWG # 05-08-1661)



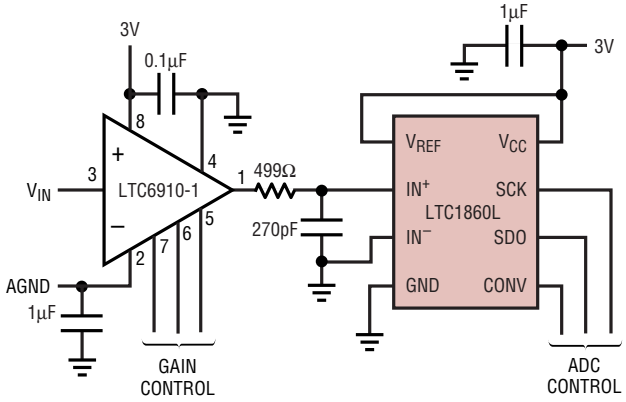
NOTE:
1. DIMENSIONS IN MILLIMETER/(INCH)
2. DRAWING NOT TO SCALE
3. DIMENSION DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS.
   MOLD FLASH, PROTRUSIONS OR GATE BURRS SHALL NOT EXCEED 0.152mm (.006") PER SIDE
4. DIMENSION DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSIONS.
   INTERLEAD FLASH OR PROTRUSIONS SHALL NOT EXCEED 0.152mm (.006") PER SIDE
5. LEAD COPLANARITY (BOTTOM OF LEADS AFTER FORMING) SHALL BE 0.102mm (.004") MAX

S8 Package
8-Lead Plastic Small Outline (Narrow .150 Inch)
(Reference LTC DWG # 05-08-1610)



TYPICAL APPLICATION

Tiny 2-Chip Data-Acquistion System



LTC6910-1 (IN TSOT-23 PACKAGE) COMPACTLY ADDS 40dB OF INPUT GAIN RANGE TO THE LTC1860L (IN MSOP 8-PIN PACKAGE). SINGLE 3V SUPPLY
