MTCH6301

Table of Contents

TO OUR VALUED CUSTOMERS

It is our intention to provide our valued customers with the best documentation possible to ensure successful use of your Microchip products. To this end, we will continue to improve our publications to better suit your needs. Our publications will be refined and enhanced as new volumes and updates are introduced.

If you have any questions or comments regarding this publication, please contact the Marketing Communications Department via E-mail at **docerrors@microchip.com**. We welcome your feedback.

Most Current Data Sheet

To obtain the most up-to-date version of this data sheet, please register at our Worldwide Web site at:

http://www.microchip.com

You can determine the version of a data sheet by examining its literature number found on the bottom outside corner of any page. The last character of the literature number is the version number, (e.g., DS30000000A is version A of document DS30000000).

Errata

An errata sheet, describing minor operational differences from the data sheet and recommended workarounds, may exist for current devices. As device/documentation issues become known to us, we will publish an errata sheet. The errata will specify the revision of silicon and revision of document to which it applies.

To determine if an errata sheet exists for a particular device, please check with one of the following:

• Microchip's Worldwide Web site; **http://www.microchip.com**
• Your local Microchip sales office (see last page)

When contacting a sales office, please specify which device, revision of silicon and data sheet (include literature number) you are using.

Customer Notification System

Register on our web site at **www.microchip.com** to receive the most current information on all of our products.

1.0 SYSTEM BLOCK DIAGRAM

FIGURE 1-1: SYSTEM BLOCK DIAGRAM
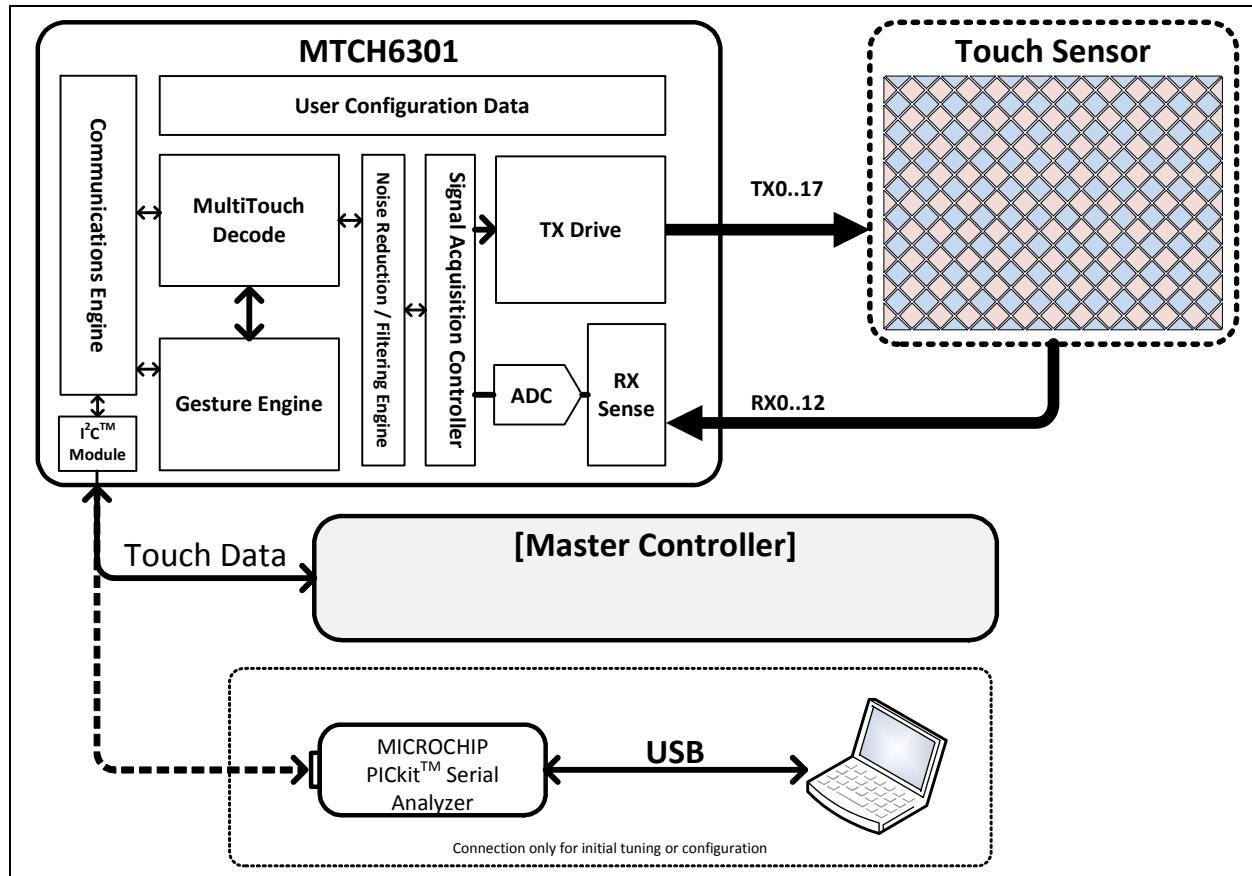

2.0 CONFIGURATION AND SETUP

The MTCH6301 is preconfigured for a 12 Receiver (RX)/9 Transmitter (TX) touch sensor, mapped as shown in **Section 5.1 "Typical Application Circuit"**. While the device will work out-of-the-box using this specific sensor configuration, most applications will require additional configuration and sensor tuning to determine the correct set of parameters to be used in the final application.

Microchip provides a PC-based configuration tool for this purpose, available in the mTouch™ Sensing Solution Design Center (www.microchip.com/mtouch). Use of this tool requires a PICkit™ Serial Analyzer (updated with MTCH6301 support), as well as access to the I^2C communications bus of the MTCH6301 device.

Once the development process is complete, this modified parameter set must either be written permanently to the controller via NVRAM (see **Section 8.3 "Nonvolatile RAM (NVRAM)"**), or alternatively, it can be sent every time the system is powered on. Both the PICkit Serial Analyzer and the master I^2C controller can be used for this purpose.

TX14	5	O	
TX15	4	O	
TX16	3	O	
TX17	2	O	
N/C	9	N/C	No Connect
V$_{CAP}$	7	P	CPU Logic Filter Capacitor Connection
V$_{DD}$	17, 28, 40	P	Positive Supply for Peripheral Logic and I/O Pins
V$_{SS}$	6, 16, 29, 39	P	Ground Reference for Logic and I/O Pins; This pin must be connected at all times.

MTCH6301

5.0 LAYOUT

5.1 Typical Application Circuit

The following schematic portrays a typical application circuit, based on a 12RX/ 9TX touch sensor.

FIGURE 5-1: TYPICAL APPLICATION CIRCUIT

5.2 Decoupling Capacitors

The use of decoupling capacitors on power supply pins, such as V_{DD} and V_{SS}, is required (see Figure 5-1). Consider the following criteria when using decoupling capacitors:

1. Value and type of capacitor:

A value of 0.1 µF (100 nF), 10-20V is recommended. The capacitor should be a low Equivalent Series Resistance (low ESR) capacitor and have resonance frequency in the range of 20 MHz and higher. It is further recommended that ceramic capacitors be used.

2. Placement on the Printed Circuit Board:

The decoupling capacitors should be placed as close to the pins as possible. It is recommended that the capacitors be placed on the same side of the board as the device. If layout space is constrained, the capacitor can be placed on another layer on the PCB and connected using a via. Please ensure that the trace length from the pin to the capacitor is less than one-quarter inch (6 mm) in length.

3. Handling high-frequency noise:

If the board is experiencing high-frequency noise, upward of tens of MHz, add a second ceramic-type capacitor in parallel to the above-described decoupling capacitor. The value of the second capacitor can be in the range of 0.01 µF to 0.001 µF. Place this second capacitor next to the primary decoupling capacitor. In high-speed circuit designs, consider implementing a decade pair of capacitances as close to the power and ground pins as possible (for example, 0.1 µF in parallel with 0.001 µF).

4. Maximizing performance:

On the board layout from the power supply circuit, run the power and return traces to the decoupling capacitors first, and then to the device pins. This ensures that the decoupling capacitors are first in the power chain. It is equally important to keep the trace length between the capacitor and the power pins to a minimum, thereby reducing PCB track inductance.

5.3 Bulk Capacitors

The use of a bulk capacitor is recommended to improve power supply stability. Typical values range from 4.7 µF to 47 µF. This capacitor should be located as close to the device as possible.

5.4 Capacitor on Internal Voltage Regulator (V$_{CAP}$)

A low ESR (1 ohm) capacitor is required on the V$_{CAP}$ pin, which is used to stabilize the internal voltage regulator output. The V$_{CAP}$ pin must not be connected to V$_{DD}$ and must have a C$_{EFC}$ capacitor with at least a 6V rating, connected to ground. The type can be ceramic or tantalum.

5.5 Touch Sensor Design Considerations

5.5.1 SENSOR PATTERNS AND PCB LAYOUT

With regard to touch sensor patterns, please refer to the mTouch Design Center (www.microchip.com/mtouch) for additional information on designing and laying out a touch sensor pattern, as well as using the correct techniques for PCB trace routing.

5.5.2 PROTOTYPING DESIGNS

Due to their complexity, touch sensor designs typically require a thorough debugging phase to ensure a reliable product. If possible, it is suggested that flexible prototyping hardware be created with this in mind. A common example is providing external access to the communication lines for quick test and tuning while in-circuit. Microchip's Projected Capacitive Configuration Utility (PCU) and a configured PICkit Serial Analyzer can assist with early prototype development. See the online Microchip MTCH6301 device page for these and other support materials.

5.5.3 SENSOR OVERLAY MATERIAL

To prevent saturation of sensor levels, a minimum 0.5 mm plastic or glass overlay is required for proper operation of the device, even during a prototyping phase, even if this value is different than the final design.

> **Note:** At no time should the device be expected to respond correctly to a user touching a bare PCB sensor.

5.5.4 OPERATION WITH AN LCD

MTCH6301 has integrated algorithms to detect and minimize the effects of noise, but proper care should always be taken in selecting an LCD and support components with a focus on reducing noise as much as possible. Since the interaction between the touch sensor and display is highly dependent upon the physical arrangement of the components, proper testing should always be executed with a fully integrated device. Please reference your projected capacitive touch screen manufacturer's integration guide for additional design considerations.

5.6 Sensor Layout Configuration

To properly configure a sensor from a physical layout standpoint, the following registers must be correctly set:

- RX Pin Map/TX Pin Map
- RX Scaling Coefficient/TX Scaling Coefficient
- Flip State

5.6.1 RX/TX PIN MAP

By default, the RX and TX pins are set as shown in the Typical Application Circuit (see **Section 5.1 "Typical Application Circuit"**). It is recommended to keep this layout if possible. If a different layout or a different amount of sensor channels is required, the RX and TX pins are configured via the Pin Map register arrays. To access these arrays, please reference **Section 6.0 "Communication Protocol"** and **Section 7.0 "Memory Map"**.

The RX and TX lines are configurable for the purpose of making trace routing and board layout more convenient. Please note that while RX pins can be used as TX pins instead, a single pin cannot be used as *both* an RX and a TX channel concurrently. The pin maps are comprised of Pin Map ID numbers, which are shown in Table 5-1.

MTCH6301

TABLE 5-1: **PIN MAP ID CHART**

Pin	Map ID (RX)	Map ID (TX)
RX0	8	—
RX1	7	26
RX2	6	25
RX3	5	12
RX4	4	11
RX5	3	10
RX6	2	9
RX7	1	1
RX8	0	0
RX9	9	24
RX10	10	23
RX11	11	22
RX12	12	—
TX0	—	13
TX1	—	6
TX2	—	3
TX3	—	2
TX4	—	4
TX5	—	30
TX6	—	29
TX7	—	28
TX8	—	7
TX9	—	14
TX10	—	15
TX11	—	16
TX12	—	5
TX13	—	8
TX14	—	34
TX15	—	33
TX16	—	32
TX17	—	31

5.6.2 RX/ TX SCALING COEFFICIENT

Scaling coefficient registers exist in RAM for each axis (RX/TX) and *must* be modified in accordance with the number of channels that are in use (see Table 5-2). See **Section 7.0 "Memory Map"** for the location of these parameters.

TABLE 5-2: **RX/TX SCALING COEFFICIENTS**

Number of Channels	RX/TX Scaling Coefficient	
	(Base 10)	(Base 16)
3	21845	0x5555
4	16384	0x4000
5	13107	0x3333
6	10922	0x2AAA
7	9362	0x2492
8	8192	0x2000
9	7281	0x1C71
10	6553	0x1999
11	5957	0x1745
12	5461	0x1555
13	5041	0x13B1
14	4681	0x1249
15	4369	0x1111
16	4096	0x1000
17	3855	0x0F0F
18	3640	0x0E38

5.6.3 SENSOR ORIENTATION (FLIP STATE)

Once the sensor layout is complete, the final output orientation is configured using the Flip State register, as shown in Register 5-1. The Flip State register can be adjusted during operation to support applications where rotation occurs during use. Possible flip state configurations are detailed in Figure 5-2.

Figure 5-2 shows the flip state values for all possible sensor orientations.

REGISTER 5-1:   FLIP STATE REGISTER

U-0	U-0	U-0	U-0	U-0	R/W-0	R/W-0	R/W-1
—	—	—	—	—	SWAP	TXFLIP	RXFLIP
bit 7							bit 0

Legend:			
R = Readable bit	W = Writable bit	U = Unimplemented bit, read as '0'	
-n = Value at POR	'1' = Bit is set	'0' = Bit is cleared	x = Bit is unknown

bit 7-3   **Unimplemented:** Read as '0'

bit 2   **SWAP:**

1 = RX axis horizontal; TX axis vertical
0 = RX axis vertical; TX axis horizontal

bit 1   **TXFLIP:**

1 = Invert the TX axis
0 = Do not invert the TX axis

bit 0   **RXFLIP:**

1 = Invert the RX axis
0 = Do not invert the RX axis

MTCH6301
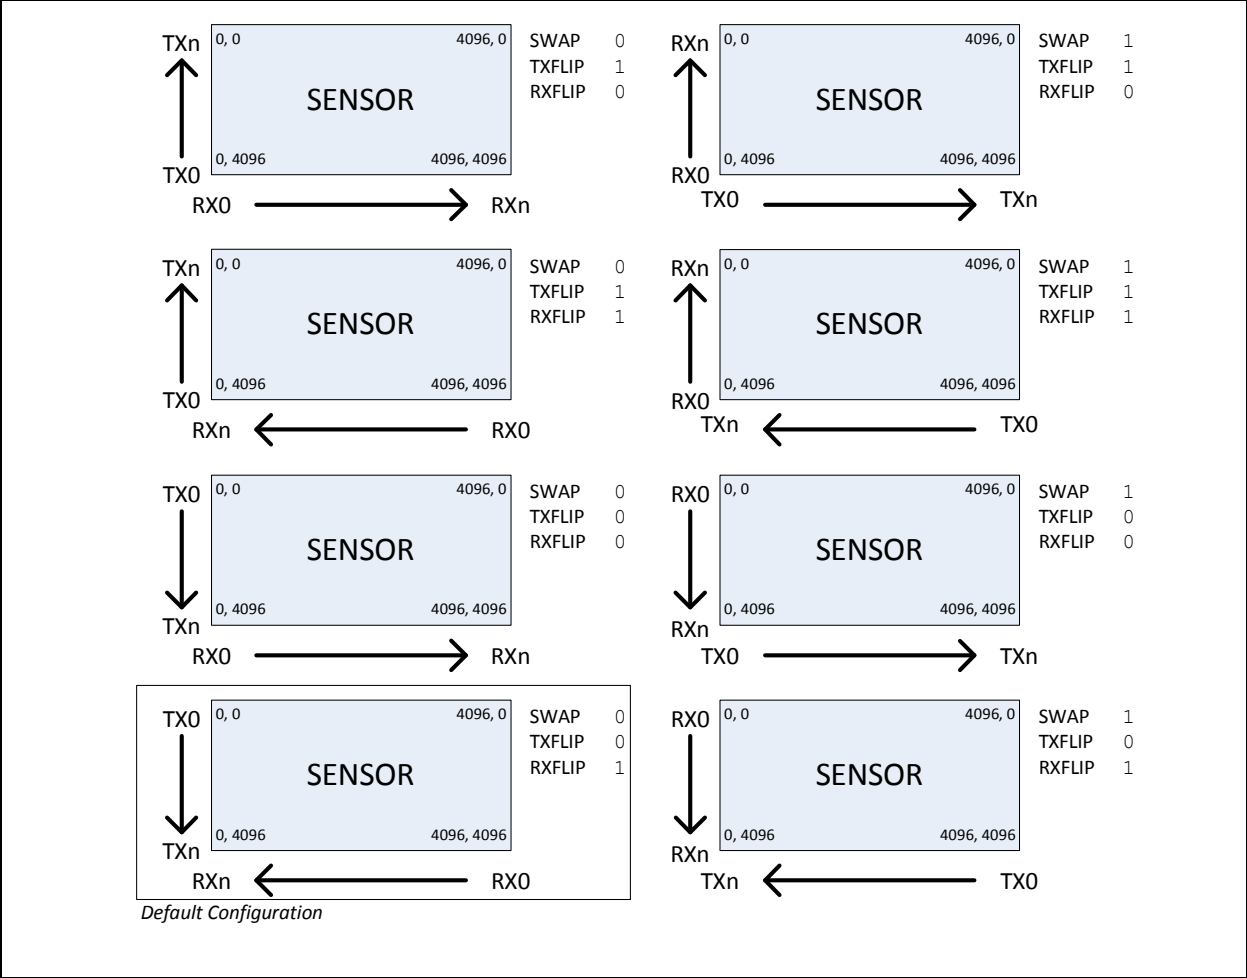

5.6.4   UNUSED RX/TX PINS

Unused RX/TX pins are driven to V_{SS} automatically and should be left as no connects.

5.7 Example Custom Application Layout

An example 4RX/11TX sensor is shown in Figure 5-3. In addition to using a completely modified pin layout, this example differs from the default configuration by also having the TX axis along the bottom (X) and RX axis along the side (Y). Note that some RX pins are also used as TX lines in this example.

FIGURE 5-3: CUSTOM APPLICATION LAYOUT

Sensor Line		MTCH6301 Pin	Map ID
TX	0	TX10	15
	1	TX11	16
	2	TX17	31
	3	TX16	32
	4	TX15	33
	5	TX14	34
	6	RX11	22
	7	TX13	8
	8	TX12	5
	9	RX10	23
	10	RX9	24
RX	0	RX5	3
	1	RX6	2
	2	RX7	1
	3	RX8	0

The Pin Map register array for this particular setup is set as follows:

RX Pin Map: {3,2,1,0}

TX Pin Map: {15,16,31,32,33,34,22,8,5,23,24}
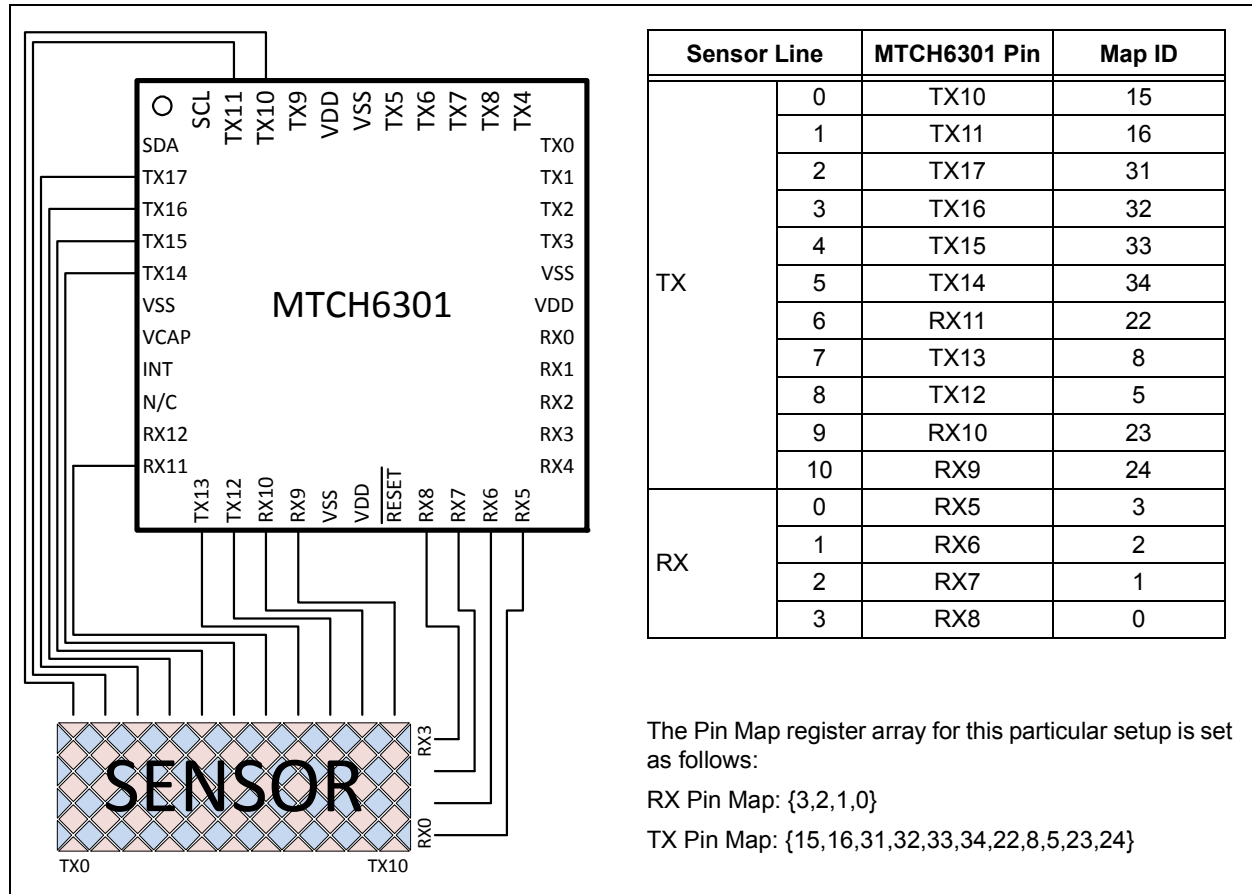

The resulting scaling coefficient for the custom application example is shown in Table 5-3. The scaling coefficients were derived using Table 5-2.

TABLE 5-3: CUSTOM APPLICATION SCALING VALUES

Axis	Channels	Scaling Coefficient
RX	4	16384
TX	11	5957

Using Figure 5-2, the Flip State register should be set to '0b110' or 0x6.

MTCH6301

6.0 COMMUNICATION PROTOCOL

6.1 Overview

The MTCH6301 I^{2}C protocol follows a serial streaming format, not a register-based protocol. To achieve this, the device will assert the INT pin whenever a new packet of data is ready to be transmitted to the host. This will happen under two conditions:

1. New touch or gesture data is available.
2. A command has been sent to the controller and the response to this command is ready.

> **Note:** Note that initiating a read from the device when INT is in a logic '0' state will result in an unpredictable response.

6.2 I^{2}C™ Pin Specification

6.2.1 SERIAL DATA (SDA)

The Serial Data (SDA) signal is the data signal of the device. The value on this pin is latched on the rising edge of the SCL signal when the signal is an input. With the exception of the Start (Restart) and Stop conditions, the high or low state of the SDA pin can only change when the clock signal on the SCL pin is low. During the high period of the clock, the SDA pin's value (high or low) must be stable. Changes in the SDA pin's value while the SCL pin is HIGH will be interpreted as a Start or a Stop condition.

6.2.2 SERIAL CLOCK (SCL)

The Serial Clock (SCL) signal is the clock input signal of the device, generated by the host. The rising edge of the SCL signal latches the value on the SDA pin. MTCH6301 employs clock stretching and this should be taken into account by the master controller. The maximum speed at which MTCH6301 can operate is 400 kbps.

6.2.3 INTERRUPT (INT)

This pin is utilized by MTCH6301 to signal that data is available and that the master controller should invoke a master read. INT is an active-high pin and is held low during all other activities.

> **Note:** If the device is not read within 25 ms of asserting the INT pin, a timeout will occur and data will no longer be available.
6.2.4 DEVICE ADDRESSING

The MTCH6301 7-bit base address is 0x25 and is not configurable by the user. Every transmission must be prefixed with this address, as well as a bit signifying whether the transmission is a master write ('0') or master read ('1'). After appending this Read/Write bit to the base address, this first byte becomes either 0x4A (write) or 0x4B (read).
© 2012-2014 Microchip Technology Inc.

6.3 Generic Read/Write Protocol

6.3.1 MASTER READ WAVEFORM

FIGURE 6-1: MASTER READ WAVEFORM

Note 1: The first byte read from the device denotes the number of bytes *to follow*.

2: The last byte read from the device *must* be followed by a nACK ('1') from the host controller. All other bytes should be followed with ACK ('0').

3: INT will be set low within 10 uS of a correct I^{2}C™ address match.

4: All data (DATA0 – DATAn) must be read at once within a single I^{2}C™ transaction, and Restart conditions are not supported.

6.3.2 MASTER WRITE WAVEFORM

FIGURE 6-2: MASTER WRITE WAVEFORM

Note 1: If the device is sleeping, it *will* ACK the address byte, but *will not* ACK the first byte of the transmission until it is awake. See **Section 9. "Send Enable Touch command (0x00)."** for details.

2: The first byte written to the controller denotes the number of bytes *to follow*.

3: Although it is not required all data be written in a single I^{2}C™ transaction, it is recommended to reduce the chance of a timeout occurring.

MTCH6301

6.3.3   TOUCH PACKET PROTOCOL

Fully-processed touch coordinates will be sent out as they are processed by MTCH6301. Since it is a slave device, the INT pin will be asserted whenever one of these packets is ready for transmission, requiring the master to initiate a Read command. In other words, no Write command is necessary before reading one of these packets.

FIGURE 6-3:   **EXAMPLE TOUCH PACKET WAVEFORM**

Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
D0	1	TOUCHID<3:0>				TCH (0)	0	PEN
D1	0	X<6:0>						
D2	0	0	0	X<11:7>				
D3	0	Y<6:0>						
D4	0	0	0	Y<11:7>				

TOUCHID: Touch ID (0-9)

PEN: Pen State

0 = Pen Up

1 = Pen Down

X: X Coordinate of touch

Y: Y Coordinate of touch

TCH: Always '0'; it denotes a touch packet (vs. gesture)
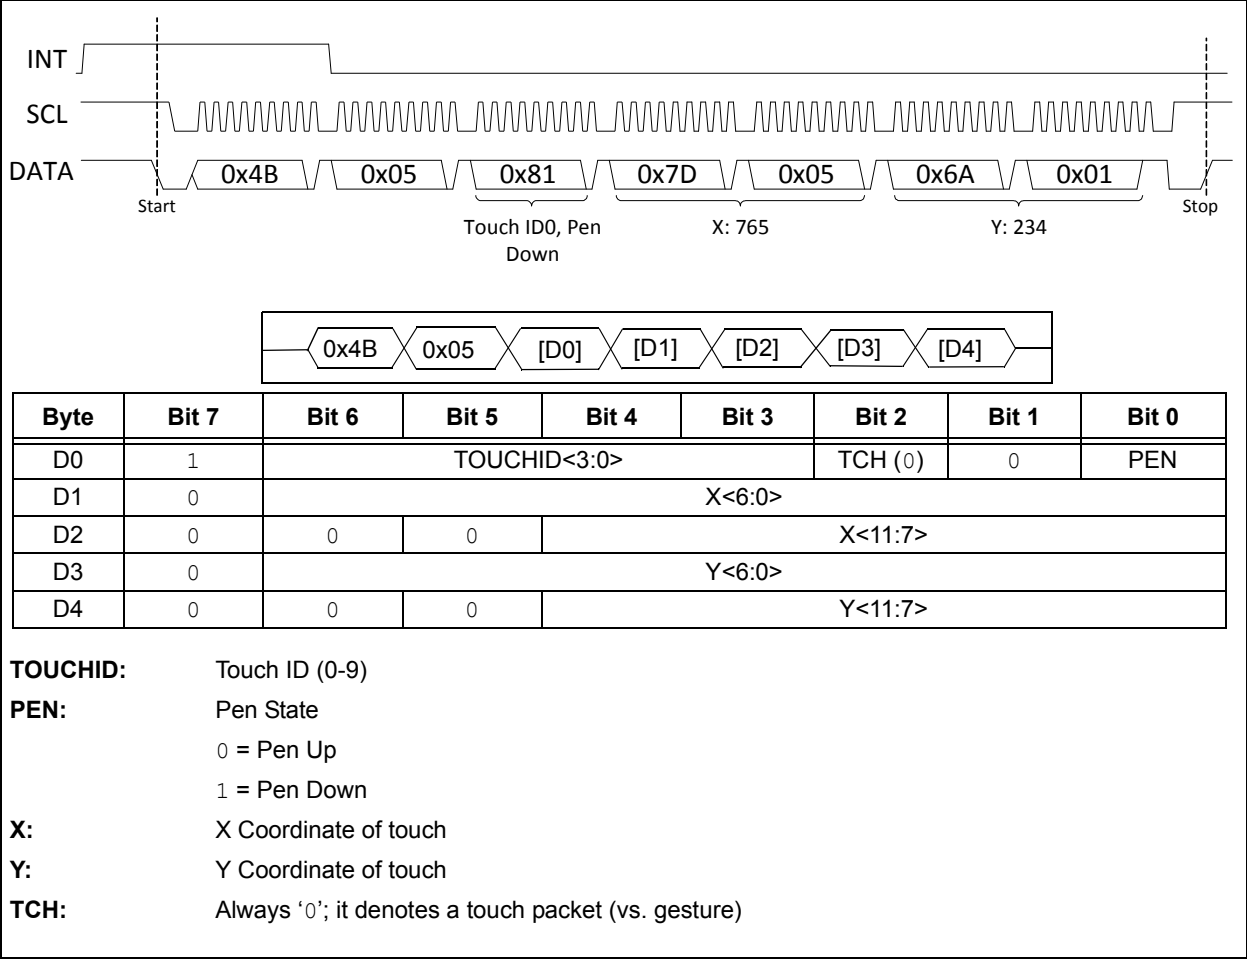

6.4 Gesture Protocol

Similar to touch packets, the following packet is transmitted whenever a gesture is performed on the sensor. This feature can be enabled via the Comm Packet CFG register (see **Section 7.0 "Memory Map"**).

> **Note 1:** Gestures are *not* enabled by default.
>
> **2:** For any *hold* gestures, packets are continuously sent until the gesture is no longer being held.

FIGURE 6-4: **GESTURE PACKET WAVEFORM**

Byte	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
D0	1		TOUCHID<3:0>			GEST -1	0	0
D1	0			GESTURE<6:0>				

TOUCHID: Touch ID (0-9)

GESTURE: Gesture ID

0x10	Single Tap		0x11	Single Tap (hold)
0x20	Double Tap			
0x31	Up Swipe		0x32	Up Swipe (hold)
0x41	Right Swipe		0x42	Right Swipe (hold)
0x51	Down Swipe		0x52	Down Swipe (hold)
0x61	Left Swipe		0x62	Left Swipe (hold)

GEST: Always '1'; it denotes a gesture packet (vs. touch)

MTCH6301

6.5   Command Protocol

Bidirectional communication protocol (for reading/writing configuration data) is shown in Figure 6-5.

FIGURE 6-5:   COMMAND PROTOCOL

NUM:	Number of bytes to follow (true for NUM, NUM_0, NUM_1).
CMD:	Command sent/ responded to
RES:	Status result of command:
	0x00 = Success
	0x80 = Parameter out of range
	0xFE = Timeout (not enough bytes received)
	0xFF = Unrecognized command
	0xFD = Invalid parameter
	0xFC = Missing or extra parameter
D_0 - D_n:	Data associated with command
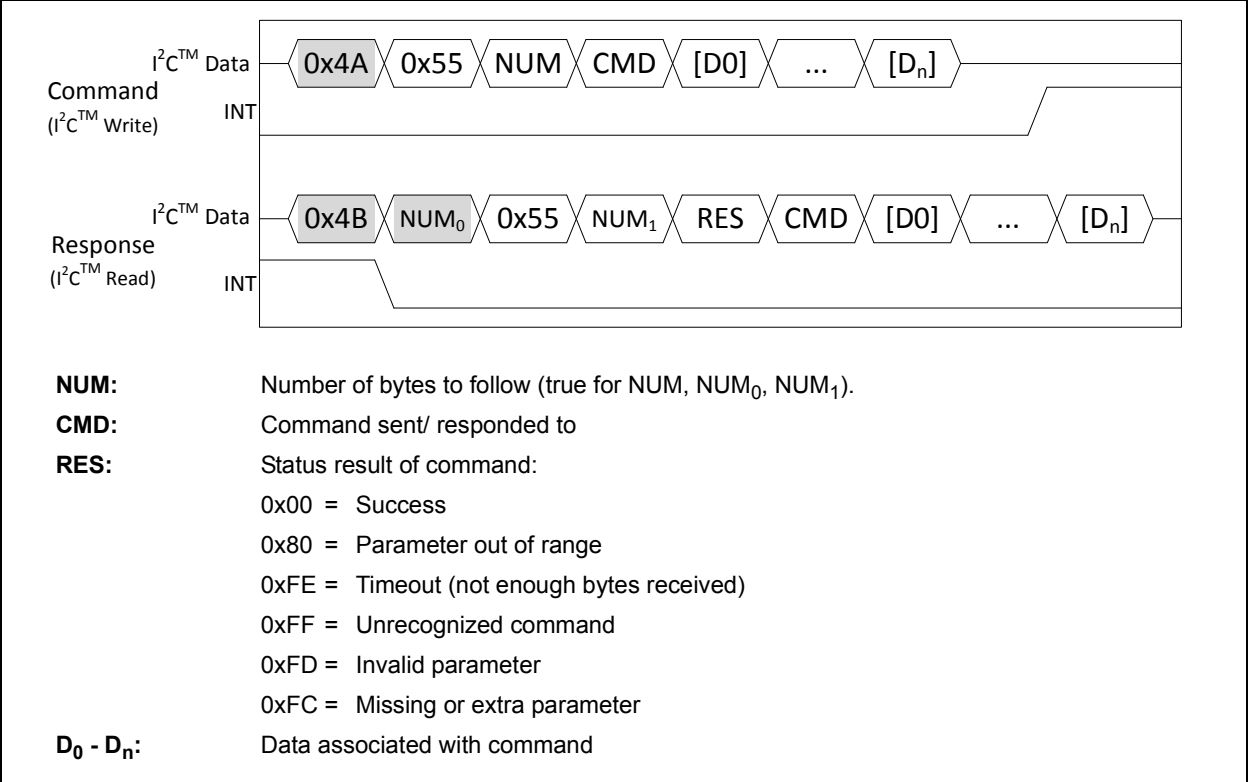

6.6   Full Command Set

A complete listing of MTCH6301 commands is shown in Table 6-1. Any commands which contain additional data bytes, either sent or received, are shown alongside an example data stream in the following sections.

6.6.1   OVERVIEW

TABLE 6-1:   COMMAND SET

CMD ID	Name	Description
0x00	Enable Touch	Enable Touch functionality
0x01	Disable Touch	Disable Touch functionality
0x14	Scan Baseline	Instruct controller to scan for new sensor baseline immediately
0x15	Write Register	Write data to specified register
0x16	Read Register	Read data from specified register
0x17	Write NVRAM	Write all current register values to NVRAM
0x18	Software Sleep	Instruct controller to enter Sleep mode
0x19	Erase NVRAM	Erase the contents of the nonvolatile RAM section
0x1A	Manufacturing Test	Perform manufacturing tests on all sensor I/O channels
0x83	Device ID	Retrieve device ID/version

6.6.2 WRITE REGISTER/ READ REGISTER

It writes or reads to a single register. Please note that all registers are volatile, and any modified data will be lost on power-down. To store the current register configuration permanently, the Write NVRAM command should be used.

FIGURE 6-6: WRITE REGISTER COMMAND

Command (I^{2}C^{TM} Write)
0x4A 0x55 0x04 0x15 [D0] [D1] [D2]

DS40001663B-page 17
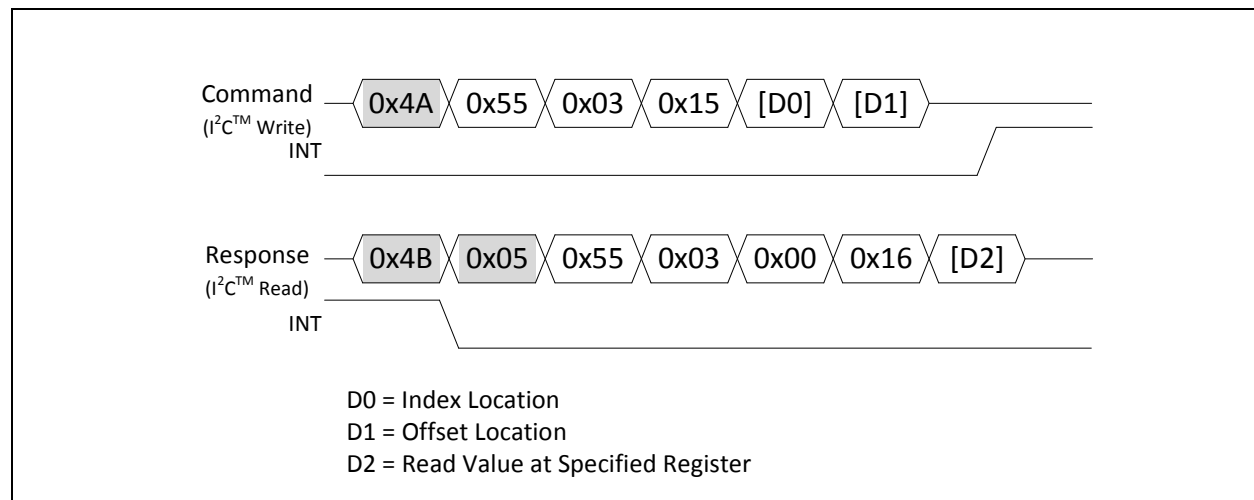

MTCH6301

6.6.3 MANUFACTURING TEST

This test performs the following checks on all mapped sensor pins:

1. Short to V$_{DD}$
2. Short to GND
3. Pin-to-pin short.

If an I/O error is discovered, bits for the pins in question will be set in the TX Short Status and RX Short Status registers.

Please note that:

1. The RX7/RX8 pins will *always* report an error.
2. If the sensor has more than 16 TX channels, then channels 17 and 18 will *never* report an error.

FIGURE 6-8: MANUFACTURING TEST

Command (I²C™ Write): 0x4A | 0x55 | 0x01 | 0x1A
INT

Response (I²C™ Read): 0x4B | 0x05 | 0x55 | 0x03 | 0x00 | 0x1A | [D0]
INT

D0 = Result; 0 = success, 1 = I/O error
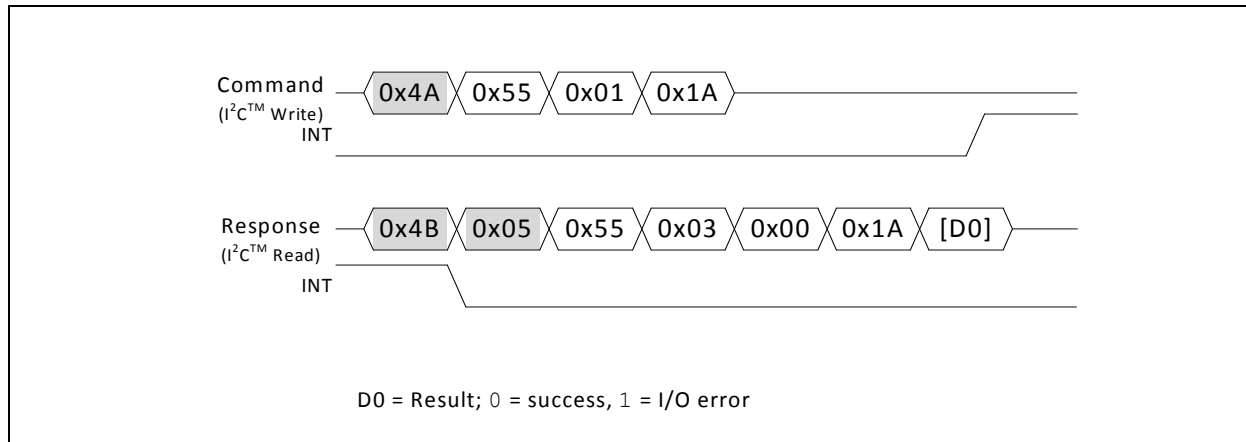

6.6.4 DEVICE ID

It allows the host to read the device ID.

FIGURE 6-9: DEVICE ID

Command (I²C™ Write): 0x4A | 0x55 | 0x01 | 0x83
INT

Response (I²C™ Read): 0x4B | 0x05 | 0x55 | 0x03 | 0x00 | 0x83 | 0X00 | 0X10 | 0X02 | 0X05
INT
6.6.5 TYPICAL I²C COMMAND TRANSMISSION

Figure 6-10 depicts the master controller reading from RAM location 0x01, to determine the number of RX channels the controller is configured to use (0x0C or 12).

FIGURE 6-10: I²C™ COMMAND READ AND WRITE
6.7 Wake on I²C

The MTCH6301 is capable of waking up upon receiving an I²C command from the host. Please note that since wake-up time can take up to 350 µs, the controller must resend any I²C bytes that were not acknowledged (ACK) before continuing the transmission.

Since the controller will wake up upon a correct I²C address match, it does not matter which command is sent. For simplicity, the Enable Touch command is recommended.

6.8 $\overline{\text{RESET}}$ Pin Behavior

The MTCH6301 can be reset by driving the $\overline{\text{RESET}}$ pin low. When released, the device will assert the INT pin until it has finished initialization routines. During this time, any communication to the I²C address (0x25) will result in a nACK.

FIGURE 6-11: INT BEHAVIOR AFTER RESET

80 ms < t_{RST} < 100 ms
6.9   Recommended Start-up Sequence

For ease of use, it is recommended that all custom parameters be stored in NVRAM at the time of production (or on first power-on) for the lifetime of the chip. Once this has been completed, the start-up procedure for the rest of the product's life should be as follows:

1. Prepare I^{2}C master/host controller; initialize any components of the system that depend upon the MTCH6301 output.
2. Set $\overline{\text{RESET}}$ low for > 5 µs.
3. Set $\overline{\text{RESET}}$ high.
4. Wait for low state on INT.
5. If desired, check for correct device operation by using the Device ID command.

> **Note:**   If the application is designed to use the default parameters, the above start-up procedure should be used.

If the application is such that using the NVRAM to store custom parameters isn't possible, the following start-up procedure is recommended:

1. Prepare I^{2}C master/host controller; initialize any components of the system that depend upon the MTCH6301 output.
2. Set $\overline{\text{RESET}}$ low for > 5 µs.
3. Set $\overline{\text{RESET}}$ high.
4. Wait for low state on INT.
5. If desired, check for correct device operation by using the Device ID command.
6. Send Disable Touch command (0x01).
7. Write all desired parameters to the device.
8. Send Scan Baseline command (0x14).
9. Send Enable Touch command (0x00).

7.0 MEMORY MAP

TABLE 7-1: MTCH6301 MEMORY MAP

Group	Index Byte	Offset Byte	Register Name	Size (Bytes)	Description	Data Range	Default Value

Self	0x10	0x00	Self Scan Time	1	Number of self readings to sum per electrode	1-30	5
		0x01	Self Threshold	1	Threshold at which a touch may be present	10-150	40
Mutual	0x20	0x00	Mutual Scan Time	1	Number of mutual readings to sum per node	1-30	9
		0x01	Mutual Threshold	1	Threshold at which a touch may be present	10-150	40
Decoding	0x30	0x00	Flip State	1	This determines the orientation of the sensor with respect to the coordinate output	0b000-0b111	0b001
		0x01	Number of Averages	1	Number of previous touch coordinates to average with current position coordinate (smoothing filter)	1-16	8
		0x04	Minimum Touch Distance	1	Minimum distance (interpolated coordinates) allowed between two touch locations before suppressing the weaker touch.	0-255	150
		0x05	Pen Down Timer	1	Number of successive sensor scans identifying a touch required prior to transmitting touch data	0-10	3
		0x06	Pen Up Timer	1	Number of successive sensor scans without detecting a touch prior to a touch up packet being sent	0-10	3
		0x07	Touch Suppression Value	1	The maximum number of touch points to transmit. Note that ten touch IDs are still analyzed and tracked, just not reported; 0 = Disabled	0-10	0

MTCH6301

TABLE 7-1: MTCH6301 MEMORY MAP (CONTINUED)

Group	Index Byte	Offset Byte	Register Name	Size (Bytes)	Description	Data Range	Default Value
Gestures	0x50	0x00	RX Swipe Length	1	Minimum swipe distance in the RX direction before gesture is recognized	10-255	160
		0x01	TX Swipe Length	1	Minimum swipe distance in the TX direction before gesture is recognized	10-255	150
		0x02	Swipe Boundary	1	The distance (in interpolated positions) a swipe can move, in the direction opposite to the direction being swiped, before the gesture is canceled.	0-255	150
		0x03	Swipe Hold Threshold	1	The maximum distance (in interpolated positions) a swipe-and-hold gesture can move before the gesture is canceled	0-255	70
		0x04	Swipe Time <7:0>	2	The maximum amount of time (in ms) the user has to perform a swipe after initial pen down	0-65535	200
		0x05	Swipe Time <15:8>				
		0x06	Tap Time <7:0>	2	The maximum amount of time (in ms) the user has to perform a click after initial pen down	0-65535	500
		0x07	Tap Time <15:8>				
		0x08	Tap Threshold	1	The maximum distance (in interpolated positions) a tap gesture can move before it is no longer recognized as a tap	1-255	120
		0x09	Minimum Swipe Velocity	1	The minimum velocity a swipe must maintain to be a swipe gesture. Values below this will either cancel the gesture (if touch removed) or move to the swipe-and-hold state (if touch is still present)	1-50	3
		0x0A	Double Tap Time <7:0>	2	The maximum amount of time allowed between the two taps of a double tap (in ms)	50-1000	350
		0x0B	Double Tap Time <15:8>				
		0x0C	Gesture Edge Keep-out	1	This value determines the width of a keep-out barrier around the edge of the active touch area. This helps remove edge-effect issues.	0-255	128
Configuration	0xF0	0x00	SLP <7:0>	4	Duration (in ms) without touch activity before the controller enters Sleep state	0-4,294,967,295	8000
		0x01	SLP <15:8>				
		0x02	SLP <23:16>				
		0x03	SLP <31:24>				
		0x07	Touch Packet CFG	1	Touch Packet Configuration – Enabled: 0x81, Disabled: 0x01	0x81, 0x01	0x81
		0x09	Gesture Packet CFG	1	Gesture Packet Configuration – Enabled: 0x81, Disabled: 0x01	0x81, 0x01	0x01
		0x0A	Status Packet CFG	1	Status Packet Configuration – Enabled: 0x81, Disabled: 0x01	0x81, 0x01	0x01
I/O Status	0xF1	0x02	TX Short Status <7:0>	2	Identifies which TX pins are shorted after using Manufacturing Test command - read only	0x00-0xFF	0x00
		0x03	TX Short Status <15:8>				
		0x06	RX Short Status <7:0>	2	Identifies which RX pins are shorted after using Manufacturing Test command - read only	0x00-0xFF	0x00
		0x07	RX Short Status <15:8>				

8.0   SPECIAL FEATURES

8.1   Gestures

Single-finger gestures are a fast and intuitive way to navigate a feature-rich human-machine interface. MTCH6301 supports 11 single finger gestures natively, without requiring interaction from the master processor.

Tuning may be required depending on the layout of the sensor, the time duration and length of activation required for your gesture-supported application. The most common defaults are already preloaded and should serve most applications. These parameters and their descriptions are available in the "Gestures" section of the memory map (see **Section 7.0 "Memory Map"**).

> **Note:** Gestures are *not* enabled by default, and must be enabled via the gesture packet configuration byte in RAM (see **Section 7.0 "Memory Map"**).

If your application requires *only* gesture functionality, and does *not* require touch coordinates, the touch packet configuration byte (see **Section 7.0 "Memory Map"**) can be used to turn off all touch coordinate data.

TABLE 8-1:   GESTURE TYPES

Icon	Gesture Type	Icon	Gesture Type
☼	Tap (Click)	☀	Tap and Hold
👆	Double Tap (Double Click)		
⬇	Swipe Down	⬇	Swipe Down and Hold
⬆	Swipe Up	⬆	Swipe Up and Hold
➡	Swipe Right	➡	Swipe Right and Hold
⬅	Swipe Left	⬅	Swipe Left and Hold

MTCH6301

8.2 Sleep

Sleep functionality is enabled by default, and follows the behavior shown in Figure 8-1. This functionality can be modified via the SLP register (see **Section 7.0 "Memory Map"**).

The SLP register is the time (in ms) without touch activity before controller enters Sleep mode.

FIGURE 8-1: **SLEEP FUNCTIONALITY**
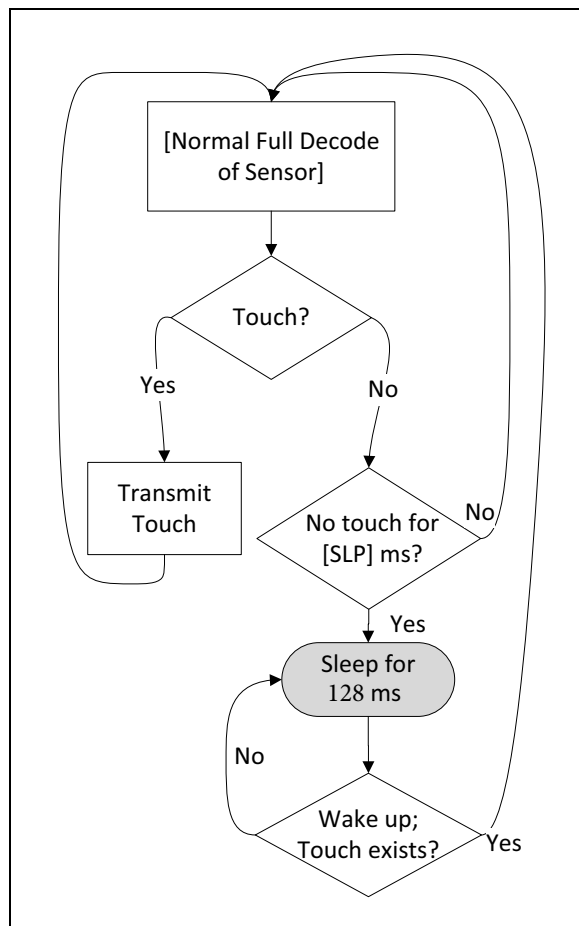

8.3 Nonvolatile RAM (NVRAM)

Permanent storage of parameters that have been modified can be achieved using the internal NVRAM. This NVRAM is *not* meant for continuous writing, as it has a low write-cycle limit of 20,000.

Upon start-up, the NVRAM's data (if present) is loaded into the controller. If no data is available in the NVRAM, the device defaults are loaded instead.

Please note that RAM parameters cannot be individually written to the NVRAM. They are all written with only one command. See the applicable command within the command set for more details. (**Section 6.6 "Full Command Set"**)

8.4 Touch Performance

Using default acquisition parameters, shows the relationship of single-touch report rate with regard to sensor size.

FIGURE 8-2: REPORT RATE VS SENSOR SIZE
MTCH6301

9.0 ELECTRICAL CHARACTERISTICS

This section provides an overview of the MTCH6301 electrical characteristics. Additional information will be provided in future revisions of this document as it becomes available.

9.1 Absolute Maximum Ratings[†]

Ambient temperature under bias .... -40°C to +85°C

Storage temperature .... -65°C to +150°C

Voltage on pins with respect to V_{SS}

    on V_{DD} pin .... -0.3V to +4.0V

    on all other pins .... 0.3V to (V_{DD} + 0.3V)

Maximum current

    out of V_{SS} pin .... 300 mA

    into V_{DD} pin(s) .... 300 mA

    sunk by all ports .... 200 mA

    sourced by all ports .... 200 mA

Maximum output current

    sunk by any I/O pin .... 15 mA

    sourced by any I/O pin .... 15 mA

> **Note:** This device is sensitive to ESD damage and must be handled appropriately. Failure to properly handle and protect the device in an application may cause partial to complete failure of the device.

> † NOTICE: Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure above maximum rating conditions for extended periods may affect device reliability.

9.2 Standard Operating Conditions

The standard operating conditions for any device are defined as:

Operating Voltage: $V_{DDMIN} \leq V_{DD} \leq V_{DDMAX}$

Operating Temperature: $T_{A\_MIN} \leq T_A \leq T_{A\_MAX}$

V_{DD} — Operating Supply Voltage[1]

    MTCH6301

        V_{DDMIN} .... +2.4V

        V_{DDMAX} .... +3.6V

T_A — Operating Ambient Temperature Range

    Industrial Temperature

        T_{A_MIN} .... -40°C

        T_{A_MAX} .... +105°C

> **Note 1:** Maximum current rating requires even load distribution across I/O pins. Maximum current rating may be limited by the device package power dissipation characterizations. See Table 9-1 to calculate device specifications.

9.3 DC Characteristics

TABLE 9-1: THERMAL OPERATING CONDITIONS

Symbol	Rating	Min.	Typ.	Max.	Units
T_J	Operating Junction Temperature Range	-40	—	+125	ºC
T_A	Operating Ambient Temperature Range	-40	—	+85	ºC
P_D	Power Dissipation: Internal Chip Power Dissipation: $\quad P_{INT} = V_{DD} \times (I_{DD} - ? I_{OH})$ I/O Pin Power Dissipation: $\quad P_{I/O} = ? (({V_{DD} - V_{OH}} \times I_{OH}) + ? (V_{OL} \times I_{OL}))$	$P_{INT} + P_{I/O}$			W
P_{DMAX}	Maximum Allowed Power Dissipation	$(T_J - T_A)/\theta_{JA}$			W

TABLE 9-2: THERMAL PACKAGING CHARACTERISTICS

Symbol	Characteristics	Typ.	Max.	Units
θ_{JA}	Package Thermal Resistance, 44-pin QFN	32	—	ºC/W
θ_{JA}	Package Thermal Resistance, 44-pin TQFP	45	—	ºC/W

TABLE 9-3: OPERATING VOLTAGE AND CURRENT

Symbol	Characteristics	Min.	Typ.	Max.	Units	Conditions
V_{DD}	Supply Voltage	2.3	—	3.6	V	—
V_{BOR}	BOR Event on V_{DD} transition high-to-low	2.0	—	2.3	V	—
I_{DD}	Operating Current	—	19	25	mA	**Note 1**
I_{SLP}	Sleep Current	—	200	245	µA	**Note 1, 2**

Note 1: Parameter is characterized, but not tested.
2: Device configured with default parameters.

TABLE 9-4: PIN INPUT AND OUTPUT SPECIFICATIONS

Symbol	Characteristic / Pins	Min.	Max.	Units	Conditions
V_{IL}	**Input Low Voltage**				
	RX, TX	V_{SS}	0.15 V_{DD}	V	—
	SDA, SCL	V_{SS}	0.3 V_{DD}	V	**Note 1**
V_{IH}	**Input High Voltage**				
	RX, TX	0.65 V_{DD}	V_{DD}	V	**Note 1**
	SDA, SCL	0.65 V_{DD}	V_{DD}	V	**Note 1**
V_{OL}	**Output Low Voltage**				
	INT, RX, TX	V_{SS}	0.4	V	$I_{OL} \leq 10$ mA, $V_{DD} = 3.3V$
	SDA, SCL	V_{SS}	0.4	V	$I_{OL} \leq 10$ mA, $V_{DD} = 3.3V$[1,2]
V_{OH}	**Output High Voltage**				
	INT, RX, TX	2.4	V_{DD}	V	$I_{OH} \leq 10$ mA, $V_{DD} = 3.3V$
	SDA, SCL	—	—	V	**Note 2**
V_{BOR}	Brown-out Event on V_{DD} Transition high-to-low	2.0	2.3	V	Min. not tested

Note 1: Parameter is characterized, but not tested.
2: Open drain structure.

9.4 AC Characteristics and Timing Parameters

TABLE 9-5: RESET TIMING

Symbol	Characteristic	Min.	Typ.	Max.	Units	Conditions
T_{PU}	Power-up Period	—	400	—	µs	Notes 1, 2
T_{BOR}	Brown-out Pulse Width (Low)	—	1	—	µs	Note 1

Note 1: Parameter is characterized, but not tested.

2: Power-up period is for core operation to begin and it does not reflect response time to a touch.

FIGURE 9-1: I²C™ BUS START/STOP BIT TIMING CHARACTERISTICS

APPENDIX A: DATA SHEET REVISION HISTORY

Revision A (2012)

Initial release of the document.

Revision B (03/2014)

Updated the Device Overview page; Added Chapter 4; Updated Chapters 1 through 9 and Chapter 11; Other minor corrections.

MTCH6301

THE MICROCHIP WEB SITE

Microchip provides online support via our WWW site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at www.microchip.com. Under "Support", click on "Customer Change Notification" and follow the registration instructions.

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or Field Application Engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: http://microchip.com/support

Note the following details of the code protection feature on Microchip devices:

• Microchip products meet the specification contained in their particular Microchip Data Sheet.

• Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.

• There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.

• Microchip is willing to work with the customer who is concerned about the integrity of their code.

• Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
