

## Connection Diagram

## Block Diagram

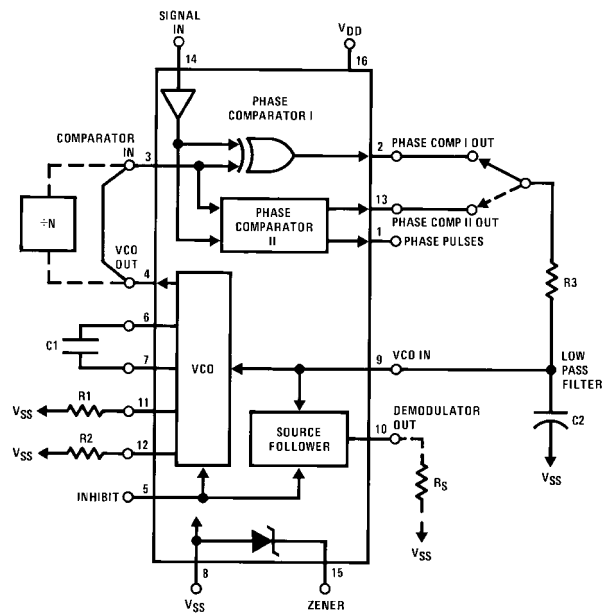

FIGURE 1.

**Absolute Maximum Ratings**(Note 1)

(Note 2)

|                                     |                               |
|-------------------------------------|-------------------------------|
| DC Supply Voltage ( $V_{DD}$ )      | -0.5 to +18 $V_{DC}$          |
| Input Voltage ( $V_{IN}$ )          | -0.5 to $V_{DD} + 0.5 V_{DC}$ |
| Storage Temperature Range ( $T_S$ ) | -65°C to +150°C               |
| Power Dissipation ( $P_D$ )         |                               |
| Dual-In-Line                        | 700 mW                        |
| Small Outline                       | 500 mW                        |
| Lead Temperature ( $T_L$ )          |                               |
| (Soldering, 10 seconds)             | 260°C                         |

**Recommended Operating Conditions** (Note 2)

|                                       |                      |
|---------------------------------------|----------------------|
| DC Supply Voltage ( $V_{DD}$ )        | 3 to 15 $V_{DC}$     |
| Input Voltage ( $V_{IN}$ )            | 0 to $V_{DD} V_{DC}$ |
| Operating Temperature Range ( $T_A$ ) | -55°C to +125°C      |

**Note 1:** "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The table of "Recommended Operating Conditions" and "Electrical Characteristics" provides conditions for actual device operation.

**Note 2:**  $V_{SS} = 0V$  unless otherwise specified.

**DC Electrical Characteristics** (Note 2)

| Symbol   | Parameter   | Conditions   | -55°C |      | +25°C |            |      | +125°C |      | Units   |

FIGURE 10.

**Note:** To obtain approximate total power dissipation of PLL system for no-signal input: Phase Comparator I,  $P_D (\text{Total}) = P_D (f_o) + P_D (f_{\text{MIN}}) + P_D (R_S)$ ; Phase Comparator II,  $P_D (\text{Total}) = P_D (f_{\text{MIN}})$ .

# Typical Performance Characteristics (Continued)

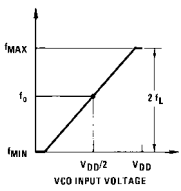

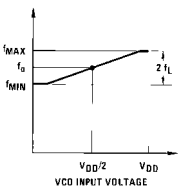

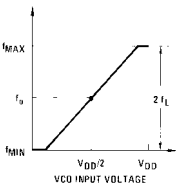

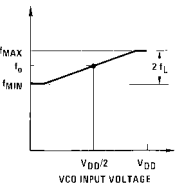

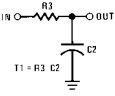

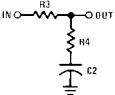

**FIGURE 11. Typical VCO Linearity vs R1 and C1**

**Note:** To obtain approximate total power dissipation of PLL system for no-signal input: Phase Comparator I,  $P_D (\text{Total}) = P_D (f_0) + P_D (f_{\text{MIN}}) + P_D (R_S)$ ; Phase Comparator II,  $P_D (\text{Total}) = P_D (f_{\text{MIN}})$ .

## Design Information

This information is a guide for approximating the value of external components for the CD4046B in a phase-locked-loop system. The selected external components must be within the following ranges:  $R_1, R_2 \geq 10 \text{ k}\Omega$ ,  $R_S \geq 10 \text{ k}\Omega$ ,  $C_1 \geq 50 \text{ pF}$ .

In addition to the given design information, refer to Figure 5, Figure 6, Figure 7 for  $R_1$ ,  $R_2$  and  $C_1$  component selections.

| Characteristics                           | Using Phase Comparator I  |   | Using Phase Comparator II  |   |
|---|---|---|--|---|
|   | VCO Without Offset<br>R2 = ∞  | VCO With Offset   | VCO Without Offset<br>R2 = ∞   | VCO With Offset   |
| VCO Frequency                             |    |  |  |  |
| For No Signal Input                       | VCO in PLL system will adjust to center frequency, f <sub>0</sub>   |   | VCO in PLL system will adjust to lowest operating frequency, f <sub>min</sub>      |   |
| Frequency Lock Range, 2 f <sub>L</sub>    | 2 f <sub>L</sub> = full VCO frequency range<br>2 f <sub>L</sub> = f <sub>max</sub> - f <sub>min</sub>   |   |  |   |
| Frequency Capture Range, 2 f <sub>C</sub> |  $2 f_C \approx \frac{1}{\pi} \sqrt{\frac{2 \pi f_L}{\tau_1}}$ |   | $f_C = f_L$  |   |
| Loop Filter Component Selection           |  <p>For 2 f<sub>C</sub>, see Ref.</p>                        |   |  |   |
| Phase Angle Between Single and Comparator | 90° at center frequency (f <sub>0</sub> ), approximating 0° and 180° at ends of lock range (2 f <sub>L</sub> )                                  |   | Always 0° in lock  |   |
| Locks on Harmonics of Center Frequency    | Yes   |   | No   |   |
| Signal Input Noise Rejection              | High  |   | Low  |   |

### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
