1. Open Circuit Inductance Test Parameters: 100 kHz, 0.25 V_{rms}, 0.0 Adc.
2. RMS current for an approximate DT of 40 °C without core loss.
   It is recommended that the temperature of the part not exceed +125 °C.
3. Peak current for approximate 30% roll off at +20 °C.
4. DCR limits @ +20 °C.
5. Applied Volt-Time product (V-µs) across the inductor. This value represent the applied V-µsec 100 kHz necessary to generate a core loss equal to 10% of the total losses for 40 °C temperature rise.
6. Part number definition: DRxxx-yyy-R
   - DRxxx = product code and size,
   - yyy = inductance value in µH,
   - R = decimal point. If no R is present, third character = # of zeros
   - "-R" suffix = RoHS compliant
