Specifications

Absolute Maximum Ratings at Ta = 25°C, V_{SS} = 0 V

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V_{DD} max	V_{DD}	−0.3 to +4.2	V
	V_{LCD} max	V_{LCD}	−0.3 to +6.5	
Input voltage	$V_{IN}1$	CE, CL, DI, $\overline{INH}$	−0.3 to +4.2	V
	$V_{IN}2$	OSCI : External clock operating mode	−0.3 to V_{DD}+0.3	
Output voltage	V_{OUT}	S1 to S37, COM1 to COM4, P1 to P12	−0.3 to V_{LCD}+0.3	V
Output current	$I_{OUT}1$	S1 to S36	300	μA
	$I_{OUT}2$	COM1 to COM4, S37	3	mA
	$I_{OUT}3$	P1 to P12 *1	5	
Allowable power dissipation	Pd max	Ta = 85°C	100	mW
Operating temperature	Topr		−40 to +85	°C
Storage temperature	Tstg		−55 to +125	°C

Note : *1 The sum of output current through P1 to P12 must be 40 mA or less.

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

Allowable Operating Ranges at Ta = −40 to +85°C, V_{SS} = 0 V

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Supply voltage	V_{DD}	V_{DD}	2.7		3.6	V
	V_{LCD}	V_{LCD}: Internal oscillator operating mode	2.7		5.5	
		V_{LCD}: External clock operating mode	V_{DD}		5.5	
Input high-level voltage	$V_{IH}1$	CE, CL, DI, $\overline{INH}$	0.7V_{DD}		3.6	V
	$V_{IH}2$	OSCI: External clock operating mode	0.7V_{DD}		V_{DD}	
Input low-level voltage	$V_{IL}1$	CE, CL, DI, $\overline{INH}$	0		0.2V_{DD}	V
	$V_{IL}2$	OSCI: External clock operating mode	0		0.2V_{DD}	
External clock operating frequency	f_{CK}	OSCI: External clock operating mode [Figure 3]	10	38	600	kHz
External clock duty cycle	D_{CK}	OSCI: External clock operating mode [Figure 3]	30	50	70	%
Data setup time	tds	CL, DI [Figure 1], [Figure 2]	160			ns
Data hold time	tdh	CL, DI [Figure 1], [Figure 2]	160			ns
CE wait time	tcp	CE, CL [Figure 1], [Figure 2]	160			ns
CE setup time	tcs	CE, CL [Figure 1], [Figure 2]	160			ns

Continued from preceding page.

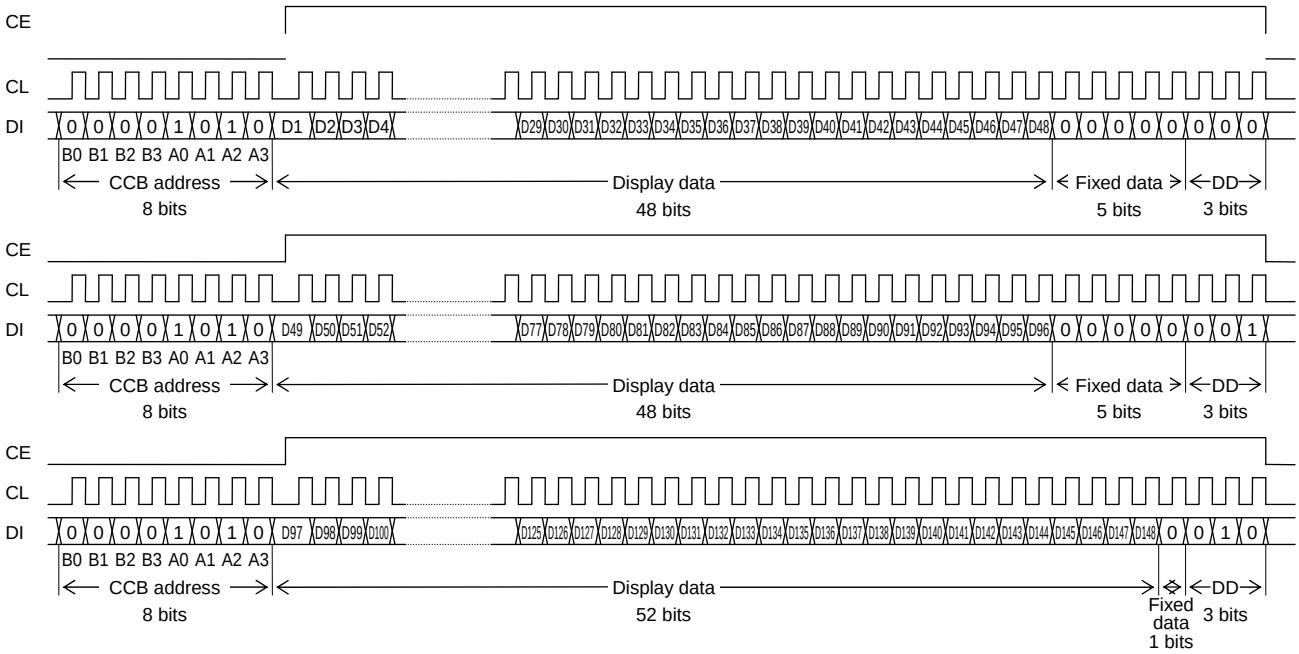
Symbol	Pin No.	Function	Active	I/O	Handling when unused
$\overline{INH}$	45	Display off control input • $\overline{INH}$ = low (V_{SS}) ...Display forced off S1/P1 to S12/P12=low (V_{SS}) (These pins are forcibly set to the general-purpose output port function and held at the V_{SS} level.) S13 to S36=low (V_{SS}) COM1 to COM4=low (V_{SS}) S37/OSCI=low (V_{SS}) (This pin is forcibly set to the segment output port function and held at the V_{SS} level.) LCD drive bias voltage stabilization circuit stopped. Stops the internal oscillator. Inhibits external clock input. • $\overline{INH}$ = high (V_{DD}) ...Display on LCD drive bias voltage stabilization circuit is enabled. Enables the internal oscillator circuit. (Internal oscillator operating mode) Enables external clock input. (External clock operating mode) However, serial data transfer is possible when the display is forced off.	L	I	GND
V_{DD}	42	Logic block power supply pin. A power voltage of 2.7 to 3.6 V must be applied to this pin.	-	-	-
V_{LCD}	43	LCD driver block power supply pin. A power voltage of 2.7 to 5.5 V must be applied to this pin.	-	-	-
V_{SS}	44	Ground pin. Must be connected to ground.	-	-	-

Serial Data Input

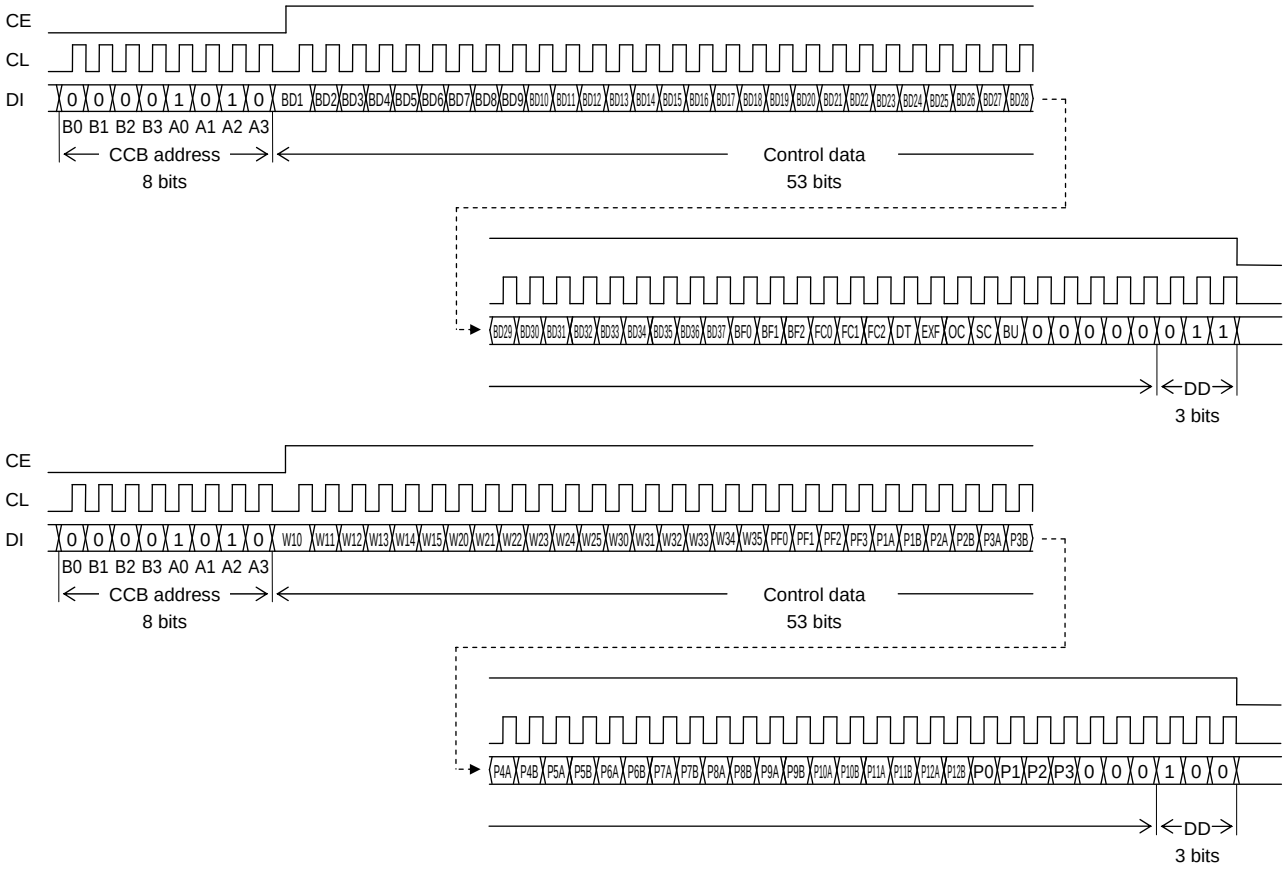
1. 1/4 duty drive

(1) When CL is stopped at the low level

• Display data Input



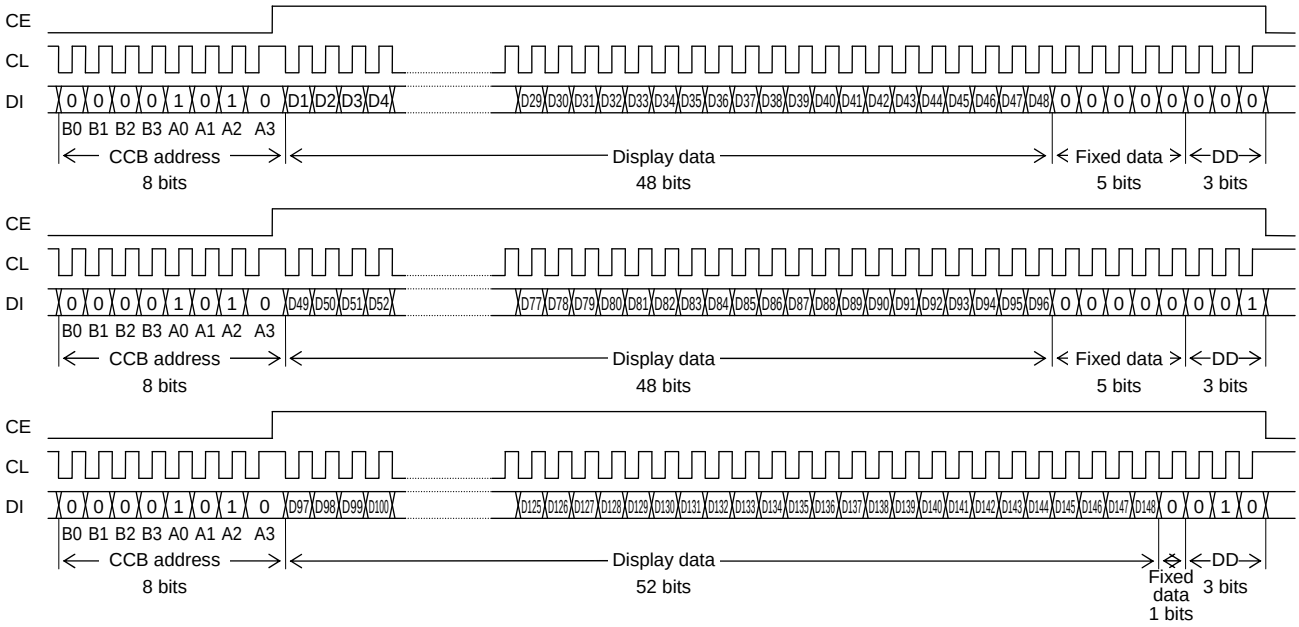
• Control data Input



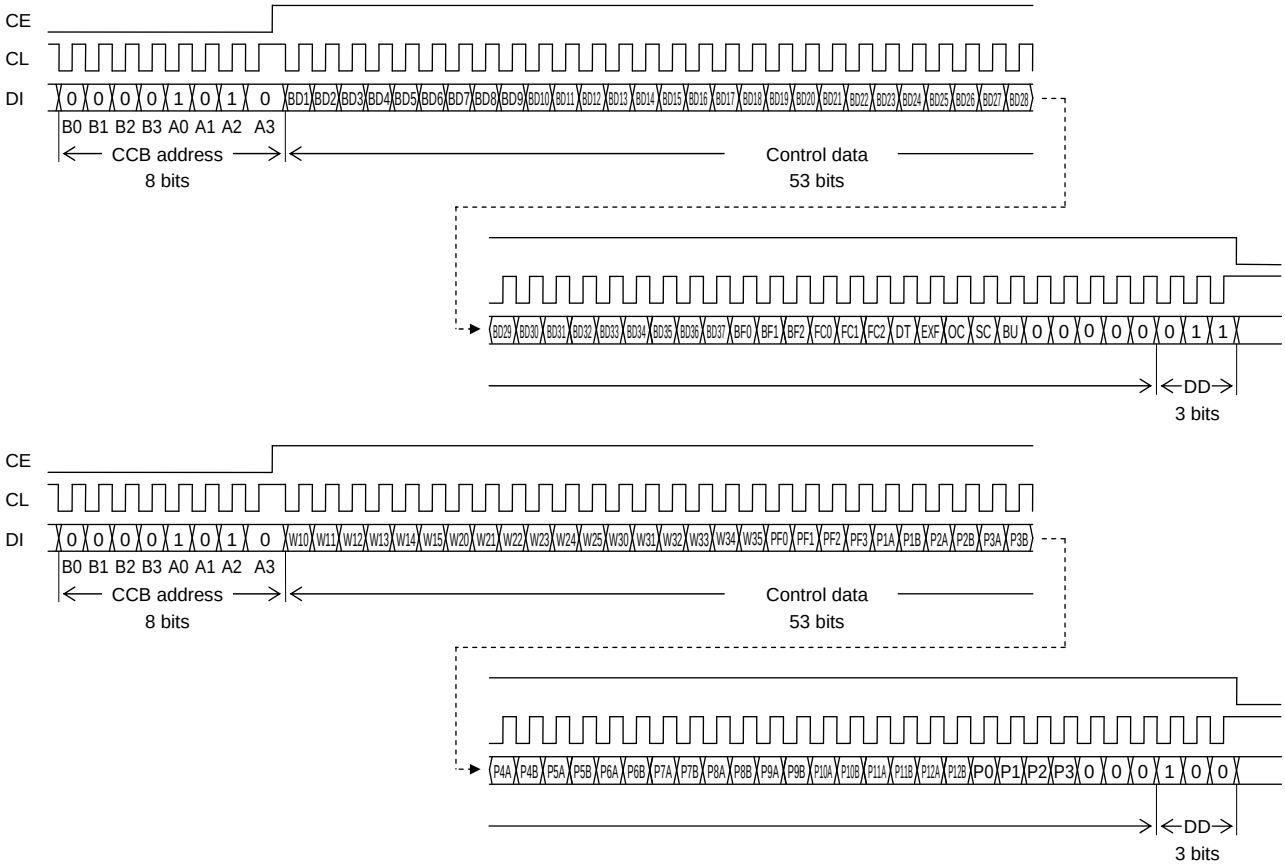
Note: DD is the direction data.

(2) When CL is stopped at the high level

• Display data Input



• Control data Input



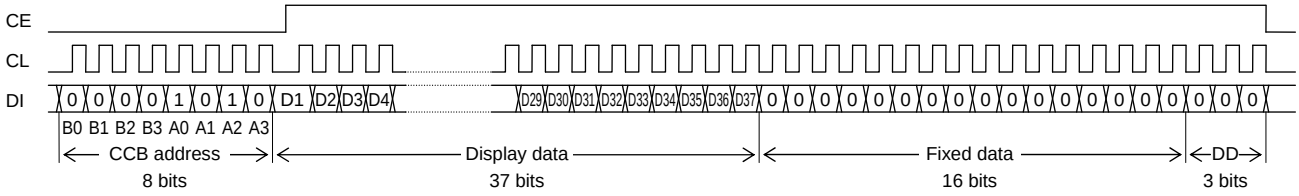
Note: DD is the direction data.

- CCB address ..... “50H”
- D1 to D148 ..... Display data
- BD1 to BD37 ..... Display blinking control data of each segment output pin
- BF0 to BF2 ..... Segment blinking frequency setting control data
- FC0 to FC2 ..... Common/segment output waveform frame frequency setting control data
- DT ..... 1/4-duty 1/3-bias drive or static drive switching control data
- EXF ..... External clock operating frequency setting control data
- OC ..... Internal oscillator operating mode/external clock operating mode switching control data
- SC ..... Segment on/off control data
- BU ..... Normal mode/power-saving mode control data
- W10 to W15, W20 to W25,... PWM data of the PWM output
  W30 to W35
- PF0 to PF3 ..... PWM output waveform frame frequency setting control data
- P1A, P1B to P12A, P12B ..... General-purpose output function/PWM output function switiching control data of the general-purpose output port
- P0 to P3 ..... Segment output port/general-purpose output port switching control data

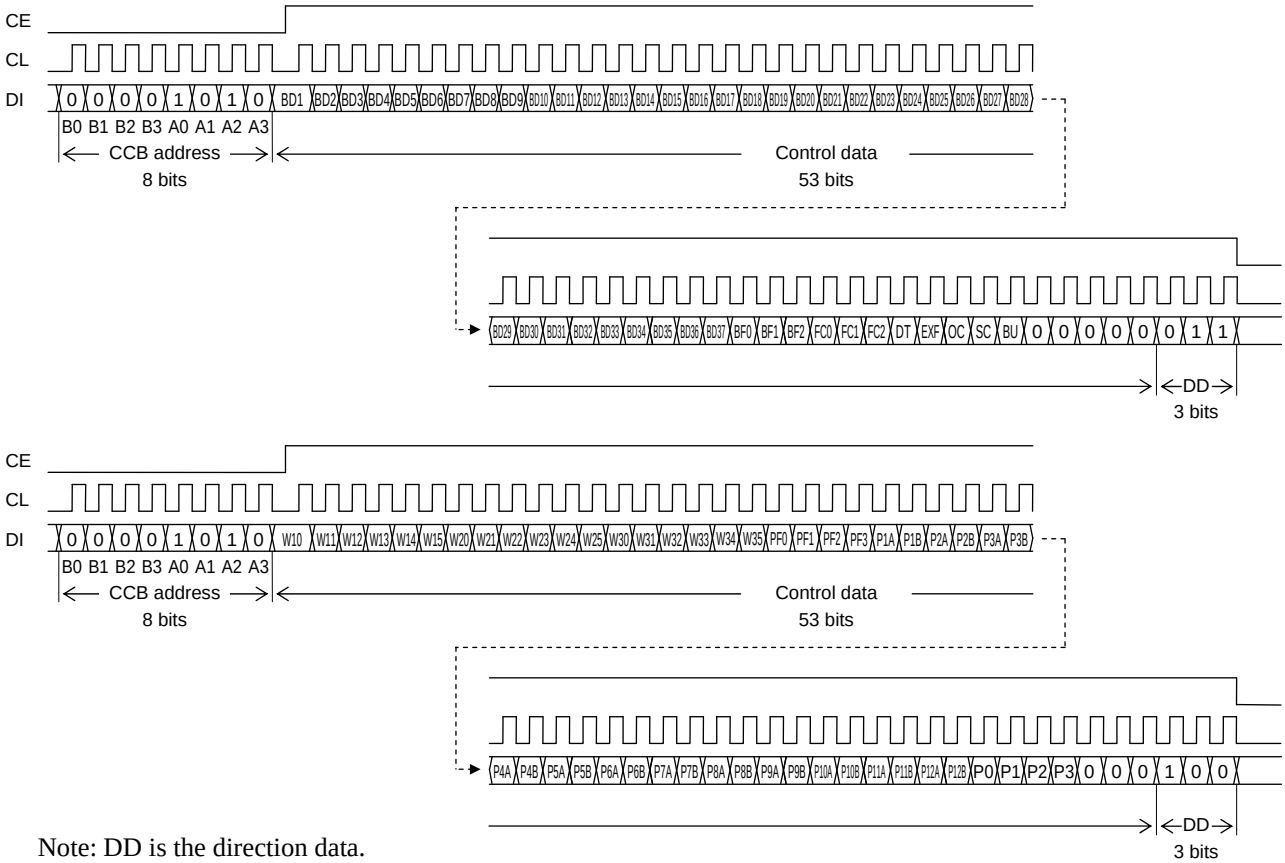
2. Static drive

(1) When CL is stopped at the low level

• Display data Input



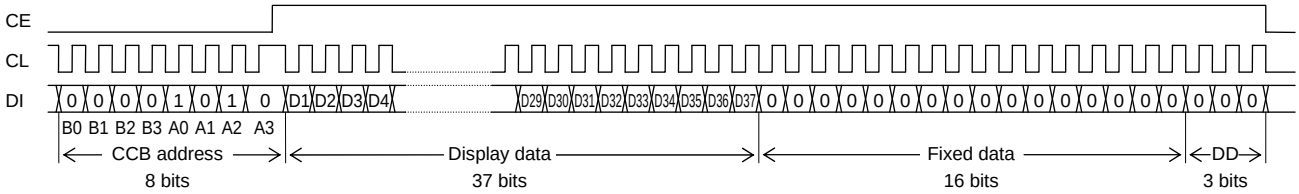
• Control data Input



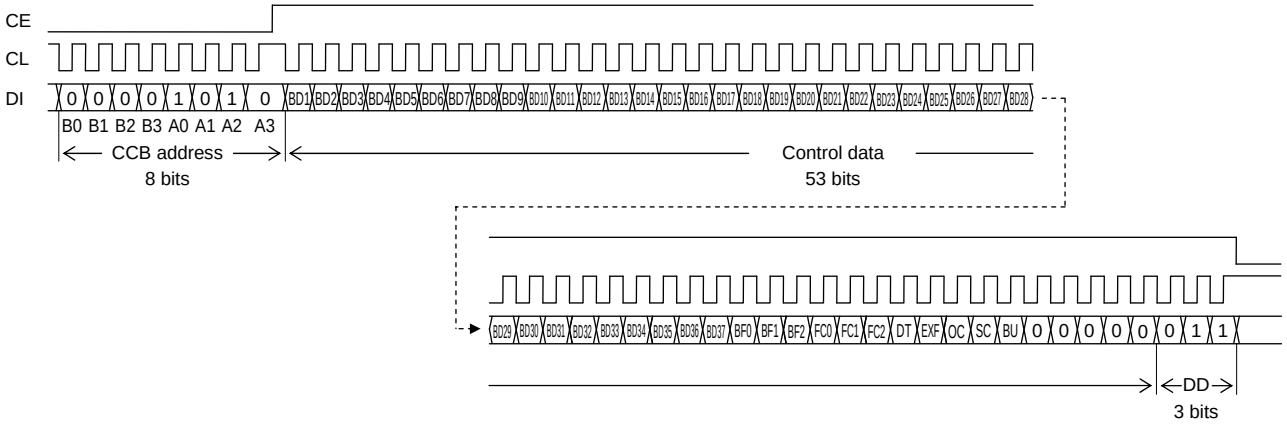
Note: DD is the direction data.

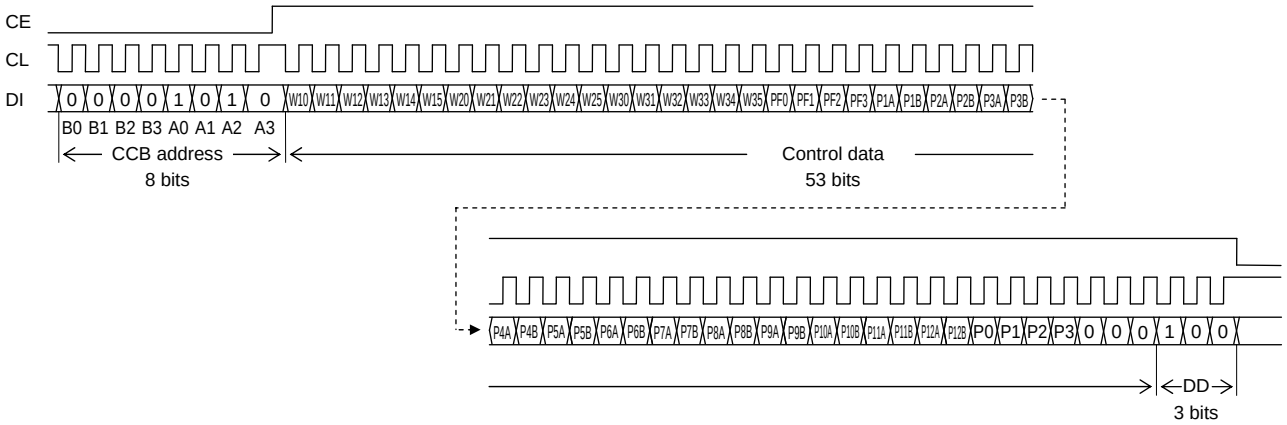
(2) When CL is stopped at the high level

• Display data Input



• Control data Input





Note: DD is the direction data.

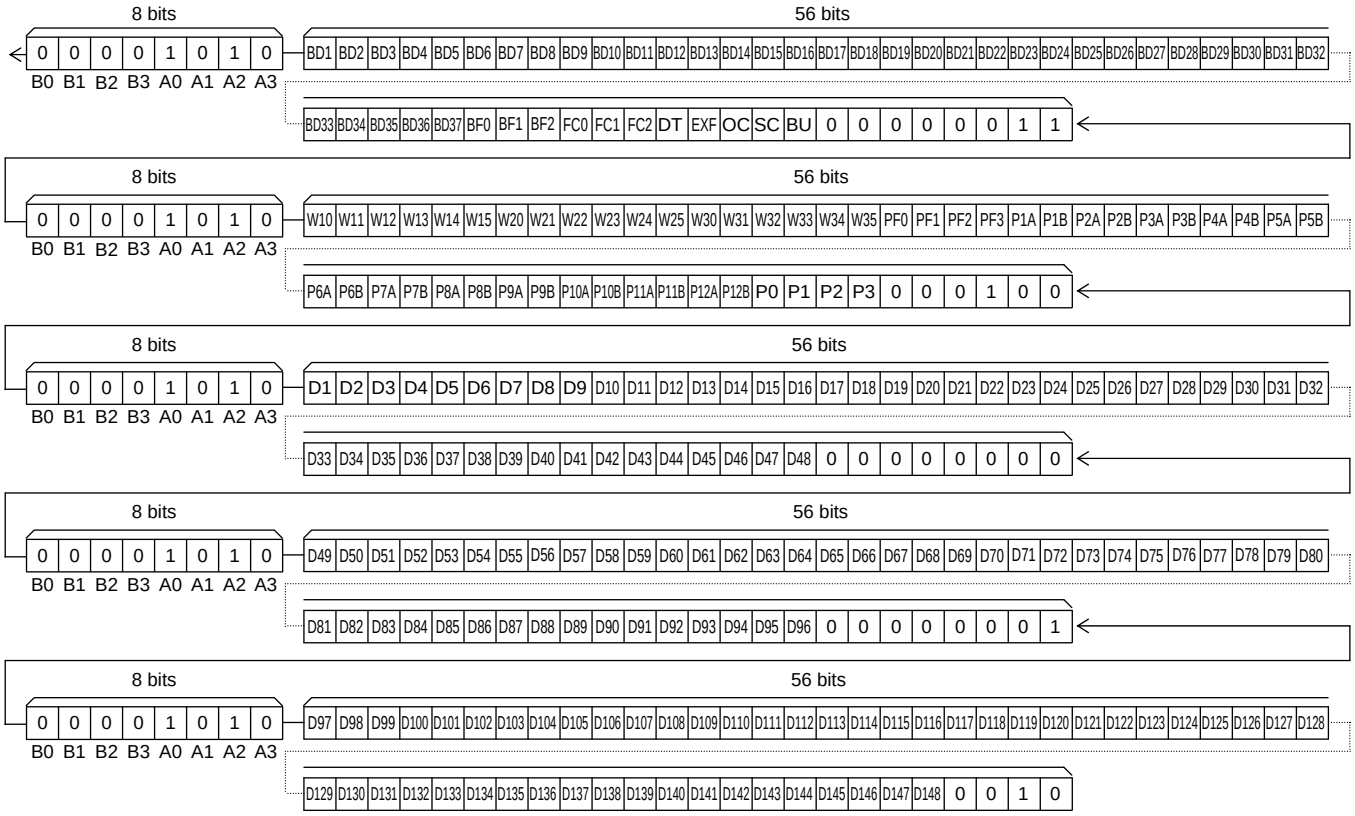
- CCB address ..... "50H"
- D1 to D37 ..... Display data
- BD1 to BD37 ..... Display blinking control data of each segment output pin
- BF0 to BF2 ..... Segment blinking frequency setting control data
- FC0 to FC2 ..... Common/segment output waveform frame frequency setting control data
- DT ..... 1/4-duty 1/3-bias drive or static drive switching control data
- EXF ..... External clock operating frequency setting control data
- OC ..... Internal oscillator operating mode/external clock operating mode switching control data
- SC ..... Segment on/off control data
- BU ..... Normal mode/power-saving mode control data
- W10 to W15, W20 to W25,... PWM data of the PWM output
  W30 to W35
- PF0 to PF3 ..... PWM output waveform frame frequency setting control data
- P1A, P1B to P12A, P12B ..... General-purpose output function/PWM output function switiching control data of the general-purpose output port
- P0 to P3 ..... Segment output port/general-purpose output port switching control data

Serial Data Transfer Example

1. 1/4 duty drive

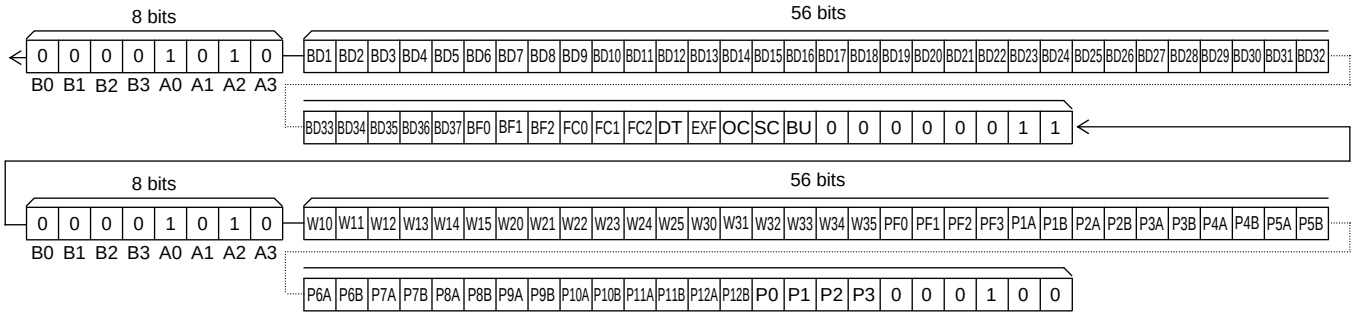
• When 97 or more segments are used

All 320 bits of serial data (including CCB address) must be sent.



• When fewer than 97 segments are used

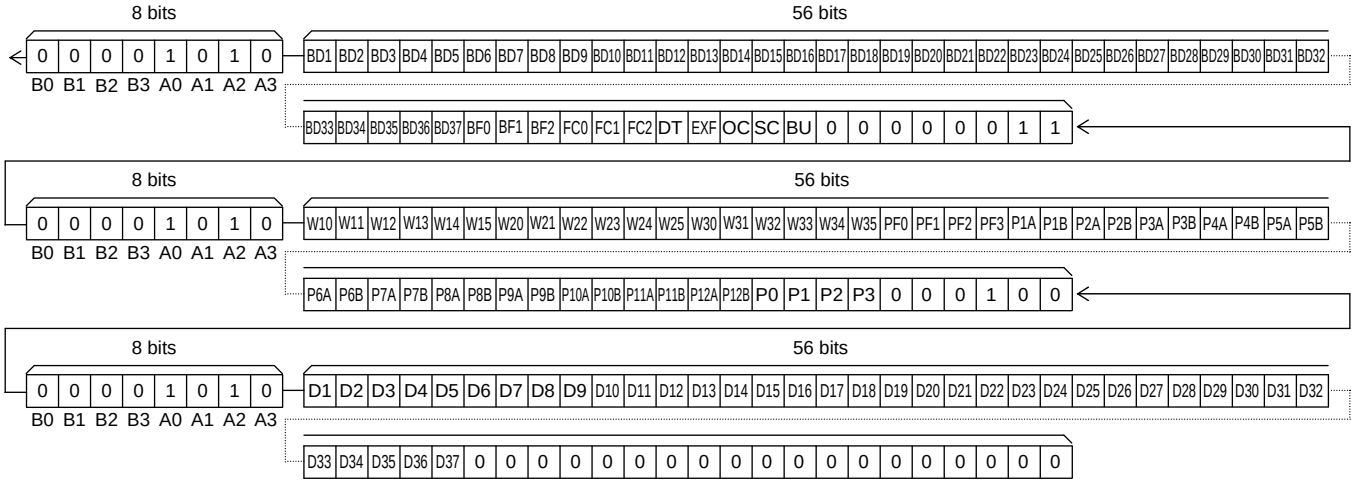
Depending on the number of segments used, 192 bits or 256 bits (including CCB address) must be sent as serial data. However, the serial data (control data) shown in the figure below must be sent without fail.



Note : After the above serial data is sent, the contents of the display data can be changed by transferring only the serial data (CCB address, display data, fixed data, and direction data) including the display data to be changed in 64-bit units.

2. Static drive

• All 192 bits of serial data (including CCB address) must be sent.



Control Data Functions

(1) BD1 to BD37 … Display blinking control data of each segment output pin

These control data bits are used to set the display segment blinking corresponding to each segment output pin.

BDn	Display segment blinking states of segment output pin Sn
0	The display segments are not blinked.
1	The display segments corresponding to the segment output pin Sn that the contents of display data are "1" are blinked.

Note: The BDn (n=1 to 37) are the control data setting the blinking state of the display segments for segment output pins Sn (n=1 to 37).

For example, the display state of segment output pin S21 becomes as follows when the contents of display data are (D81, D82, D83, D84) = (1, 0, 1, 0) in 1/4 duty drive

BD21	Display data				Display states of segment output pin S21			
	D81	D82	D83	D84	COM1	COM2	COM3	COM4
0	1	0	1	0	on	off	on	off
1	1	0	1	0	blink	off	blink	off

(2) BF0 to BF2 … Segment blinking frequency setting control data

These control data bits are used to set the display segment blinking frequency

Control data			Segment blinking frequency fb[Hz]		
BF0	BF1	BF2	Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 0, $f_{CK}1$=300[kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 1, $f_{CK}2$=38[kHz]typ)
0	0	0	fosc/600000	$f_{CK}1$/600000	$f_{CK}2$/75000
1	0	0	fosc/360000	$f_{CK}1$/360000	$f_{CK}2$/45000
0	1	0	fosc/300000	$f_{CK}1$/300000	$f_{CK}2$/37500
1	1	0	fosc/240000	$f_{CK}1$/240000	$f_{CK}2$/30000
0	0	1	fosc/180000	$f_{CK}1$/180000	$f_{CK}2$/22500
1	0	1	fosc/150000	$f_{CK}1$/150000	$f_{CK}2$/18750
0	1	1	fosc/120000	$f_{CK}1$/120000	$f_{CK}2$/15000
1	1	1	fosc/100000	$f_{CK}1$/100000	$f_{CK}2$/12500

(3) FC0 to FC2 … Common/segment output waveform frame frequency setting control data

These control data bits set the frame frequency of the common and segment output waveforms.

Control data			Common/segment output waveform frame frequency fo[Hz]		
FC0	FC1	FC2	Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 0, $f_{CK}1$=300[kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 1, $f_{CK}2$=38[kHz]typ)
0	0	0	fosc/4608	$f_{CK}1$/4608	$f_{CK}2$/576
0	0	1	fosc/3456	$f_{CK}1$/3456	$f_{CK}2$/432
0	1	0	fosc/3072	$f_{CK}1$/3072	$f_{CK}2$/384
0	1	1	fosc/2304	$f_{CK}1$/2304	$f_{CK}2$/288
1	0	0	fosc/1536	$f_{CK}1$/1536	$f_{CK}2$/192
1	0	1	fosc/1152	$f_{CK}1$/1152	$f_{CK}2$/144
1	1	0	fosc/768	$f_{CK}1$/768	$f_{CK}2$/96

Note: When is setting (FC0, FC1, FC2)=(1, 1, 1), the frame frequency is same as frame frequency at the time of the (FC0, FC1, FC2)=(0, 1, 0) setting (fosc/3072, $f_{CK}1$/3072, $f_{CK}2$/384).

(4) DT … 1/4-duty 1/3-bias drive or static drive switching control data

This control data bit selects either 1/4-duty 1/3-bias drive or static drive.

DT	Drive scheme	Common output pins states		
		COM2	COM3	COM4
0	1/4 duty 1/3 bias drive	COM2	COM3	COM4
1	Static drive	"L" (V_{SS})	"L" (V_{SS})	"L" (V_{SS})

Note: COM2, COM3, COM4 : Common output

"L" (V_{SS}) : "L" (V_{SS}) level output

(5) EXF … External clock operating frequency setting control data

This control data bit sets the operating frequency of the external clock which input into the OSCI pin, when the external clock operating mode (OC = "1") is set. However, this control data is effective only when external clock operating mode (OC = "1") is set.

EXF	External clock operating frequency f_{CK}[kHz]
0	$f_{CK}1$=300[kHz]typ
1	$f_{CK}2$=38[kHz]typ

(6) OC … Internal oscillator operating mode/external clock operating mode switching control data

This control data bit selects either the internal oscillator operating mode or external clock operating mode.

OC	Fundamental clock operating mode	I/O pin (S37/OSCI) state
0	Internal oscillator operating mode	S37
1	External clock operating mode	OSCI

Note: S37: Segment output

OSCI: External clock input

(7) SC … Segment on/off control data

This control data bit controls the on/off state of the segments.

SC	Display state
0	On
1	Off

Note that when the segments are turned off by setting SC to 1, the segments are turned off by outputting segment off waveforms from the segment output pins.

(8) BU … Normal mode/power-saving mode control data

This control data bit selects either normal mode or power-saving mode.

BU	Mode
0	Normal mode
1	Power saving mode In this mode, the internal oscillator circuit stops oscillation (the S37/OSCI pin is configured for segment output) if the IC is in the internal oscillator operating mode (OC=0) and the IC stops receiving external clock signals (the S37/OSCI pin is configured for external clock input) if the IC is in the external clock operating mode (OC=1). In addition, the common and segment output pins go to the V_{SS} level and the operation of LCD drive bias voltage stabilization circuit stops. However, the S1/P1 to S12/P12 output pins can be used as general-purpose output ports under the control of the data bits P0 to P3. (The general-purpose output port P1 to P12 can not be used as PWM output).

(9) W10 to W15, W20 to W25, W30 to W35 … PWM data of the PWM output

These control data bits set the pulse width of the PWM output P1 to P12. However, when the PWM output function isn't used, these control data bits become invalid. In addition, when the external clock operating frequency is set the $f_{CK}2$ = 38[kHz]typ (EXF="1") in external clock operating mode (OC = "1"), these control data bits become invalid.

Wn0	Wn1	Wn2	Wn3	Wn4	Wn5	Pulse width of PWM output

0	1	0	1	1	1	(59/64)×Tp
1	1	0	1	1	1	(60/64)×Tp
0	0	1	1	1	1	(61/64)×Tp
1	0	1	1	1	1	(62/64)×Tp
0	1	1	1	1	1	(63/64)×Tp
1	1	1	1	1	1	(64/64)×Tp

Note: W10 to W15 … PWM data of the PWM output (Ch1)
W20 to W25 … PWM data of the PWM output (Ch2)
W30 to W35 … PWM data of the PWM output (Ch3)

$$Tp = \frac{1}{fp}$$

(10) PF0 to PF3 … PWM output waveform frame frequency setting control data

These control data bits set the frame frequency of the PWM output waveforms. However, when the PWM output function isn't used, these control data bits become invalid. In addition, when the external clock operating frequency is set the $f_{CK}2$ = 38[kHz]typ (EXF="1") in external clock operating mode (OC = "1"), these control data bits become invalid.

Control data				PWM output waveform frame frequency fp[Hz]	
PF0	PF1	PF2	PF3	Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz] typ)	External clock operating mode (The control data OC is 1 and EXF is 0, $f_{CK}1$=300[kHz] typ)
0	0	0	0	fosc/1536	$f_{CK}1$/1536
1	0	0	0	fosc/1408	$f_{CK}1$/1408
0	1	0	0	fosc/1280	$f_{CK}1$/1280
1	1	0	0	fosc/1152	$f_{CK}1$/1152
0	0	1	0	fosc/1024	$f_{CK}1$/1024
1	0	1	0	fosc/896	$f_{CK}1$/896
0	1	1	0	fosc/768	$f_{CK}1$/768
1	1	1	0	fosc/640	$f_{CK}1$/640
0	0	0	1	fosc/512	$f_{CK}1$/512
1	0	0	1	fosc/384	$f_{CK}1$/384
0	1	0	1	fosc/256	$f_{CK}1$/256

Note: When are setting (PF0, PF1, PF2, PF3)=(1, 1, 0, 1) and (X, X, 1, 1), the frame frequency is same as frame frequency at the time of the (PF0, PF1, PF2, PF3)=(1, 0, 1, 0) setting (fosc/896, $f_{CK}1$/896).

X: don't care

(11) P1A, P1B to P12A, P12B … General-purpose output function/PWM output function switiching control data of the general-purpose output port

These control data bits set the general-purpose output function (High or low level output) or PWM output function of the general-purpose output ports P1 to P12. However, when the S1/P1 to S12/P12 output pins arn't set the general-purpose output port, these control data bits become invalid. In addition, be careful of being unable to set a PWM output function when the external clock operating frequency is set the $f_{CK}2$ = 38[kHz]typ (EXF="1") in external clock operating mode (OC = "1").

PnA	PnB	Functions of the general-purpose output port (Pn)
0	0	General-purpose output function (High or low level output)
1	0	PWM output function (Ch1)
0	1	PWM output function (Ch2)
1	1	PWM output function (Ch3)

Note: The data PnA, PnB (n=1 to 12) are the control data switching the general-purpose output function or PWM output function of the general-purpose output ports P1 to p12. For example, if the S10/P10 output pin is set the general-purpose output port, the general-purpose output port P10 pin is selected the PWM output function (Ch1) when (P10A, P10B) = (1, 0).

(12) P0 to P3 … Segment output port/general-purpose output port switching control data

These control data bits switch the segment output port/general-purpose output port functions of the S1/P1 to S12/P12 output pins.

Control data				Output pin state											
P0	P1	P2	P3	S1/P1	S2/P2	S3/P3	S4/P4	S5/P5	S6/P6	S7/P7	S8/P8	S9/P9	S10/P10	S11/P11	S12/P12
0	0	0	0	S1	S2	S3	S4	S5	S6	S7	S8	S9	S10	S11	S12
0	0	0	1	P1	S2	S3	S4	S5	S6	S7	S8	S9	S10	S11	S12
0	0	1	0	P1	P2	S3	S4	S5	S6	S7	S8	S9	S10	S11	S12
0	0	1	1	P1	P2	P3	S4	S5	S6	S7	S8	S9	S10	S11	S12
0	1	0	0	P1	P2	P3	P4	S5	S6	S7	S8	S9	S10	S11	S12
0	1	0	1	P1	P2	P3	P4	P5	S6	S7	S8	S9	S10	S11	S12
0	1	1	0	P1	P2	P3	P4	P5	P6	S7	S8	S9	S10	S11	S12
0	1	1	1	P1	P2	P3	P4	P5	P6	P7	S8	S9	S10	S11	S12
1	0	0	0	P1	P2	P3	P4	P5	P6	P7	P8	S9	S10	S11	S12
1	0	0	1	P1	P2	P3	P4	P5	P6	P7	P8	P9	S10	S11	S12
1	0	1	0	P1	P2	P3	P4	P5	P6	P7	P8	P9	P10	S11	S12
1	0	1	1	P1	P2	P3	P4	P5	P6	P7	P8	P9	P10	P11	S12
1	1	0	0	P1	P2	P3	P4	P5	P6	P7	P8	P9	P10	P11	P12

Note1: Sn (n=1 to 12)…Segment output port Pn (n=1 to 12)…General-purpose output port

Note2: When are setting (P0, P1, P2, P3)=(1, 1, 0, 1), (1, 1, 1, 0) and (1, 1, 1, 1), the all S1/P1 to S12/P12 output pins are selected the segment output port.

The table below lists the correspondence between the display data and the output pins when these pins are selected to be general-purpose output ports (general-purpose output function).

Output pin	Correspondence display data	
	1/4 duty drive	Static drive
S1/P1	D1	D1
S2/P2	D5	D2
S3/P3	D9	D3
S4/P4	D13	D4
S5/P5	D17	D5
S6/P6	D21	D6
S7/P7	D25	D7
S8/P8	D29	D8
S9/P9	D33	D9
S10/P10	D37	D10
S11/P11	D41	D11
S12/P12	D45	D12

For example, if the circuit is operated in 1/4 duty and the S4/P4 output pin is selected to be a general-purpose output port and is set general-purpose output function, the S4/P4 output pin will output a high (V_{LCD}) level when the display data D13 is 1, and will output a low (V_{SS}) level when D13 is 0.

S36	D141	D142	D143	D144	BD36
S37/OSCI	D145	D146	D147	D148	BD37

Note: This table assumes that pins S1/P1 to S12/P12 and S37/OSCI are configured for segment output.

For example, the table below lists the output states for the S21 output pin.

Display data				Blinking control data	Output pin (S21) state
D81	D82	D83	D84	BD21	
0	0	0	0	0	The LCD segments corresponding to COM1, COM2, COM3, and COM4 are off.
0	0	0	1	0	The LCD segment corresponding to COM4 is on.
0	0	1	0	0	The LCD segment corresponding to COM3 is on.
0	0	1	1	0	The LCD segments corresponding to COM3 and COM4 are on.
0	1	0	0	0	The LCD segment corresponding to COM2 is on.
0	1	0	1	0	The LCD segments corresponding to COM2 and COM4 are on.
0	1	1	0	0	The LCD segments corresponding to COM2 and COM3 are on.
0	1	1	1	0	The LCD segments corresponding to COM2, COM3, and COM4 are on.
1	0	0	0	0	The LCD segment corresponding to COM1 is on.
1	0	0	1	0	The LCD segments corresponding to COM1 and COM4 are on.
1	0	1	0	0	The LCD segments corresponding to COM1 and COM3 are on.
1	0	1	1	0	The LCD segments corresponding to COM1, COM3, and COM4 are on.
1	1	0	0	0	The LCD segments corresponding to COM1 and COM2 are on.
1	1	0	1	0	The LCD segments corresponding to COM1, COM2, and COM4 are on.
1	1	1	0	0	The LCD segments corresponding to COM1, COM2, and COM3 are on.
1	1	1	1	0	The LCD segments corresponding to COM1, COM2, COM3, and COM4 are on.
0	0	0	0	1	The LCD segments corresponding to COM1, COM2, COM3, and COM4 are off.
0	1	0	1	1	The LCD segments corresponding to COM2 and COM4 are blinking.
1	0	1	0	1	The LCD segments corresponding to COM1 and COM3 are blinking.
1	1	1	1	1	The LCD segments corresponding to COM1, COM2, COM3, and COM4 are blinking.

Display Data and Display Blinking Control Data and Output Pin Correspondence (Static Drive)

Output pin	COM1	Blinking control data

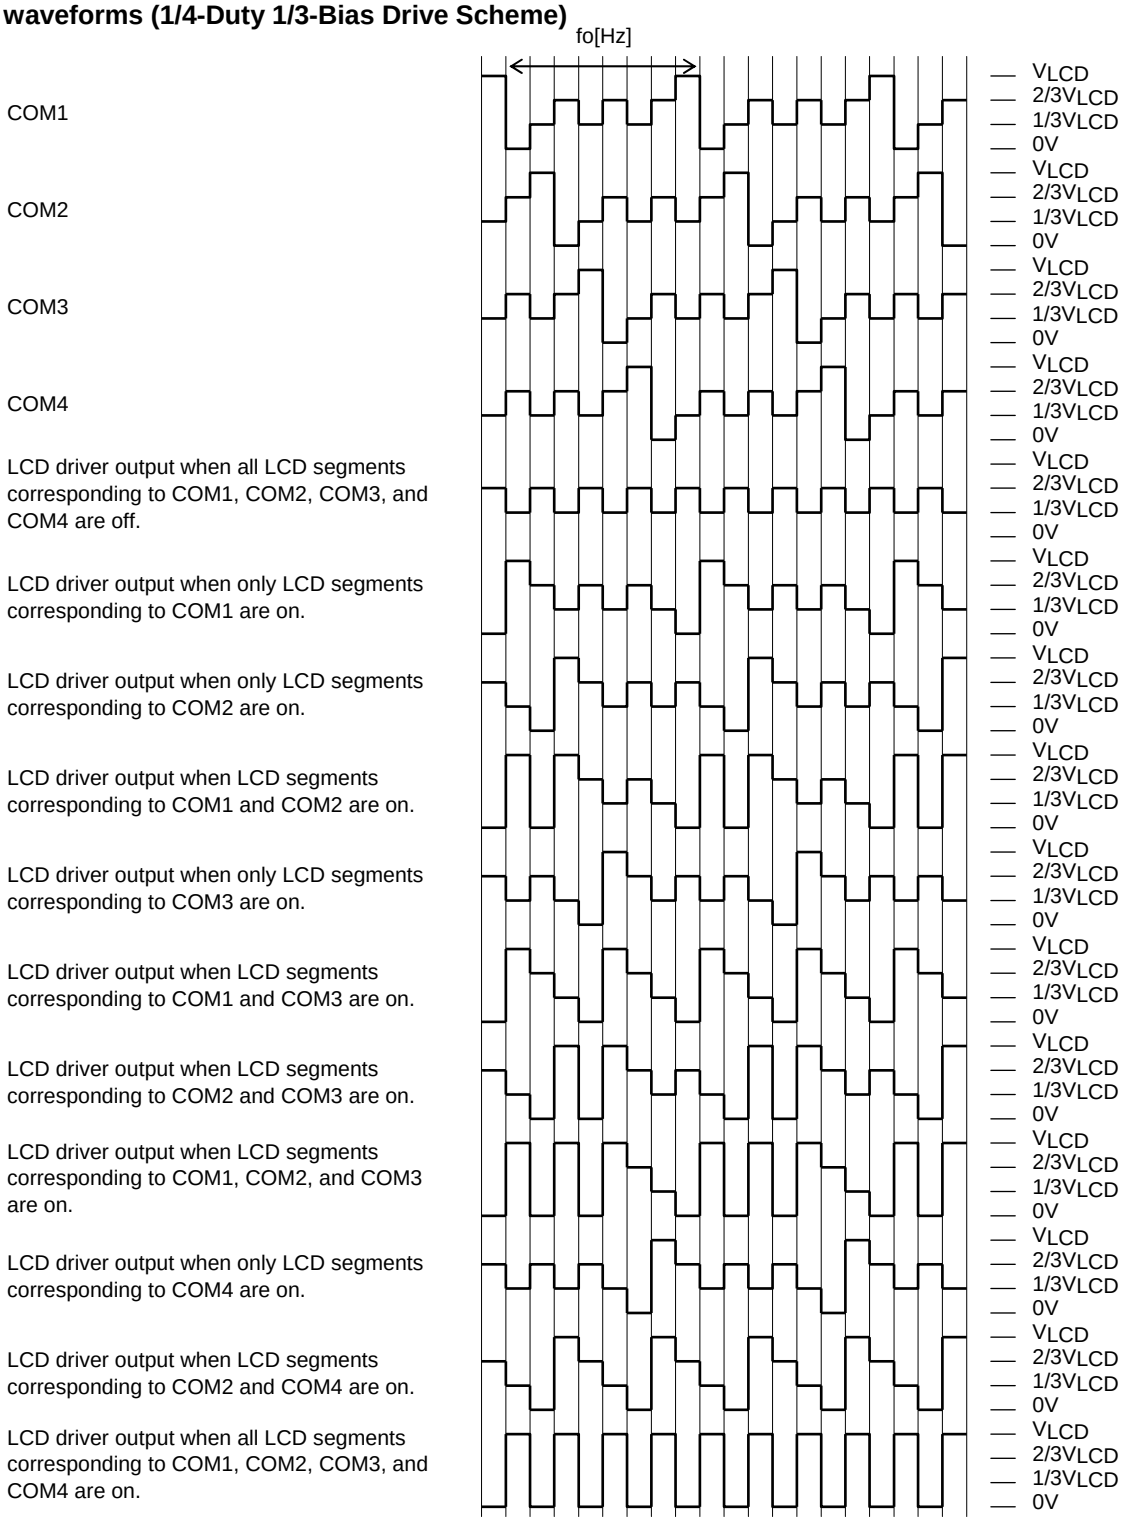
S34	D34	BD34
S35	D35	BD35
S36	D36	BD36
S37/OSCI	D37	BD37

Note: This table assumes that pins S1/P1 to S12/P12 and S37/OSCI are configured for segment output.

For example, the table below lists the output states for the S21 output pin.

Display data	Blinking control data	Output pin (S21) state
D21	BD21	
0	0	The LCD segment corresponding to COM1 is off.
1	0	The LCD segment corresponding to COM1 is on.
0	1	The LCD segment corresponding to COM1 is off.
1	1	The LCD segment corresponding to COM1 is blinking.

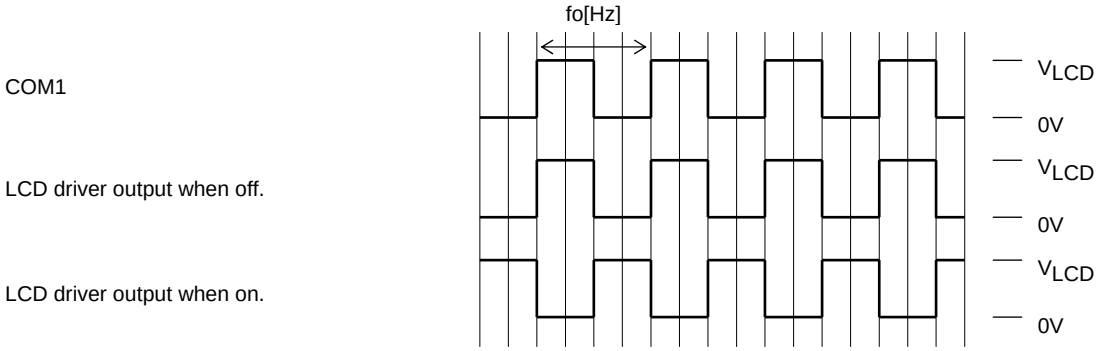
Output waveforms (1/4-Duty 1/3-Bias Drive Scheme)



Control data			Common/segment output waveform frame frequency fo[Hz]		
FC0	FC1	FC2	Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 0, $f_{CK}1$=300[kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 1, $f_{CK}2$=38[kHz]typ)
0	0	0	fosc/4608	$f_{CK}1/4608$	$f_{CK}2/576$
0	0	1	fosc/3456	$f_{CK}1/3456$	$f_{CK}2/432$
0	1	0	fosc/3072	$f_{CK}1/3072$	$f_{CK}2/384$
0	1	1	fosc/2304	$f_{CK}1/2304$	$f_{CK}2/288$
1	0	0	fosc/1536	$f_{CK}1/1536$	$f_{CK}2/192$
1	0	1	fosc/1152	$f_{CK}1/1152$	$f_{CK}2/144$
1	1	0	fosc/768	$f_{CK}1/768$	$f_{CK}2/96$

Note: When is setting (FC0, FC1, FC2) = (1, 1, 1), the frame frequency is same as frame frequency at the time of the (FC0, FC1, FC2) = (0, 1, 0) setting (fosc/3072, $f_{CK}1/3072$, $f_{CK}2/384$).

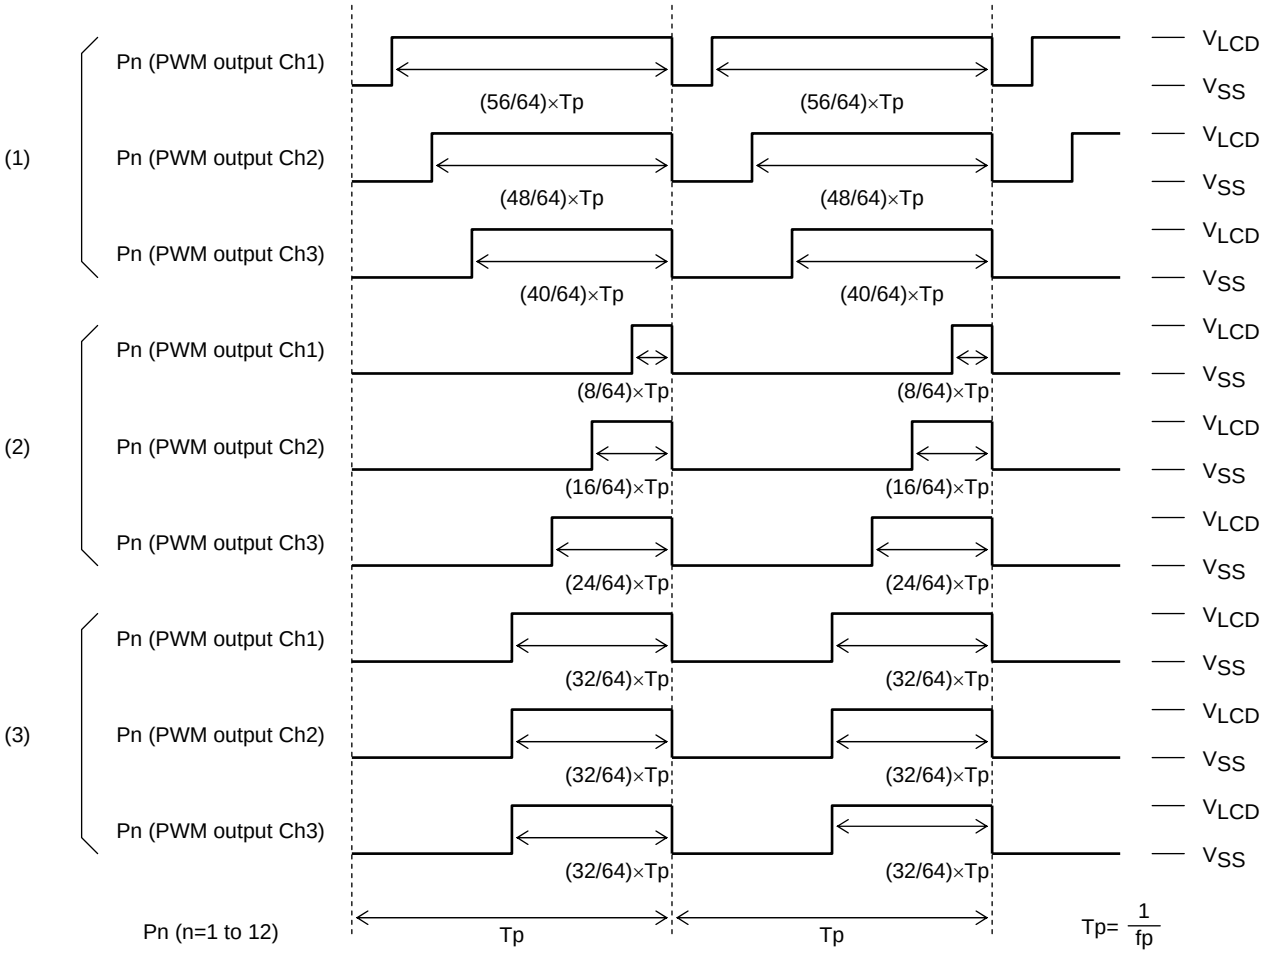
Output waveforms (Static Drive Scheme)



Control data			Common/segment output waveform frame frequency fo[Hz]		
FC0	FC1	FC2	Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 0, $f_{CK}1$=300[kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 1, $f_{CK}2$=38[kHz]typ)
0	0	0	fosc/4608	$f_{CK}1/4608$	$f_{CK}2/576$
0	0	1	fosc/3456	$f_{CK}1/3456$	$f_{CK}2/432$
0	1	0	fosc/3072	$f_{CK}1/3072$	$f_{CK}2/384$
0	1	1	fosc/2304	$f_{CK}1/2304$	$f_{CK}2/288$
1	0	0	fosc/1536	$f_{CK}1/1536$	$f_{CK}2/192$
1	0	1	fosc/1152	$f_{CK}1/1152$	$f_{CK}2/144$
1	1	0	fosc/768	$f_{CK}1/768$	$f_{CK}2/96$

Note: When is setting (FC0, FC1, FC2) = (1, 1, 1), the frame frequency is same as frame frequency at the time of the (FC0, FC1, FC2) = (0, 1, 0) setting (fosc/3072, $f_{CK}1/3072$, $f_{CK}2/384$).

PWM output waveforms



Control data																		PWM output waveforms
W10	W11	W12	W13	W14	W15	W20	W21	W22	W23	W24	W25	W30	W31	W32	W33	W34	W35

0	0	0	1	fosc/512	f_{CK}1/512
1	0	0	1	fosc/384	f_{CK}1/384
0	1	0	1	fosc/256	f_{CK}1/256

Note1: When is setting (PF0, PF1, PF2, PF3) = (1, 1, 0, 1) and (X, X, 1, 1), the frame frequency is same as frame frequency at the time of the (PF0, PF1, PF2, PF3) = (1, 0, 1, 0) setting (fosc/896, f_{CK}1/896). X: don't care

Display Control and the $\overline{INH}$ Pin

Since the LSI internal data (1/4 duty drive : the display data D1 to D148 and the control data, Static drive : the display data D1 to D37 and the control data) is undefined when power is first applied, applications should set the $\overline{INH}$ pin low at the same time as power is applied to turn off the display (This sets the S1/P1 to S12/P12, S13 to S36, COM4 to COM1, and S37/OSCI pins to the V_{SS} level.) and during this period send serial data from the controller. The controller should then set the $\overline{INH}$ pin high after the data transfer has completed. This procedure prevents meaningless display at power on.
(See Figure 4 and Figure 5.)

Notes on the Power On/Off Sequences

Applications should observe the following sequences when turning the LC75890 power on and off.
(See Figures 4 and Figure 5.)
• At power on : Logic block power supply (V_{DD}) on → LCD driver block power supply (V_{LCD}) on
• At power off : LCD driver block power supply (V_{LCD}) off → Logic block power supply (V_{DD}) off

However, if the logic and LCD driver block use a shared power supply, then the power supplies can be turned on and off at the same time.

t2>0
t3≥0 (t2>t3)
tc … 10 μs min

[Figure 5]

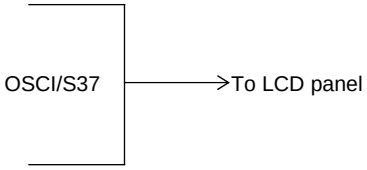
Notes on Controller Transfer of Display Data

When using the LC75890 in 1/4 duty, applications transfer the display data (D1 to D148) in three operations. In either case, applications should transfer all of the display data within 30 ms to maintain the quality of displayed image.

S37/OSCI Pin Peripheral Circuit

(1) Internal oscillator operating mode (control data OC = 0)

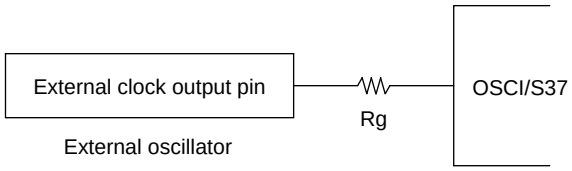
Connect the S37/OSCI pin to the LCD panel when the internal oscillator operating mode is selected.



(2) External clock operating mode (control data OC = 1)

When the external clock operating mode is selected, insert a current protection resistor Rg (2.2 to 22 kΩ) between the S37/OSCI pin and external clock output pin (external oscillator). Determine the value of the resistance according to the allowable current value at the external clock output pin. Also make sure that the waveform of the external clock is not heavily distorted.

In addition, the following conditions must be met : $V_{DD} \leq V_{LCD}$.

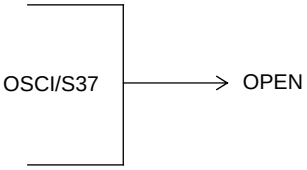


Note: Allowable current value at external clock output pin > $\frac{V_{LCD}}{Rg}$

$V_{DD} \leq V_{LCD}$

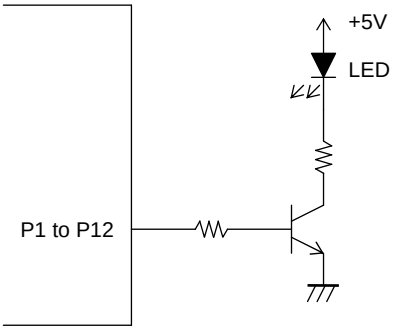
(3) Unused pin treatment

When the S37/OSCI pin is not to be used, select the internal oscillator operating mode (setting control data OC to 0) to keep the pin open.



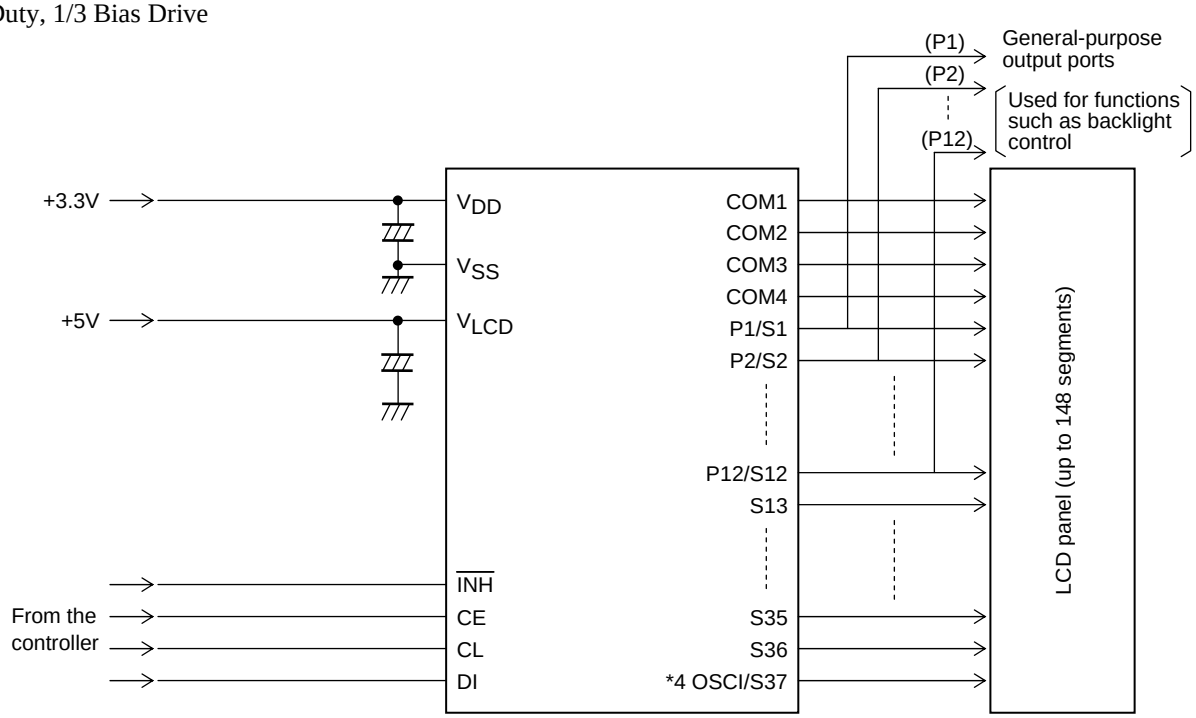
P1 to P12 pin peripheral circuit

It is recommended the circuit shown below be used to adjust the brightness of the LED backlight using the PWM output P1 to P12



Sample Applications Circuit 1

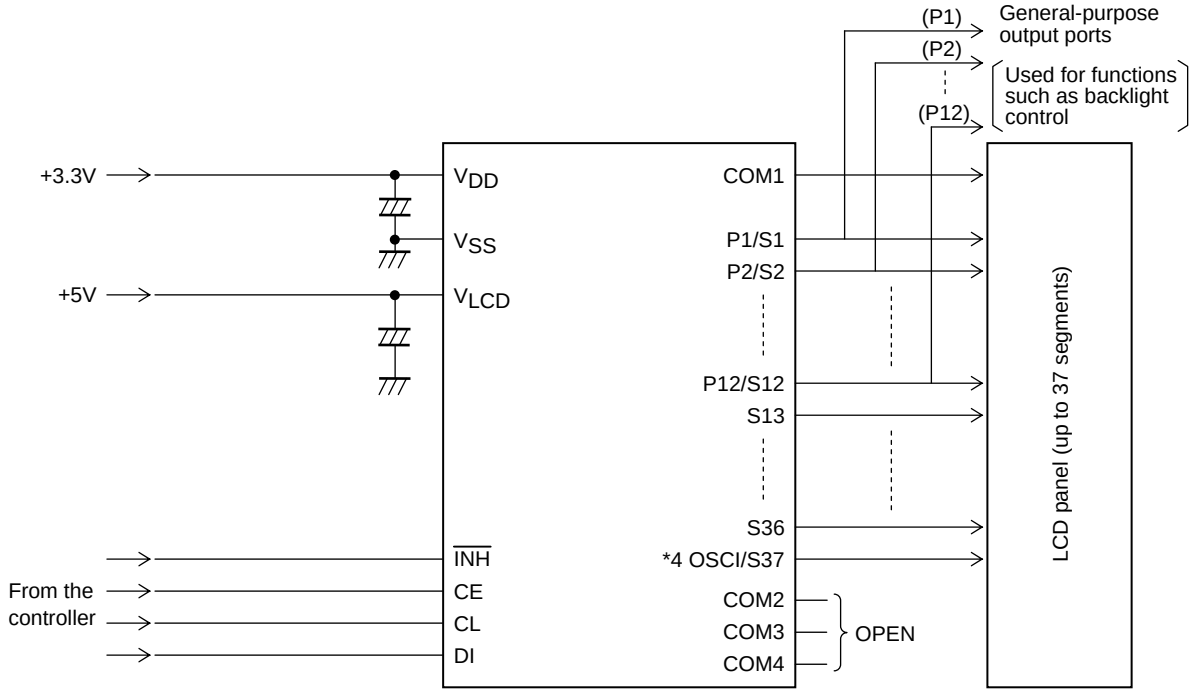
1/4 Duty, 1/3 Bias Drive



*4 Connect the S37/OSCI pin to the LCD panel in the internal oscillator operating mode and insert a current protection resistor Rg(2.2 to 22 kΩ) between the S37/OSCI pin and external clock output pin (external oscillator) in the external clock operating mode. (See “S37/OSCI Pin Peripheral Circuit”)

Sample Applications Circuit 2

Static Drive



*4 Connect the S37/OSCI pin to the LCD panel in the internal oscillator operating mode and insert a current protection resistor Rg(2.2 to 22 kΩ) between the S37/OSCI pin and external clock output pin (external oscillator) in the external clock operating mode. (See “S37/OSCI Pin Peripheral Circuit”)
