

# MCP6041/2/3/4

## 1.0 ELECTRICAL CHARACTERISTICS

### Absolute Maximum Ratings †

$V_{DD} - V_{SS}$ .....	7.0V
Current at Input Pins .....	$\pm 2$ mA
Analog Inputs ( $V_{IN+}$ , $V_{IN-}$ ) .....	$V_{SS} - 1.0V$ to $V_{DD} + 1.0V$
All Other Inputs and Outputs .....	$V_{SS} - 0.3V$ to $V_{DD} + 0.3V$
Difference Input voltage .....	$ V_{DD} - V_{SS} $
Output Short Circuit Current .....	continuous
Current at Output and Supply Pins .....	$\pm 30$ mA
Storage Temperature .....	$-65^{\circ}\text{C}$ to $+150^{\circ}\text{C}$
Junction Temperature .....	$+150^{\circ}\text{C}$
ESD protection on all pins (HBM; MM) .....	$\geq 4$ kV; 200V

† **Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

†† See [Section 4.1 “Rail-to-Rail Input”](#)

## DC ELECTRICAL CHARACTERISTICS

<b>Electrical Characteristics:</b> Unless otherwise indicated, $V_{DD} = +1.4V$ to $+5.5V$ , $V_{SS} = \text{GND}$ , $T_A = 25^{\circ}\text{C}$ , $V_{CM} = V_{DD}/2$ , $V_{OUT} \approx V_{DD}/2$ , $V_L = V_{DD}/2$ , and $R_L = 1\text{ M}\Omega$ to $V_L$ (refer to <a href="#">Figure 1-2</a> and <a href="#">Figure 1-3</a> ).						
Parameters	Sym	Min	Typ	Max	Units	Conditions
<b>Input Offset</b>						
Input Offset Voltage	$V_{OS}$	-3	—	+3	mV	$V_{CM} = V_{SS}$
Drift with Temperature	$\Delta V_{OS}/\Delta T_A$	—	$\pm 2$	—	$\mu\text{V}/^{\circ}\text{C}$	$V_{CM} = V_{SS}$ , $T_A = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$
	$\Delta V_{OS}/\Delta T_A$	—	$\pm 15$	—	$\mu\text{V}/^{\circ}\text{C}$	$V_{CM} = V_{SS}$ , $T_A = +85^{\circ}\text{C}$ to $+125^{\circ}\text{C}$
Power Supply Rejection	PSRR	70	85	—	dB	$V_{CM} = V_{SS}$
<b>Input Bias Current and Impedance</b>						
Input Bias Current	$I_B$	—	1	—	pA	
Industrial Temperature	$I_B$	—	20	100	pA	$T_A = +85^{\circ}$
Extended Temperature	$I_B$	—	1200	5000	pA	$T_A = +125^{\circ}$
Input Offset Current	$I_{OS}$	—	1	—	pA	
Common-mode Input Impedance	$Z_{CM}$	—	$10^{13}  6$	—	$\Omega  \text{pF}$	
Differential Input Impedance	$Z_{DIFF}$	—	$10^{13}  6$	—	$\Omega  \text{pF}$	
<b>Common-mode</b>						
Common-mode Input Range	$V_{CMR}$	$V_{SS}-0.3$	—	$V_{DD}+0.3$	V	
Common-mode Rejection Ratio	CMRR	62	80	—	dB	$V_{DD} = 5V$ , $V_{CM} = -0.3V$ to $5.3V$
	CMRR	60	75	—	dB	$V_{DD} = 5V$ , $V_{CM} = 2.5V$ to $5.3V$
	CMRR	60	80	—	dB	$V_{DD} = 5V$ , $V_{CM} = -0.3V$ to $2.5V$
<b>Open-Loop Gain</b>						
DC Open-Loop Gain (large signal)	$A_{OL}$	95	115	—	dB	$R_L = 50\text{ k}\Omega$ to $V_L$ , $V_{OUT} = 0.1V$ to $V_{DD}-0.1V$
<b>Output</b>						
Maximum Output Voltage Swing	$V_{OL}$ , $V_{OH}$	$V_{SS} + 10$	—	$V_{DD} - 10$	mV	$R_L = 50\text{ k}\Omega$ to $V_L$ , $0.5V$ input overdrive
Linear Region Output Voltage Swing	$V_{OVR}$	$V_{SS} + 100$	—	$V_{DD} - 100$	mV	$R_L = 50\text{ k}\Omega$ to $V_L$ , $A_{OL} \geq 95\text{ dB}$
Output Short Circuit Current	$I_{SC}$	—	2	—	mA	$V_{DD} = 1.4V$
	$I_{SC}$	—	20	—	mA	$V_{DD} = 5.5V$
<b>Power Supply</b>						
Supply Voltage	$V_{DD}$	1.4	—	6.0	V	(Note 1)
Quiescent Current per Amplifier	$I_Q$	0.3	0.6	1.0	$\mu\text{A}$	$I_O = 0$

**Note 1:** All parts with date codes November 2007 and later have been screened to ensure operation at  $V_{DD} = 6.0V$ . However, the other minimum and maximum specifications are measured at  $1.4V$  and/or  $5.5V$ .

## AC ELECTRICAL CHARACTERISTICS

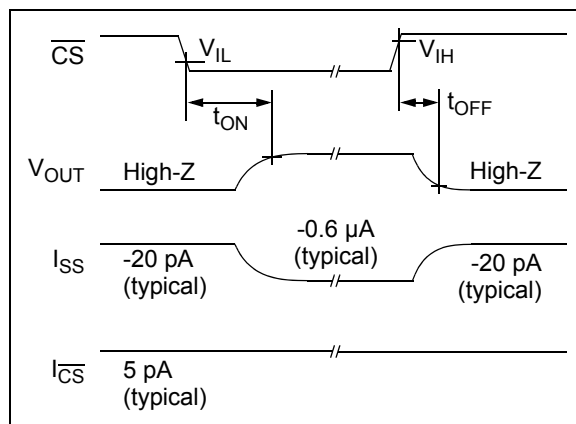

**Electrical Characteristics:** Unless otherwise indicated,  $V_{DD} = +1.4V$  to  $+5.5V$ ,  $V_{SS} = GND$ ,  $T_A = 25^\circ C$ ,  $V_{CM} = V_{DD}/2$ ,  $V_{OUT} \approx V_{DD}/2$ ,  $V_L = V_{DD}/2$ ,  $R_L = 1\text{ M}\Omega$  to  $V_L$ , and  $C_L = 60\text{ pF}$  (refer to Figure 1-2 and Figure 1-3).

Parameters	Sym	Min	Typ	Max	Units	Conditions
<b>AC Response</b>						
Gain Bandwidth Product	GBWP	—	14	—	kHz	
Slew Rate	SR	—	3.0	—	V/ms	
Phase Margin	PM	—	65	—	°	$G = +1\text{ V/V}$
<b>Noise</b>

## TEMPERATURE CHARACTERISTICS

Electrical Characteristics: Unless otherwise indicated, $V_{DD} = +1.4V$ to $+5.5V$ , $V_{SS} = GND$ .						
Parameters	Sym	Min	Typ	Max	Units	Conditions
Temperature Ranges						
Specified Temperature Range	$T_A$	-40	—	+85	°C	Industrial Temperature parts
	$T_A$	-40	—	+125	°C	Extended Temperature parts
Operating Temperature Range	$T_A$	-40	—	+125	°C	(Note 1)
Storage Temperature Range	$T_A$	-65	—	+150	°C	
Thermal Package Resistances						
Thermal Resistance, 5L-SOT-23	$\theta_{JA}$	—	256	—	°C/W	
Thermal Resistance, 6L-SOT-23	$\theta_{JA}$	—	230	—	°C/W	
Thermal Resistance, 8L-PDIP	$\theta_{JA}$	—	85	—	°C/W	
Thermal Resistance, 8L-SOIC	$\theta_{JA}$	—	163	—	°C/W	
Thermal Resistance, 8L-MSOP	$\theta_{JA}$	—	206	—	°C/W	
Thermal Resistance, 14L-PDIP	$\theta_{JA}$	—	70	—	°C/W	
Thermal Resistance, 14L-SOIC	$\theta_{JA}$	—	120	—	°C/W	
Thermal Resistance, 14L-TSSOP	$\theta_{JA}$	—	100	—	°C/W	

**Note 1:** The MCP6041/2/3/4 family of Industrial Temperature op amps operates over this extended range, but with reduced performance. In any case, the internal Junction Temperature ( $T_J$ ) must not exceed the Absolute Maximum specification of +150°C.

### 1.1 Test Circuits

The test circuits used for the DC and AC tests are shown in [Figure 1-2](#) and [Figure 1-3](#). The bypass capacitors are laid out according to the rules discussed in [Section 4.6 “Supply Bypass”](#).

**FIGURE 1-2:** AC and DC Test Circuit for Most Non-Inverting Gain Conditions.

**FIGURE 1-3:** AC and DC Test Circuit for Most Inverting Gain Conditions.

## 2.0 TYPICAL PERFORMANCE CURVES

**Note:** The graphs and tables provided following this note are a statistical summary based on a limited number of samples and are provided for informational purposes only. The performance characteristics listed herein are not tested or guaranteed. In some graphs or tables, the data presented may be outside the specified operating range (e.g., outside specified power supply range) and therefore outside the warranted range.

**Note:** Unless otherwise indicated,  $T_A = +25^\circ\text{C}$ ,  $V_{DD} = +1.4\text{V}$  to  $+6.0\text{V}$ ,  $V_{SS} = \text{GND}$ ,  $V_{CM} = V_{DD}/2$ ,  $V_{OUT} \approx V_{DD}/2$ ,  $V_L = V_{DD}/2$ ,  $R_L = 1\text{ M}\Omega$  to  $V_L$ , and  $C_L = 60\text{ pF}$ .

#### 3.1 Analog Outputs

The output pins are low-impedance voltage sources.

#### 3.2 Analog Inputs

The non-inverting and inverting inputs are high-impedance CMOS inputs with low bias currents.

#### 3.3 Chip Select Digital Input

This is a CMOS, Schmitt-triggered input that places the part into a low power mode of operation.

#### 3.4 Power Supply Pins

The positive power supply pin ( $V_{DD}$ ) is 1.4V to 6.0V higher than the negative power supply pin ( $V_{SS}$ ). For normal operation, the other pins are at voltages between  $V_{SS}$  and  $V_{DD}$ .

Typically, these parts are used in a single (positive) supply configuration. In this case,  $V_{SS}$  is connected to ground and  $V_{DD}$  is connected to the supply.  $V_{DD}$  will need bypass capacitors.

# MCP6041/2/3/4

---

NOTES:

## 4.0 APPLICATIONS INFORMATION

The MCP6041/2/3/4 family of op amps is manufactured using Microchip's state of the art CMOS process. These op amps are unity gain stable and suitable for a wide range of general purpose, low-power applications.

See Microchip's related MCP6141/2/3/4 family of op amps for applications, at a gain of 10 V/V or higher, needing greater bandwidth.

### 4.1 Rail-to-Rail Input

#### 4.1.1 PHASE REVERSAL

The MCP6041/2/3/4 op amps are designed to not exhibit phase inversion when the input pins exceed the supply voltages. Figure 2-10 shows an input voltage exceeding both supplies with no phase inversion.

#### 4.1.2 INPUT VOLTAGE AND CURRENT LIMITS

The ESD protection on the inputs can be depicted as shown in Figure 4-1. This structure was chosen to protect the input transistors, and to minimize input bias current ( $I_B$ ). The input ESD diodes clamp the inputs when they try to go more than one diode drop below  $V_{SS}$ . They also clamp any voltages that go too far above  $V_{DD}$ ; their breakdown voltage is high enough to allow normal operation, and low enough to bypass quick ESD events within the specified limits.

**FIGURE 4-1:** Simplified Analog Input ESD Structures.

In order to prevent damage and/or improper operation of these amplifiers, the circuit must limit the currents (and voltages) at the input pins (see **Absolute Maximum Ratings †** at the beginning of **Section 1.0 “Electrical Characteristics”**). Figure 4-2 shows the recommended approach to protecting these inputs. The internal ESD diodes prevent the input pins ( $V_{IN+}$  and  $V_{IN-}$ ) from going too far below ground, and the resistors  $R_1$  and  $R_2$  limit the possible current drawn out of the input pins. Diodes  $D_1$  and  $D_2$  prevent the input pins ( $V_{IN+}$  and  $V_{IN-}$ ) from going too far above  $V_{DD}$ , and

dump any currents onto  $V_{DD}$ . When implemented as shown, resistors  $R_1$  and  $R_2$  also limit the current through  $D_1$  and  $D_2$ .

**FIGURE 4-2:** Protecting the Analog Inputs.

It is also possible to connect the diodes to the left of the resistor  $R_1$  and  $R_2$ . In this case, the currents through the diodes  $D_1$  and  $D_2$  need to be limited by some other mechanism. The resistors then serve as in-rush current limiters; the DC current into the input pins ( $V_{IN+}$  and  $V_{IN-}$ ) should be very small.

A significant amount of current can flow out of the inputs (through the ESD diodes) when the Common-mode voltage ( $V_{CM}$ ) is below ground ( $V_{SS}$ ); see Figure 2-33. Applications that are high impedance may need to limit the useable voltage range.

#### 4.1.3 NORMAL OPERATION

The input stage of the MCP6041/2/3/4 op amps uses two differential input stages in parallel. One operates at a low Common-mode input voltage ( $V_{CM}$ ), while the other operates at a high  $V_{CM}$ . With this topology, the device operates with a  $V_{CM}$  up to 300 mV above  $V_{DD}$  and 300 mV below  $V_{SS}$ . The input offset voltage is measured at  $V_{CM} = V_{SS} - 0.3V$  and  $V_{DD} + 0.3V$  to ensure proper operation.

There are two transitions in input behavior as  $V_{CM}$  is changed. The first occurs, when  $V_{CM}$  is near  $V_{SS} + 0.4V$ , and the second occurs when  $V_{CM}$  is near  $V_{DD} - 0.5V$  (see Figure 2-3 and Figure 2-6). For the best distortion performance with non-inverting gains, avoid these regions of operation.

# MCP6041/2/3/4

## 4.2 Rail-to-Rail Output

There are two specifications that describe the output swing capability of the MCP6041/2/3/4 family of op amps. The first specification (Maximum Output Voltage Swing) defines the absolute maximum swing that can be achieved under the specified load condition. Thus, the output voltage swings to within 10 mV of either supply rail with a 50 kΩ load to  $V_{DD}/2$ . Figure 2-10 shows how the output voltage is limited when the input goes beyond the linear region of operation.

The second specification that describes the output swing capability of these amplifiers is the Linear Output Voltage Range. This specification defines the maximum output swing that can be achieved while the amplifier still operates in its linear region. To verify linear operation in this range, the large signal DC Open-Loop Gain ( $A_{OL}$ ) is measured at points inside the supply rails. The measurement must meet the specified  $A_{OL}$  condition in the specification table.

## 4.3 Output Loads and Battery Life

The MCP6041/2/3/4 op amp family has outstanding quiescent current, which supports battery-powered applications. There is minimal quiescent current glitching when Chip Select (CS) is raised or lowered. This prevents excessive current draw, and reduced battery life, when the part is turned off or on.

Heavy resistive loads at the output can cause excessive battery drain. Driving a DC voltage of 2.5V across a 100 kΩ load resistor will cause the supply current to increase by 25 μA, depleting the battery 43 times as fast as  $I_Q$  (0.6 μA, typical) alone.

High frequency signals (fast edge rate) across capacitive loads will also significantly increase supply current. For instance, a 0.1 μF capacitor at the output presents an AC impedance of 15.9 kΩ ( $1/(2\pi fC)$ ) to a 100 Hz sinewave. It can be shown that the average power drawn from the battery by a 5.0 V<sub>p-p</sub> sinewave (1.77 V<sub>rms</sub>), under these conditions, is

### EQUATION 4-1:

$$\begin{aligned} P_{Supply} &= (V_{DD} - V_{SS}) (I_Q + V_{L(p-p)} f C_L) \\ &= (5V)(0.6 \mu A + 5.0V_{p-p} \cdot 100Hz \cdot 0.1\mu F) \\ &= 3.0 \mu W + 50 \mu W \end{aligned}$$

This will drain the battery 18 times as fast as  $I_Q$  alone.

## 4.4 Capacitive Loads

Driving large capacitive loads can cause stability problems for voltage feedback op amps. As the load capacitance increases, the feedback loop's phase margin decreases and the closed-loop bandwidth is reduced. This produces gain peaking in the frequency response, with overshoot and ringing in the step response. A unity gain buffer ( $G = +1$ ) is the most sensitive to capacitive loads, although all gains show the same general behavior.

When driving large capacitive loads with these op amps (e.g., > 60 pF when  $G = +1$ ), a small series resistor at the output ( $R_{ISO}$  in Figure 4-3) improves the feedback loop's phase margin (stability) by making the output load resistive at higher frequencies. The bandwidth will be generally lower than the bandwidth with no capacitive load.

**FIGURE 4-3:** Output Resistor,  $R_{ISO}$  Stabilizes Large Capacitive Loads.

Figure 4-4 gives recommended  $R_{ISO}$  values for different capacitive loads and gains. The x-axis is the normalized load capacitance ( $C_L/G_N$ ), where  $G_N$  is the circuit's noise gain. For non-inverting gains,  $G_N$  and the Signal Gain are equal. For inverting gains,  $G_N$  is  $1 + |\text{Signal Gain}|$  (e.g., -1 V/V gives  $G_N = +2$  V/V).

**FIGURE 4-4:** Recommended  $R_{ISO}$  Values for Capacitive Loads.

After selecting  $R_{ISO}$  for your circuit, double check the resulting frequency response peaking and step response overshoot. Modify  $R_{ISO}$ 's value until the response is reasonable. Bench evaluation and simulations with the MCP6041/2/3/4 SPICE macro model are helpful.

## 4.5 MCP6043 Chip Select

The MCP6043 is a single op amp with Chip Select ( $\overline{\text{CS}}$ ). When  $\overline{\text{CS}}$  is pulled high, the supply current drops to 50 nA (typical) and flows through the  $\overline{\text{CS}}$  pin to  $V_{\text{SS}}$ . When this happens, the amplifier output is put into a high impedance state. By pulling  $\overline{\text{CS}}$  low, the amplifier is enabled. If the  $\overline{\text{CS}}$  pin is left floating, the amplifier may not operate properly. Figure 1-1 shows the output voltage and supply current response to a  $\overline{\text{CS}}$  pulse.

## 4.6 Supply Bypass

With this family of operational amplifiers, the power supply pin ( $V_{\text{DD}}$  for single supply) should have a local bypass capacitor (i.e., 0.01  $\mu\text{F}$  to 0.1  $\mu\text{F}$ ) within 2 mm for good high frequency performance. It can use a bulk capacitor (i.e., 1  $\mu\text{F}$  or larger) within 100 mm to provide large, slow currents. This bulk capacitor is not required for most applications and can be shared with nearby analog parts.

## 4.7 Unused Op Amps

An unused op amp in a quad package (MCP6044) should be configured as shown in Figure 4-5. These circuits prevent the output from toggling and causing crosstalk. Circuit A sets the op amp at its minimum noise gain. The resistor divider produces any desired reference voltage within the output voltage range of the op amp; the op amp buffers that reference voltage. Circuit B uses the minimum number of components and operates as a comparator, but it may draw more current.

**FIGURE 4-5:** Unused Op Amps.

## 4.8 PCB Surface Leakage

In applications where low input bias current is critical, printed circuit board (PCB) surface leakage effects need to be considered. Surface leakage is caused by humidity, dust or other contamination on the board. Under low humidity conditions, a typical resistance between nearby traces is  $10^{12} \Omega$ . A 5V difference would cause 5 pA of current to flow, which is greater than the MCP6041/2/3/4 family's bias current at +25°C (1 pA, typical).

The easiest way to reduce surface leakage is to use a guard ring around sensitive pins (or traces). The guard ring is biased at the same voltage as the sensitive pin. Figure 4-6 shows an example of this type of layout.

**FIGURE 4-6:** Example Guard Ring Layout for Inverting Gain.

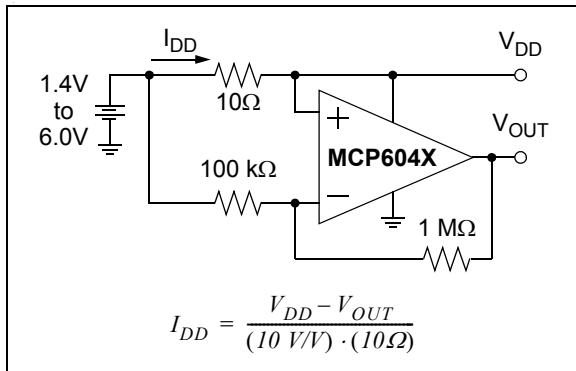

1. Non-inverting Gain and Unity Gain Buffer:
  - a) Connect the non-inverting pin ( $V_{\text{IN}+}$ ) to the input with a wire that does not touch the PCB surface.
  - b) Connect the guard ring to the inverting input pin ( $V_{\text{IN}-}$ ). This biases the guard ring to the Common-mode input voltage.
2. Inverting Gain and Transimpedance Gain (convert current to voltage, such as photo detectors) amplifiers:
  - a) Connect the guard ring to the non-inverting input pin ( $V_{\text{IN}+}$ ). This biases the guard ring to the same reference voltage as the op amp (e.g.,  $V_{\text{DD}}/2$  or ground).
  - b) Connect the inverting pin ( $V_{\text{IN}-}$ ) to the input with a wire that does not touch the PCB surface.

## 4.9 Application Circuits

### 4.9.1 BATTERY CURRENT SENSING

The MCP6041/2/3/4 op amps' Common-mode Input Range, which goes 0.3V beyond both supply rails, supports their use in high-side and low-side battery current sensing applications. The very low quiescent current (0.6  $\mu$ A, typical) helps prolong battery life, and the rail-to-rail output supports detection low currents.

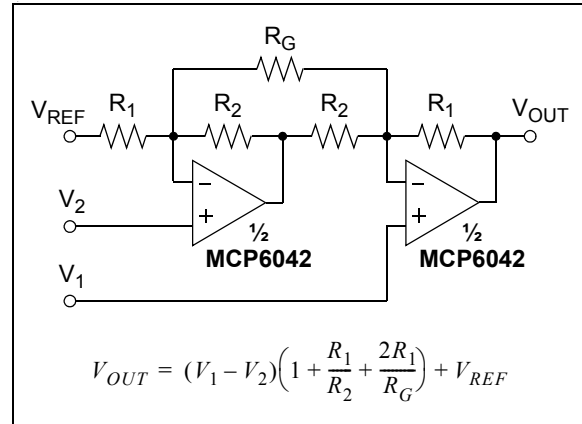

Figure 4-7 shows a high-side battery current sensor circuit. The 10 $\Omega$  resistor is sized to minimize power losses. The battery current ( $I_{DD}$ ) through the 10 $\Omega$  resistor causes its top terminal to be more negative than the bottom terminal. This keeps the Common-mode input voltage of the op amp below  $V_{DD}$ , which is within its allowed range. The output of the op amp will also be below  $V_{DD}$ , which is within its Maximum Output Voltage Swing specification.

**FIGURE 4-7:** High-Side Battery Current Sensor.

### 4.9.2 INSTRUMENTATION AMPLIFIER

The MCP6041/2/3/4 op amp is well suited for conditioning sensor signals in battery-powered applications. Figure 4-8 shows a two op amp instrumentation amplifier, using the MCP6042, that works well for applications requiring rejection of Common-mode noise at higher gains. The reference voltage ( $V_{REF}$ ) is supplied by a low impedance source. In single supply applications,  $V_{REF}$  is typically  $V_{DD}/2$ .

**FIGURE 4-8:** Two Op Amp Instrumentation Amplifier.

## 5.0 DESIGN AIDS

Microchip provides the basic design tools needed for the MCP6041/2/3/4 family of op amps.

### 5.1 SPICE Macro Model

The latest SPICE macro model for the MCP6041/2/3/4 op amps is available on the Microchip web site at [www.microchip.com](http://www.microchip.com). This model is intended to be an initial design tool that works well in the op amp's linear region of operation over the temperature range. See the model file for information on its capabilities.

Bench testing is a very important part of any design and cannot be replaced with simulations. Also, simulation results using this macro model need to be validated by comparing them to the data sheet specifications and characteristic curves.

### 5.2 FilterLab® Software

Microchip's FilterLab® software is an innovative software tool that simplifies analog active filter (using op amps) design. Available at no cost from the Microchip web site at [www.microchip.com/filterlab](http://www.microchip.com/filterlab), the FilterLab design tool provides full schematic diagrams of the filter circuit with component values. It also outputs the filter circuit in SPICE format, which can be used with the macro model to simulate actual filter performance.

### 5.3 MAPS (Microchip Advanced Part Selector)

MAPS is a software tool that helps semiconductor professionals efficiently identify Microchip devices that fit a particular design requirement. Available at no cost from the Microchip website at [www.microchip.com/maps](http://www.microchip.com/maps), the MAPS is an overall selection tool for Microchip's product portfolio that includes Analog, Memory, MCUs and DSCs. Using this tool you can define a filter to sort features for a parametric search of devices and export side-by-side technical comparison reports. Helpful links are also provided for data sheets, purchase, and sampling of Microchip parts.

## 5.4 Analog Demonstration and Evaluation Boards

Microchip offers a broad spectrum of Analog Demonstration and Evaluation Boards that are designed to help you achieve faster time to market. For a complete listing of these boards and their corresponding user's guides and technical information, visit the Microchip web site at [www.microchip.com/analogtools](http://www.microchip.com/analogtools).

Some boards that are especially useful are:

- **P/N SOIC8EV:** 8-Pin SOIC/MSOP/TSSOP/DIP Evaluation Board
- **P/N SOIC14EV:** 14-Pin SOIC/TSSOP/DIP Evaluation Board
- MCP6XXX Amplifier Evaluation Board 1
- MCP6XXX Amplifier Evaluation Board 2
- MCP6XXX Amplifier Evaluation Board 3
- MCP6XXX Amplifier Evaluation Board 4
- Active Filter Demo Board Kit

## 5.5 Application Notes

The following Microchip Application Notes are available on the Microchip web site at [www.microchip.com/appnotes](http://www.microchip.com/appnotes) and are recommended as supplemental reference resources:

**ADN003:** "Select the Right Operational Amplifier for your Filtering Circuits," DS21821

**AN722:** "Operational Amplifier Topologies and DC Specifications," DS00722

**AN723:** "Operational Amplifier AC Specifications and Applications," DS00723

**AN884:** "Driving Capacitive Loads With Op Amps," DS00884

**AN990:** "Analog Sensor Conditioning Circuits – An Overview," DS00990

These application notes and others are listed in the design guide:

"Signal Chain Design Guide," DS21825

# MCP6041/2/3/4

NOTES:

## 6.0 PACKAGING INFORMATION

### 6.1 Package Marking Information

5-Lead SOT-23 (MCP6041)

Device	I-Temp Code	E-Temp Code
MCP6041/T-E/OT	SPNN	7XNN

**Note:** Parts with date codes prior to November 2012 have their package markings in the SBNN format.

Example:

6-Lead SOT-23 (MCP6043)

Device	I-Temp Code	E-Temp Code
MCP6043T-E/CH	SCNN	SDNN

Example:

8-Lead MSOP

Example:

8-Lead PDIP (300 mil)

Example:

OR

<b>Legend:</b>	XX...X	Customer-specific information
	Y	Year code (last digit of calendar year)
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week '01')
	Ne3	Alphanumeric traceability code
	Pb-free JEDEC designator for Matte Tin (Sn)	
	*	This package is Pb-free. The Pb-free JEDEC designator (e3) can be found on the outer packaging for this package.

**Note:** In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line, thus limiting the number of available characters for customer-specific information.

# MCP6041/2/3/4

## Package Marking Information (Continued)

8-Lead SOIC (150 mil)

Example:

14-Lead PDIP (300 mil) (**MCP6044**)

Example:

14-Lead SOIC (150 mil) (**MCP6044**)

Example:

## Package Marking Information (Continued)

14-Lead TSSOP (MCP6044)

Contact Pad Width (X14)	X1			0.45
Contact Pad Length (X14)	Y1			1.45
Distance Between Pads	G	0.20		

Notes:

1. Dimensioning and tolerancing per ASME Y14.5M

BSC: Basic Dimension. Theoretically exact value shown without tolerances.

Microchip Technology Drawing No. C04-2087A

## APPENDIX A: REVISION HISTORY

### Revision E (November 2019)

The following is the list of modifications:

1. Updated [Section 6.0 “Packaging Information”](#).

### Revision D (March 2013)

The following is the list of modifications:

1. Updated the boards list in [Section 5.4 “Analog Demonstration and Evaluation Boards”](#).
2. Removed the **Mindi™ Circuit Designer & Simulator** section.
3. Updated the E-Temp Code value for the 5-Lead SOT-23 package in [Section 6.0 “Packaging Information”](#).

### Revision C (February 2008)

The following is the list of modifications:

1. Updated [Figure 2-4](#) and [Figure 2-5](#).
2. Updated trademark and Sales listing pages.
3. Expanded this op amp family:
4. Added the SOT-23-6 package for the MCP6043 op amp with Chip Select.
5. Added Extended Temperature (-40°C to +125°C) parts.
6. Expanded Analog Input Absolute Max Voltage Range (applies retroactively).
7. Expanded operating  $V_{DD}$  to a maximum of 6.0V.
8. [Section 1.0 “Electrical Characteristics”](#) updated.
9. [Section 2.0 “Typical Performance Curves”](#) updated.
10. [Section 3.0 “Pin Descriptions”](#) added.
11. [Section 4.0 “Applications Information”](#) added.
12. Added [Section 4.7 “Unused Op Amps”](#).
13. Updated input stage explanation.
14. [Section 5.0 “Design Aids”](#) updated.
15. [Section 6.0 “Packaging Information”](#) updated.
16. Added SOT-23-6 package.
17. Corrected package marking information.
18. [Appendix A: “Revision History”](#) added.

### Revision B (June 2002)

The following is the list of modifications.

- Undocumented changes.

### Revision A (August 2001)

- Original data sheet release.

# MCP6041/2/3/4

---

NOTES:

## PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

<u>PART NO.</u>	<u>X</u>	<u>/XX</u>
Device	Temperature Range	Package
<b>Device:</b> <p> MCP6041: Single Op Amp  MCP6041T Single Op Amp  (Tape and Reel for SOT-23, SOIC, MSOP)  MCP6042 Dual Op Amp  MCP6042T Dual Op Amp  (Tape and Reel for SOIC and MSOP)  MCP6043 Single Op Amp w/ Chip Select  MCP6043T Single Op Amp w/ Chip Select  (Tape and Reel for SOT-23, SOIC, MSOP)  MCP6044 Quad Op Amp  MCP6044T Quad Op Amp  (Tape and Reel for SOIC and TSSOP) </p> <b>Temperature Range:</b> <p> I = -40°C to +85°C  E = -40°C to +125°C </p> <b>Package:</b> <p> CH = Plastic Small Outline Transistor (SOT-23), 6-lead (Tape and Reel - MCP6043 only)  MS = Plastic Micro Small Outline (MSOP), 8-lead  OT = Plastic Small Outline Transistor (SOT-23), 5-lead (Tape and Reel - MCP6041 only)  P = Plastic DIP (300 mil Body), 8-lead, 14-lead  SL = Plastic SOIC (150 mil Body), 14-lead  SN = Plastic SOIC (150 mil Body), 8-lead  ST = Plastic TSSOP (4.4 mm Body), 14-lead </p>		
<b>Examples:</b> <p> a) MCP6041-I/P: Industrial Temperature, 8LD PDIP package.  b) MCP6041T-E/OT: Tape and Reel, Extended Temperature, 5LD SOT-23 package.    a) MCP6042-I/SN: Industrial Temperature, 8LD SOIC package.  b) MCP6042T-E/MS: Tape and Reel, Extended Temperature, 8LD MSOP package.    a) MCP6043-I/P: Industrial Temperature, 8LD PDIP package.  b) MCP6043T-E/CH: Tape and Reel, Extended Temperature, 6LD SOT-23 package.    a) MCP6044-I/SL: Industrial Temperature, 14LD SOIC package.  b) MCP6044T-E/ST: Tape and Reel, Extended Temperature, 14LD TSSOP package. </p>

NOTES:

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

---

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

#### Trademarks

The Microchip name and logo, the Microchip logo, Adaptec, AnyRate, AVR, AVR logo, AVR Freaks, BesTime, BitCloud, chipKIT, chipKIT logo, CryptoMemory, CryptoRF, dsPIC, FlashFlex, flexPWR, HELDO, IGLOO, JukeBlox, KeeLoq, Klear, LANCheck, LinkMD, maXStylus, maXTouch, MediaLB, megaAVR, Microsemi, Microsemi logo, MOST, MOST logo, MPLAB, OptoLyzer, PackTime, PIC, picoPower, PICSTART, PIC32 logo, PolarFire, Prochip Designer, QTouch, SAM-BA, SenGenuity, SpyNIC, SST, SST Logo, SuperFlash, Symmetricom, SyncServer, Tachyon, TempTrackr, TimeSource, tinyAVR, UNI/O, Vectron, and XMEGA are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

APT, ClockWorks, The Embedded Control Solutions Company, EtherSynch, FlashTec, Hyper Speed Control, HyperLight Load, IntelliMOS, Libero, motorBench, mTouch, Powermite 3, Precision Edge, ProASIC, ProASIC Plus, ProASIC Plus logo, Quiet-Wire, SmartFusion, SyncWorld, Temux, TimeCesium, TimeHub, TimePictra, TimeProvider, Vite, WinPath, and ZL are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Adjacent Key Suppression, AKS, Analog-for-the-Digital Age, Any Capacitor, AnyIn, AnyOut, BlueSky, BodyCom, CodeGuard, CryptoAuthentication, CryptoAutomotive, CryptoCompanion, CryptoController, dsPICDEM, dsPICDEM.net, Dynamic Average Matching, DAM, ECAN, EtherGREEN, In-Circuit Serial Programming, ICSP, INICnet, Inter-Chip Connectivity, JitterBlocker, KlearNet, KlearNet logo, memBrain, Mindi, MiWi, MPASM, MPF, MPLAB Certified logo, MPLIB, MPLINK, MultiTRAK, NetDetach, Omniscient Code Generation, PICDEM, PICDEM.net, PICKit, PICtail, PowerSmart, PureSilicon, QMatrix, REAL ICE, Ripple Blocker, SAM-ICE, Serial Quad I/O, SMART-I.S., SQI, SuperSwitcher, SuperSwitcher II, Total Endurance, TSHARC, USBCheck, VariSense, ViewSpan, WiperLock, Wireless DNA, and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

The Adaptec logo, Frequency on Demand, Silicon Storage Technology, and Symmcom are registered trademarks of Microchip Technology Inc. in other countries.

GestIC is a registered trademark of Microchip Technology Germany II GmbH & Co. KG, a subsidiary of Microchip Technology Inc., in other countries.

All other trademarks mentioned herein are property of their respective companies.
