

RF chokes B82145A

HLBC series, 6.5 x 12 (mm)

HLBC choke (High-Current Large Bobbin Core)
Rated inductance 100 ... 10 000 μH
Rated current 110 ... 860 mA

Construction

- Large ferrite drum core
- Winding: enamel copper wire
- Flame-retardant lacquer coating

- High rated current at high inductance ratings
- Radial leads in bulk on request (B82145C)
- Suitable for wave soldering
- RoHS-compatible

Applications

- Decoupling
- Interference suppression
- For energy-saving lamps and entertainment electronics

Terminals

- Central axial leads (B82145A)
- Radially bent to 5mm lead spacing (B82145C)
- Base material CuAg0.1
- Electroplated with nickel and pure tin

Marking

Inductance indicated by color bands to IEC 60062

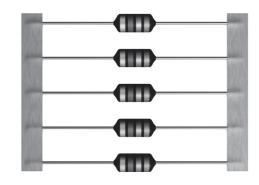

Delivery mode and packing unit

Taped and reeled

Packing unit: 1250 pcs./reel

Bulk packaging for radially bent

Packing unit: 200 pcs./polyethylene bag

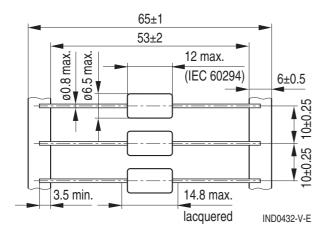

RF chokes B82145A

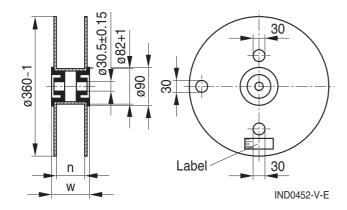

HLBC series, 6.5 x 12 (mm)

Dimensional drawing

Dimensions in mm Minimum lead spacing 15 mm

Packing

Dimensions in mm

n (mm): 72 +1 w (mm): 84 max

RF chokes B82145A

HLBC series, 6.5 x 12 (mm)

Technical data and measuring conditions

Rated inductance L _R	Measured with LCR meter Agilent 4284A or impedance analyzer Agilent 4294A					
	Measuring frequency: $100 \mu H < L_R \le 4700 \mu H = 100 kHz$ $L_R > 4700 \mu H = 10 kHz$					
	Measuring current: ≤ 1 mA Measuring temperature: +20 °C					
Q factor Q _{min}	Measured with precision impedance analyzer Agilent 4294A, +20 °C					
Rated temperature T _R	+40 °C					
Rated current I _R	Maximum permissible DC current at rated temperature					
Inductance decrease ΔL/L ₀	≤ 10% (referred to initial value) at I _R , +20 °C					
DC resistance R _{max}	Measured at +20 °C					
Resonance frequency f _{res,min}	Measured with Agilent 4294A or 8753ES, +20 °C					
Solderability (lead-free)	Sn95.5Ag3.8Cu0.7: $+(245 \pm 5)$ °C, (3 ± 0.3) s Wetting of soldering area $\geq 90\%$ (to IEC 60068-2-20, test Ta)					
Resistance to soldering heat	+(260 ±5) °C, 10 s (to IEC 60068-2-20, test Tb)					
Tensile strength of leads	≥ 20 N (to IEC 60068-2-21, test Ua)					
Climatic category	55/125/56 (to IEC 60068-1)					
Storage conditions	Mounted: -55 °C +125 °C Packaged: -25 °C +40 °C, ≤ 75% RH					
Weight	Approx. 1.3 g					

Mounting information

When bending the leads, take care that the start-of-winding areas at the face ends (protected by glue and lacquer) are not subjected to any mechanical stress.

RF chokes B82145A

HLBC series, 6.5 x 12 (mm)

Characteristics and ordering codes

L _R	Tolerance ¹⁾	Q _{min}	f _Q	I _R	R _{max}	f _{res,min}	Ordering code
μΗ			MHz	mA	Ω	MHz	
100	±5% ≙ J	50	0.796	860	0.70	3.5	B82145A1104J000

10000		50	0.0796	110	35.0	0.35	B82145A1106J000

HLBC chokes with diameter 7.5 and 8.5 mm for even higher rated currents available on request. HLBC chokes with temperature range up to +140 °C available on request.

¹⁾ Closer tolerances on request.

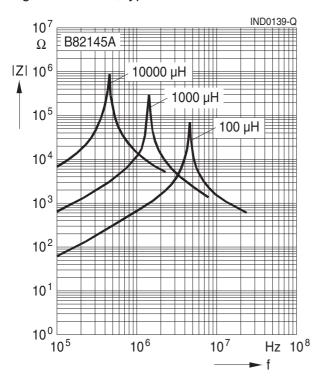

RF chokes B82145A

HLBC series, 6.5 x 12 (mm)

Impedance |Z| versus frequency f

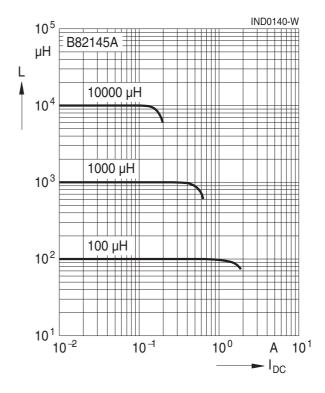

measured with impedance analyzer Agilent 4294A or S-parameter network analyzer Agilent 8753ES, typical values at +20 °C

Q factor versus frequency f measured with impedance analyzer Agilent 4294A, typical values at +20 °C

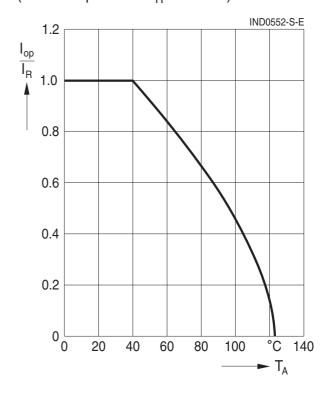

IND0141-R 200 B82145A Q 100 100 µH 1000 µH 10000 µH 10⁵ 10⁶ Hz 10⁷ - f

Inductance L versus DC load current I_{DC} measured with LCR meter Agilent 4284A, typical values at +20 °C

Current derating I_{op}/I_R versus ambient temperature TA

(rated temperature $T_B = +40$ °C)

Cautions and warnings

- Please note the recommendations in our Inductors data book (latest edition) and in the data sheets.
 - Particular attention should be paid to the derating curves given there.
 - The soldering conditions should also be observed. Temperatures quoted in relation to wave soldering refer to the pin, not the housing.
- If the components are to be washed varnished it is necessary to check whether the washing varnish agent that is used has a negative effect on the wire insulation, any plastics that are used, or on glued joints. In particular, it is possible for washing varnish agent residues to have a negative effect in the long-term on wire insulation.

 Washing processes may damage the product due to the possible static or cyclic mechanical loads (e.g. ultrasonic cleaning). They may cause cracks to develop on the product and its parts, which might lead to reduced reliability or lifetime.
- The following points must be observed if the components are potted in customer applications:
 - Many potting materials shrink as they harden. They therefore exert a pressure on the plastic housing or core. This pressure can have a deleterious effect on electrical properties, and in extreme cases can damage the core or plastic housing mechanically.
 - It is necessary to check whether the potting material used attacks or destroys the wire insulation, plastics or glue.
 - The effect of the potting material can change the high-frequency behaviour of the components.
- Ferrites are sensitive to direct impact. This can cause the core material to flake, or lead to breakage of the core.
- Even for customer-specific products, conclusive validation of the component in the circuit can only be carried out by the customer.

Important notes

The following applies to all products named in this publication:

- 1. Some parts of this publication contain statements about the suitability of our products for certain areas of application. These statements are based on our knowledge of typical requirements that are often placed on our products in the areas of application concerned. We nevertheless expressly point out that such statements cannot be regarded as binding statements about the suitability of our products for a particular customer application. As a rule we are either unfamiliar with individual customer applications or less familiar with them than the customers themselves. For these reasons, it is always ultimately incumbent on the customer to check and decide whether a product with the properties described in the product specification is suitable for use in a particular customer application.
- 2. We also point out that in individual cases, a malfunction of electronic components or failure before the end of their usual service life cannot be completely ruled out in the current state of the art, even if they are operated as specified. In customer applications requiring a very high level of operational safety and especially in customer applications in which the malfunction or failure of an electronic component could endanger human life or health (e.g. in accident prevention or life-saving systems), it must therefore be ensured by means of suitable design of the customer application or other action taken by the customer (e.g. installation of protective circuitry or redundancy) that no injury or damage is sustained by third parties in the event of malfunction or failure of an electronic component.
- 3. The warnings, cautions and product-specific notes must be observed.
- 4. In order to satisfy certain technical requirements, some of the products described in this publication may contain substances subject to restrictions in certain jurisdictions (e.g. because they are classed as hazardous). Useful information on this will be found in our Material Data Sheets on the Internet (www.tdk-electronics.tdk.com/material). Should you have any more detailed questions, please contact our sales offices.
- 5. We constantly strive to improve our products. Consequently, the products described in this publication may change from time to time. The same is true of the corresponding product specifications. Please check therefore to what extent product descriptions and specifications contained in this publication are still applicable before or when you place an order.
 - We also **reserve the right to discontinue production and delivery of products**. Consequently, we cannot guarantee that all products named in this publication will always be available. The aforementioned does not apply in the case of individual agreements deviating from the foregoing for customer-specific products.
- 6. Unless otherwise agreed in individual contracts, all orders are subject to our General Terms and Conditions of Supply.
- 7. Our manufacturing sites serving the automotive business apply the IATF 16949 standard. The IATF certifications confirm our compliance with requirements regarding the quality management system in the automotive industry. Referring to customer requirements and customer specific requirements ("CSR") TDK always has and will continue to have the policy of respecting individual agreements. Even if IATF 16949 may appear to support the acceptance of unilateral requirements, we hereby like to emphasize that only requirements mutually agreed upon can and will be implemented in our Quality Management System. For clarification purposes we like to point out that obligations from IATF 16949 shall only become legally binding if individually agreed upon.
- 8. The trade names EPCOS, CeraCharge, CeraDiode, CeraLink, CeraPad, CeraPlas, CSMP, CTVS, DeltaCap, DigiSiMic, ExoCore, FilterCap, FormFit, LeaXield, MiniBlue, MiniCell, MKD, MKK, MotorCap, PCC, PhaseCap, PhaseCube, PhaseMod, PhiCap, PowerHap, PQSine, PQvar, SIFERRIT, SIFI, SIKOREL, SilverCap, SIMDAD, SiMic, SIMID, SineFormer, SIOV, ThermoFuse, WindCap are **trademarks registered or pending** in Europe and in other countries. Further information will be found on the Internet at www.tdk-electronics.tdk.com/trademarks.
