## **Operating Ratings ‡**

Power Dissipation (T <sub>A</sub> = +70°C)	nW
--	----

**† Notice:** Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational sections of this specification is not intended. Exposure to maximum rating conditions for extended periods may affect device reliability.

**‡ Notice:** The device is not guaranteed to function outside its operating ratings.

Note 1: Devices are ESD sensitive. Handling precautions are recommended. Human body model, 1.5 k $\Omega$  in series with 100 pF.

Parameter	Symbol	Min.	Тур.	Max.	Units	Conditions
Operating Voltage Range	V <sub>CC</sub>	1	_	5.5	V	$T_A = -40^{\circ}C \text{ to } +85^{\circ}C$
Supply Current	I <sub>CC</sub>	_	5	15	μA	
Reset Voltage Threshold	V <sub>TH</sub>	3.00	3.08	3.15	V	—
Reset Timeout Period	t <sub>RST</sub>	1100	1700	2500	ms	—
/RESET Output Voltage	V <sub>OH</sub>	0.8 x V <sub>CC</sub>	_	_	V	I <sub>SOURCE</sub> = 500 μA
	V <sub>OL</sub>	_	—	0.3	V	$V_{CC} = V_{TH(MIN)}$ , $I_{SINK} = 1.2 \text{ mA}$
/RESET Output Voltage		_	_	0.3		$V_{CC}$ = 1V, I <sub>SINK</sub> = 50 µA, T <sub>A</sub> = -40°C to +85°C
/MR Minimum Pulse Width	—	10			μs	—
/MR to Reset Delay	—	_	0.5	_	μs	—
/MR Input Throshold	V <sub>IH</sub>	0.7 x V <sub>CC</sub>	I	_	V	_
/MR Input Threshold	V <sub>IL</sub>		_	0.25 x V <sub>CC</sub>	V	_
/MR Pull-Up Resistance	—	10	20	30	kΩ	—
/MR Glitch Immunity	—	_	100		ns	_

#### TABLE 1-1: ELECTRICAL CHARACTERISTICS

**Electrical Characteristics:** For typical values,  $V_{CC}$  = 3.3V;  $T_A$  = +25°C, **bold** values indicate -40°C ≤  $T_A$  ≤ +85°C, unless noted.

#### **TEMPERATURE SPECIFICATIONS (Note 1)**

Parameters	Sym.	Min.	Тур.	Max.	Units	Conditions
Temperature Ranges						
Operating Temperature Range	_	-40	—	+85	°C	—
Storage Temperature Range	Τ <sub>S</sub>	-65	_	+150	°C	—
Lead Temperature	_	_	_	+300	°C	Soldering, 10s

**Note 1:** The maximum allowable power dissipation is a function of ambient temperature, the maximum allowable junction temperature and the thermal resistance from junction to air (i.e., T<sub>A</sub>, T<sub>J</sub>, θ<sub>JA</sub>). Exceeding the maximum allowable power dissipation will cause the device operating junction temperature to exceed the maximum +85°C rating. Sustained junction temperatures above +85°C can impact the device reliability.

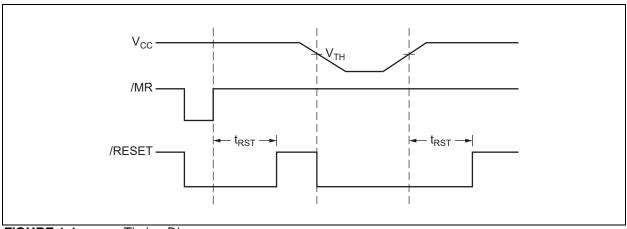

FIGURE 1-1: Timing Diagram.

### 2.0 PIN DESCRIPTIONS

The descriptions of the pins are listed in Table 2-1.

Pin Number	Pin Name	Description
1	GND	IC Ground Pin.
2	/RESET	/RESET goes low if either V <sub>CC</sub> falls below the supply reset threshold voltage or if /MR is asserted. /RESET remains asserted for one reset timeout period 1100 ms (minimum) after both V <sub>CC</sub> exceeds the supply reset threshold voltage and /MR is de-asserted.
3	/MR	Manual Reset Input. A logic-low on /MR forces a reset. The reset will remain asserted as long as /MR is held low and for one reset timeout period (1100 ms, minimum) after /MR goes high. This input can be shorted to ground via a switch or driven from CMOS or TTL logic. Pulled high internally through a 20 k $\Omega$ resistor. Float if unused.
4	VCC	Power Supply Input.

#### TABLE 2-1: PIN FUNCTION TABLE

<sup>© 2017</sup> Microchip Technology Inc.

## 3.0 APPLICATION INFORMATION

#### 3.1 Microprocessor Reset

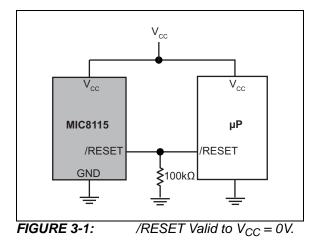

The /RESET pin is asserted whenever V<sub>CC</sub> falls below the reset threshold voltage. The reset pin remains asserted for a period of 1100 ms after V<sub>CC</sub> has risen above the reset threshold voltage. The reset function ensures the microprocessor is properly reset and powers up into a known condition after a power failure. /RESET will remain valid with V<sub>CC</sub> as low as 1.4V.

#### 3.2 VCC Transients

The MIC8115 is relatively immune to the negative-going V<sub>CC</sub> glitches below the reset threshold. Typically, a negative-going transient 125 mV belt the reset threshold with duration of 20  $\mu s$  or less will not cause a reset.

#### 3.3 /RESET Valid at Low Voltage

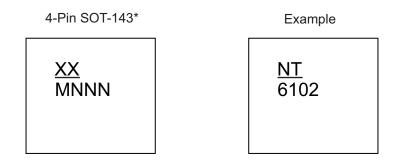

A resistor can be added from the /RESET pin to the ground to ensure the /RESET output remains low with  $V_{CC}$  down to 0V. A 100 k $\Omega$  resistor connected from /RESET to ground is recommended. The resistor should be large enough not to load the /RESET output and small enough to pull-down any stray leakage currents.

#### APPENDIX A: REVISION HISTORY

#### **Revision A (August 2017)**

- Converted Micrel document MIC8115 to Microchip data sheet DS20005829A.
- Minor text changes throughout.
- Corrected a pin numbering error in the Package Type image.

NOTES:

#### Note the following details of the code protection feature on Microchip devices:

- · Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEEL0Q® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
