

## Ordering Information

Part Number	Package Type	Operating Range	Package Marking	Lead Finish
SY88289HLMG	QFN-16	Industrial	289H with Pb-Free bar line indicator	NiPdAu Pb-Free
SY88289HLMGTR <sup>(1)</sup>	QFN-16	Industrial	289H with Pb-Free bar line indicator	NiPdAu Pb-Free

**Note:**

1. Tape and Reel.

## Pin Configuration

16-Pin QFN

## Pin Description

Pin Number	Pin Name	Type	Pin Function
1, 12	VCC	Power Supply	Positive power supply.
2	DIN	Data Input	True data input.
3	/DIN	Data Input	Complementary data input.
4, 9	GND	Ground	Device ground.
5	VREF		Reference voltage: Placing a capacitor here to VCC helps stabilize LOS <sub>LVL</sub> .
6	LOSLVL	Input	Loss-of-signal Level Set: a resistor from this pin to V <sub>CC</sub> sets the threshold for the data input amplitude at which LOS will be asserted.
7, 14, 15, 16	N/C		No connect.
8	LOS	Open-collector TTL output w/ internal 4.75kΩ pull-up resistor	Loss-of-signal: asserts high when the data input amplitude falls below the threshold sets by LOS <sub>LVL</sub> .
10	/DOUT	CML Output	Complementary data output.
11	DOUT	CML Output	True data output.
13	/EN	TTL Input: Default is HIGH.	/Enable: This input enables the outputs when it is LOW. Note that this input is internally connected to a 25kΩ pull-up resistor and will default to a logic HIGH state if left open.

**Absolute Maximum Ratings<sup>(1)</sup>**

Supply Voltage ( $V_{CC}$ )	0V to +4.0V
Input Voltage (DIN, /DIN)	0 to $V_{CC}$
Output Current ( $I_{OUT}$ )	
Continuous	$\pm 25$ mA
/EN Voltage	0 to $V_{CC}$
$V_{REF}$ Current	-800 $\mu$ A to +500 $\mu$ A
$LOS_{LVL}$ Voltage	$V_{REF}$ to $V_{CC}$
Lead Temperature (soldering, 20sec.)	260°C
Storage Temperature ( $T_s$ )	-65°C to +150°C

**Operating Ratings<sup>(2)</sup>**

Supply Voltage ( $V_{CC}$ )	+3.0V to +3.6V
Ambient Temperature ( $T_A$ )	-40°C to +85°C
Junction Temperature ( $T_J$ )	-40°C to +125°C
Junction Thermal Resistance <sup>(3)</sup>	
QFN ( $\theta_{JA}$ )	
Still-air	61°C/W
QFN ( $\Psi_{JB}$ )	
Junction-to-board	38°C/W

**DC Electrical Characteristics**

$V_{CC} = 3.0V$  to  $3.6V$ ;  $R_L = 50\Omega$  to  $V_{CC}$ ;  $T_A = -40^\circ C$  to  $+85^\circ C$ .

Symbol	Parameter	Condition	Min	Typ	Max	Units
$I_{CC}$	Power Supply Current	No output load		42	62	mA
$LOS_{LVL}$	$LOS_{LVL}$ Voltage		$V_{REF}$		$V_{CC}$	V
$V_{OH}$	CML Output HIGH Voltage		$V_{CC}-0.020$	$V_{CC}-0.005$	$V_{CC}$	V
$V_{OL}$	CML Output LOW Voltage	$V_{CC} = 3.3V$	$V_{CC}-0.475$	$V_{CC}-0.400$	$V_{CC}-0.350$	V
$V_{OFFSET}$	Differential Output Offset				$\pm 80$	mV
$V_{REF}$	Reference Voltage			$V_{CC}-1.28$		V
$V_{IHCMR}$	Input Common Mode Range		GND+2.0		$V_{CC}$	V

**TTL DC Electrical Characteristics**

$V_{CC} = 3.0V$  to  $3.6V$ ;  $R_L = 50\Omega$  to  $V_{CC}$ ;  $T_A = -40^\circ C$  to  $+85^\circ C$ .

Symbol	Parameter	Condition	Min	Typ	Max	Units
$V_{IH}$	/EN Input HIGH Voltage		2.0			
$V_{IL}$	/EN Input LOW Voltage				0.8	V
$I_{IH}$	/EN Input HIGH Current	$V_{IN} = 2.7V$ $V_{IN} = V_{CC}$			20 100	$\mu A$ $\mu A$
$I_{IL}$	/EN Input LOW Current	$V_{IN} = 0.5V$	-300			$\mu A$
$V_{OH}$	LOS Output High Level	$V_{OUT} \geq 3.3V$ , $I_{OH(MAX)} < 160\mu A$ $V_{OUT} < 3.3V$ , $I_{OH(MAX)} < 160\mu A$	2.4 2.0			V V
$V_{OL}$	LOS Output LOW Level	Sinking 2mA			0.5	V

**Notes:**

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. Package thermal resistance assumes exposed pad is soldered (or equivalent) to the device's most negative potential (GND) on the PCB.  $\Psi_{JB}$  uses 4-layer ( $\theta_{JA}$ ) in still-air-number, unless otherwise stated.

## AC Electrical Characteristics

$S_{21}$	Single-ended Small-Signal Gain		34	40		dB

### Notes:

- Amplifier in limiting mode. Input is a 200MHz square wave.
- Deterministic jitter measured using 3.2Gbps K28.5 pattern,  $V_{ID} = 10mV_{PP}$ .
- Random jitter measured using 3.2Gbps K28.7 pattern,  $V_{ID} = 10mV_{PP}$ .
- This specification defines electrical hysteresis as  $20\log$  (LOS De-assert/LOS Assert). The ratio between optical hysteresis and electrical hysteresis is found to vary between 1.5 and 2, depending upon the level of received optical power and ROSA characteristics. Based upon that ratio, the optical hysteresis corresponding to the electrical hysteresis range 2dB-4.5dB, as shown in the AC characteristics table, will be 1dB-3dB.
- See "Typical Operating Characteristics" for a graph showing how to choose a particular  $R_{LOSLVL}$  for a particular LOS assert and its associated de-assert amplitude.

## Detailed Description

The SY88289HL high-sensitivity limiting post amplifier operates from a single +3.3V power supply, over temperatures from  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . Signals with data rates up to 3.2Gbps and as small as  $4\text{mV}_{\text{PP}}$  can be amplified. Figure 1 shows the allowed input voltage swing. The SY88289HL generates a LOS output.  $\text{LOS}_{\text{LVL}}$  sets the sensitivity of the input amplitude detection.

### Input Amplifier/Buffer

Figure 2 shows a simplified schematic of the SY88289HL's input stage. The high-sensitivity of the input amplifier allows signals as small as  $4\text{mV}_{\text{PP}}$  to be detected and amplified. The input amplifier also allows input signals as large as  $1800\text{mV}_{\text{PP}}$ . Input signals below  $6\text{mV}_{\text{PP}}$  are linearly amplified with a typical 46dB differential voltage gain. Since it is a limiting amplifier, the SY88289HL outputs typically  $800\text{mV}_{\text{PP}}$  voltage-limited waveforms for input signals that are greater than  $6\text{mV}_{\text{PP}}$ . Applications requiring the SY88289HL to operate with high-gain should have the upstream TIA placed as close as possible to the SY88289HL's input pins to ensure the best performance of the device.

### Output Buffer

The SY88289HL's CML output buffer is designed to drive  $50\Omega$  lines. The output buffer requires appropriate termination for proper operation. An external  $50\Omega$  resistor to  $V_{\text{CC}}$  for each output pin provides this. Figure 3 shows a simplified schematic of the output stage.

## Loss-of-Signal

The SY88289HL generates a chatter-free LOS open-collector TTL output with an internal  $4.75\text{k}\Omega$  pull-up resistor, as shown in Figure 4. LOS is used to determine that the input amplitude is large enough to be considered a valid input. LOS asserts high if the input amplitude falls below the threshold sets by  $\text{LOS}_{\text{LVL}}$  and de-asserts low otherwise. LOS can be fed back to the enable bar (/EN) input to maintain output stability under a loss of signal condition. /EN de-asserts the true output signal without removing the input signals. Typically, 3.5dB LOS hysteresis is provided to prevent chattering.

### Loss-of-Signal Level Set

A programmable LOS level-set pin ( $\text{LOS}_{\text{LVL}}$ ) sets the threshold of the input amplitude detection. Connecting an external resistor between  $V_{\text{CC}}$  and  $\text{LOS}_{\text{LVL}}$  sets the voltage at  $\text{LOS}_{\text{LVL}}$ . This voltage ranges from  $V_{\text{CC}}$  to  $V_{\text{REF}}$ . The external resistor creates a voltage divider between  $V_{\text{CC}}$  and  $V_{\text{REF}}$ , as shown in Figure 5.

### Hysteresis

The SY88289HL typically provides 3.5dB LOS electrical hysteresis. By definition, a power ratio measured in dB is  $10\log(\text{power ratio})$ . Power is calculated as  $V_{\text{IN}}^2/R$  for an electrical signal. Hence, the same ratio can be stated as  $20\log(\text{voltage ratio})$ . While in linear mode, the electrical voltage input changes linearly with the optical power and therefore, the ratios change linearly. Thus, the optical hysteresis in dB is half the electrical hysteresis in dB given in the data sheet. Since the SY88289HL is an electrical device, this data sheet refers to hysteresis in electrical terms. With 3.5dB LOS hysteresis, a voltage factor of 1.5 is required to assert or de-assert LOS.

### NOTE:

1. ALL DIMENSIONS ARE IN MILLIMETERS.
  2. MAX. PACKAGE WARPAGE IS 0.05 mm.
  3. MAXIMUM ALLOWABLE BURRS IS 0.076 mm IN ALL DIRECTIONS.
  4. PIN #1 ID ON TOP WILL BE LASER/INK MARKED.
- ⚠ APPLIED ONLY FOR TERMINALS.
- ⚠ APPLIED FOR EXPOSED PAD AND TERMINALS.

### 16-Pin (3mm x 3mm) QFN

**PCB Thermal Consideration for 16-Pin QFN Package**

**Package Notes:**

1. Package meets Level 2 qualification.
2. All parts are dry-packaged before shipment.
3. Exposed pad must be soldered to a ground for proper thermal management.
