$I_{hold}$  = Hold current; maximum current device will pass without tripping in 20°C still air.

$I_{trip}$  = Trip current; minimum current at which the device will trip in 20°C still air.

$V_{max}$  = Maximum voltage device can withstand without damage at rated current ( $I_{max}$ )

$I_{max}$  = Maximum fault current device can withstand without damage at rated voltage ( $V_{max}$ )

$P_d$  = Power dissipated from device when in the tripped state at 20°C still air.

$R_{min}$  = Minimum resistance of device in initial (un-soldered) state.

$R_{typ}$  = Typical resistance of device in initial (un-soldered) state.

$R_{1max}$  = Maximum resistance of device at 20°C measured one hour after tripping or reflow soldering of 260°C for 20 sec.

**Caution:** Operation beyond the specified rating may result in damage and possible arcing and flame.

<sup>1</sup> Some older references to these devices may include “-C” in the Part Number. The “-C” should be omitted when placing new orders for the device.

<sup>2</sup> Part Number with note 2 tested and complied with AEC Q200.

# 1812L Series

## Surface Mount

### Temperature Derating

| Part Number      | Ambient Operation Temperature |       |      |      |      |      |      |      |      |

# 1812L Series

## Surface Mount

### Temperature Derating Curve

Note: Typical Temperature derating curve, refer to table for derating data

### Physical Specifications

|                           |                                                              |
|---------------------------|--------------------------------------------------------------|
| <b>Terminal Material</b>  | Solder-Plated Copper (Solder Material: Matte Tin (Sn))       |
| <b>Lead Solderability</b> | Meets EIA Specification RS186-9E, ANSI/J-STD-002 Category 3. |

### Environmental Specifications

|                                                   |                                                                                   |
|---------------------------------------------------|-----------------------------------------------------------------------------------|
| <b>Operating Temp.</b>                            | -40°C to +85°C                                                                    |
| <b>Max. Device Surface Temp. in Tripped State</b> | 125°C                                                                             |
| <b>Passive Aging</b>                              | +85°C, 1000 hours<br>-/+5% typical resistance change                              |
| <b>Humidity Aging</b>                             | +85°C, 85% R.H., 1000 hours<br>-/+5% typical resistance change                    |
| <b>Thermal Shock</b>                              | MIL-STD-202, Method 107<br>+85°C/-40°C 20 times<br>-30% typical resistance change |
| <b>Solvent Resistance</b>                         | MIL-STD-202, Method 215,<br>No change                                             |
| <b>Vibration</b>                                  | MIL-STD-883, Method 2007,<br>Condition A, No change                               |
| <b>Moisture Level Sensitivity</b>                 | Level 1, J-STD-020                                                                |

### Soldering Parameters

|                                                      |                                  |                         |
|------------------------------------------------------|----------------------------------|-------------------------|
| Profile Feature                                      |                                  | Pb-Free Assembly        |
| Average Ramp-Up Rate ( $T_{s(max)}$ to $T_p$ )       |                                  | 3°C/second max          |
| Pre Heat:                                            | Temperature Min ( $T_{s(min)}$ ) | 150°C                   |
|                                                      | Temperature Max ( $T_{s(max)}$ ) | 200°C                   |
|                                                      | Time (Min to Max) ( $t_s$ )      | 60 – 180 secs           |
| Time Maintained Above:                               | Temperature ( $T_L$ )            | 217°C                   |
|                                                      | Temperature ( $t_L$ )            | 60 – 150 seconds        |
| Peak / Classification Temperature ( $T_p$ )          |                                  | 260 <sup>+0/-5</sup> °C |
| Time within 5°C of actual peak Temperature ( $t_p$ ) |                                  | 20 – 40 seconds         |
| Ramp-down Rate                                       |                                  | 6°C/second max          |
| Time 25°C to peak Temperature ( $T_p$ )              |                                  | 8 minutes Max.          |

- All temperature refer to topside of the package, measured on the package body surface
- If reflow temperature exceeds the recommended profile, devices may not meet the performance requirements
- Recommended reflow methods: IR, vapor phase oven, hot air oven,  $N_2$  environment for lead
- Recommended maximum paste thickness is 0.25mm (0.010inch)
- Devices can be cleaned using standard industry methods and solvents
- Devices can be reworked using the standard industry practices

## Surface Mount

### Average Time Current Curves

The average time current curves and Temperature Derating curve performance is affected by a number of variables, and these curves provided as guidance only. Customer must verify the performance in their application.

#### Warning

- Users shall independently assess the suitability of these devices for each of their applications
- Operation of these devices beyond the stated maximum ratings could result in damage to the devices and lead to electrical arcing and/or fire
- These devices are intended to protect against the effects of temporary over-current or over-temperature conditions and are not intended to perform as protective devices where such conditions are expected to be repetitive or prolonged in duration
- Exposure to silicon-based oils, solvents, electrolytes, acids, and similar materials can adversely affect the performance of these PPTC devices
- These devices undergo thermal expansion under fault conditions, and thus shall be provided with adequate space and be protected against mechanical stresses
- Circuits with inductance may generate a voltage (L di/dt) above the rated voltage of the PPTC device.
