

## General Description

PSoC® 4 is a scalable and reconfigurable platform architecture for a family of programmable embedded system controllers with an Arm® Cortex®-M0 CPU. It combines programmable and reconfigurable analog and digital blocks with flexible automatic routing. The PSoC 4200\_BLE product family, based on this platform, is a combination of a microcontroller with an integrated Bluetooth Low Energy (BLE), also known as Bluetooth Smart, radio and subsystem (BLESS). The other features include digital programmable logic, high-performance analog-to-digital conversion (ADC), opamps with Comparator mode, and standard communication and timing peripherals. The programmable analog and digital subsystems allow flexibility and in-field tuning of the design.

## Features

### 32-bit MCU Subsystem

- 48-MHz Arm Cortex-M0 CPU with single-cycle multiply and DMA
- Up to 256 KB of flash with Read Accelerator
- Up to 32 KB of SRAM

### BLE Radio and Subsystem

- BLE 4.2 support
- 2.4-GHz RF transceiver with 50-Ω antenna drive
- Digital PHY
- Link-Layer engine supporting master and slave modes
- RF output power: -18 dBm to +3 dBm
- RX sensitivity: -89 dBm
- RX current: 18.7 mA
- TX current: 15.6 mA at 0 dBm
- RSSI: 1-dB resolution

### Programmable Analog

- Four opamps with reconfigurable high-drive external and high-bandwidth internal drive, Comparator modes, and ADC input buffering capability. Can operate in Deep Sleep mode.
- 12-bit, 1-Msps SAR ADC with differential and single-ended modes; Channel Sequencer with signal averaging
- Two current DACs (IDACs) for general-purpose or capacitive sensing applications on any pin
- Two low-power comparators that operate in Deep Sleep mode

### Programmable Digital

- Four programmable logic blocks called universal digital blocks, (UDBs), each with eight macrocells and data path
- Cypress-provided peripheral component library, user-defined state machines, and Verilog input

### Power Management

- Active mode: 1.7 mA at 3-MHz flash program execution
- Deep Sleep mode: 1.5 µA with watch crystal oscillator (WCO) on
- Hibernate mode: 150 nA with RAM retention
- Stop mode: 60 nA

### Capacitive Sensing

- Cypress Capacitive Sigma-Delta (CSD) provides best-in-class SNR (>5:1) and liquid tolerance
- Cypress-supplied software component makes capacitive sensing design easy
- Automatic hardware tuning algorithm (SmartSense™)

### Segment LCD Drive

- LCD drive supported on all pins (common or segment)
- Operates in Deep Sleep mode with four bits per pin memory

### Serial Communication

- Two independent run-time reconfigurable serial communication blocks (SCBs) with reconfigurable I<sup>2</sup>C, SPI, or UART functionality

### Timing and Pulse-Width Modulation

- Four 16-bit timer/counter pulse-width modulator (TCPWM) blocks
- Center-aligned, Edge, and Pseudo-random modes
- Comparator-based triggering of Kill signals for motor drive and other high-reliability digital logic applications

### Up to 36 Programmable GPIOs

- 7 mm × 7 mm 56-pin QFN package
- 76-ball CSP package
- 68-ball CSP package
- Any GPIO pin can be CapSense, LCD, analog, or digital
- Two overvoltage-tolerant (OVT) pins; drive modes, strengths, and slew rates are programmable

### PSoC Creator™ Design Environment

- Integrated Design Environment (IDE) provides schematic design entry and build (with analog and digital automatic routing)
- API components for all fixed-function and programmable peripherals

### Industry-Standard Tool Compatibility

- After schematic entry, development can be done with Arm-based industry-standard development tools

## More Information

Cypress provides a wealth of data at <http://www.cypress.com> to help you to select the right PSoC device for your design, and to help you to quickly and effectively integrate the device into your design. For a comprehensive list of resources, see the introduction page for [Bluetooth® Low Energy \(BLE\) Products](#). Following is an abbreviated list for PSoC BLE:

- Overview: PSoC Portfolio, PSoC Roadmap
- Product Selectors: PSoC 1, PSoC 3, PSoC 4, PSoC BLE, PSoC 4 BLE, PSoC 5LP In addition, PSoC Creator includes a device selection tool.
- Application Notes: Cypress offers a large number of PSoC application notes covering a broad range of topics, from basic to advanced level. Recommended application notes for getting started with PSoC BLE are:
  - [AN94020](#): Getting Started with PSoC BLE
  - [AN97060](#): PSoC 4 BLE and PSoC BLE - Over-The-Air (OTA) Device Firmware Upgrade (DFU) Guide
  - [AN91184](#): PSoC 4 BLE - Designing BLE Applications
  - [AN91162](#): Creating a BLE Custom Profile
  - [AN91445](#): Antenna Design and RF Layout Guidelines
  - [AN96841](#): Getting Started With EZ-BLE Module

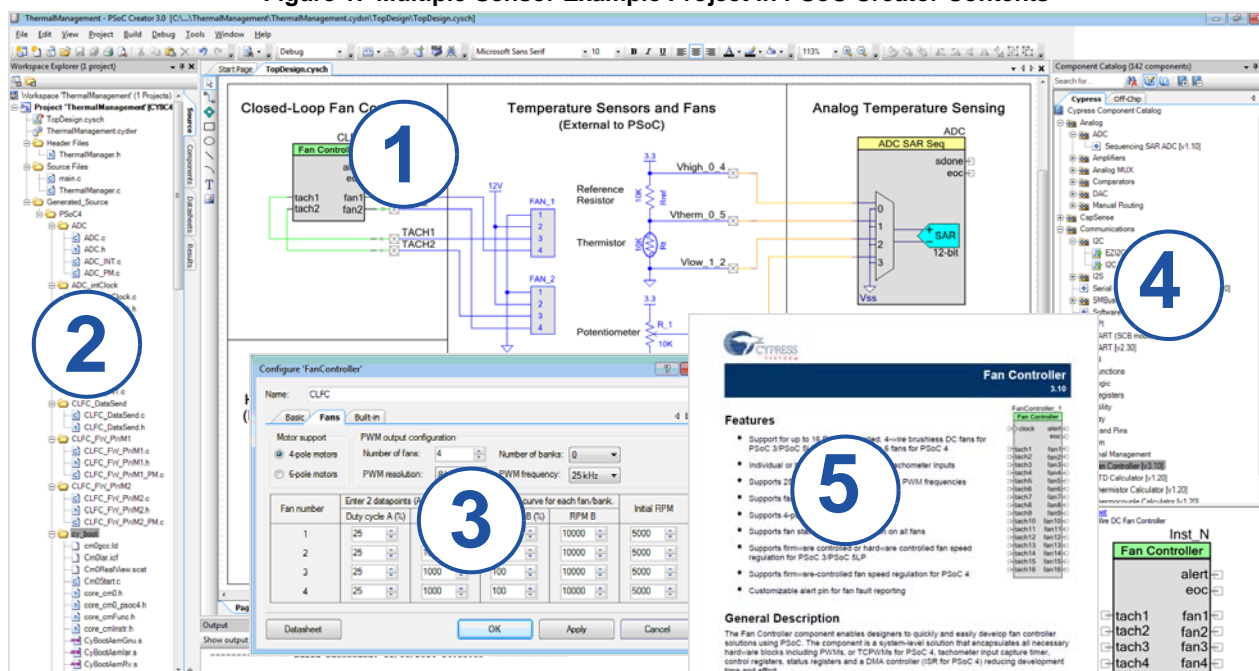

- [AN85951](#): PSoC 4 CapSense Design Guide
- [AN95089](#): PSoC 4/PRoC BLE Crystal Oscillator Selection and Tuning Techniques
- [AN92584](#): Designing for Low Power and Estimating Battery Life for BLE Applications
- Technical Reference Manual (TRM) is in two documents:
  - [Architecture TRM](#) details each PSoC BLE functional block
  - [Registers TRM](#) describes each of the PSoC BLE registers
- Development Kits:
  - [CY8CKIT-042-BLE-A](#) Pioneer Kit, is a flexible, Arduino-compatible, Bluetooth LE development kit for PSoC 4 BLE and PSoC BLE.
  - [CY8CKIT-142](#), PSoC 4 BLE Module, features a PSoC 4 BLE device, two crystals for the antenna matching network, a PCB antenna and other passives, while providing access to all GPIOs of the device.
  - [CY8CKIT-143](#), PSoC 4 BLE 256KB Module, features a PSoC 4 BLE 256KB device, two crystals for the antenna matching network, a PCB antenna and other passives, while providing access to all GPIOs of the device.
  - The [MiniProg3](#) device provides an interface for flash programming and debug.

## PSoC Creator

**PSoC Creator** is a free Windows-based Integrated Design Environment (IDE). It enables concurrent hardware and firmware design of PSoC 3, PSoC 4, and PSoC 5LP based systems. Create designs using classic, familiar schematic capture supported by over 100 pre-verified, production-ready PSoC Components; see the [list of component datasheets](#). With PSoC Creator, you can:

1. Drag and drop component icons to build your hardware system design in the main design workspace
2. Codesign your application firmware with the PSoC hardware, using the PSoC Creator IDE C compiler
3. Configure components using the configuration tools
4. Explore the library of 100+ components
5. Review component datasheets

**Figure 1. Multiple-Sensor Example Project in PSoC Creator Contents**

**Figure 2. Block Diagram**

The PSoC 4200\_BLE devices include extensive support for programming, testing, debugging, and tracing both hardware and firmware.

The Arm SWD interface supports all programming and debug features of the device.

Complete debug-on-chip functionality enables full-device debugging in the final system using the standard production device. It does not require special interfaces, debugging pods, simulators, or emulators. Only the standard programming connections are required to fully support debugging.

The PSoC Creator IDE provides fully integrated programming and debugging support for the PSoC 4200\_BLE devices. The SWD interface is fully compatible with industry-standard third-party tools. With the ability to disable debug features, very robust flash protection, and allowing customer-proprietary functionality to be implemented in on-chip programmable blocks, the PSoC 4200\_BLE family provides a level of security not possible with multi-chip application solutions or with microcontrollers.

Debug circuits are enabled by default and can only be disabled in firmware. If not enabled, the only way to re-enable them is to erase the entire device, clear flash protection, and reprogram the device with the new firmware that enables debugging.

Additionally, all device interfaces can be permanently disabled (device security) for applications concerned about phishing attacks due to a maliciously reprogrammed device or attempts to defeat security by starting and interrupting flash programming sequences. Because all programming, debug, and test interfaces are disabled when maximum device security is enabled, PSoC 4200\_BLE with device security enabled may not be returned for failure analysis. This is a trade-off the PSoC 4200\_BLE allows the customer to make.

## Functional Definition

### CPU and Memory Subsystem

#### CPU

The Cortex-M0 CPU in PSoC 4200\_BLE is part of the 32-bit MCU subsystem, which is optimized for low-power operation with extensive clock gating. It mostly uses 16-bit instructions and executes a subset of the Thumb-2 instruction set. This enables fully compatible binary upward migration of the code to higher-performance processors such as Cortex-M3 and M4. The Cypress implementation includes a hardware multiplier that provides a 32-bit result in one cycle. It includes a nested vectored interrupt controller (NVIC) block with 32 interrupt inputs and a wakeup interrupt controller (WIC). The WIC can wake the processor up from the Deep Sleep mode, allowing power to the main processor to be switched off when the chip is in the Deep Sleep mode. The Cortex-M0 CPU provides a nonmaskable interrupt (NMI) input, which is made available to the user when it is not in use for system functions requested by the user.

The CPU also includes an SWD interface, which is a 2-wire form of JTAG; the debug configuration used for PSoC 4200\_BLE has four break-point (address) comparators and two watchpoint (data) comparators.

#### Flash

The PSoC 4200\_BLE device has a flash module with 256 KB of flash memory, tightly coupled to the CPU to improve average access times from the flash block. The flash block is designed to deliver 2 wait-state (WS) access time at 48 MHz and with 1-WS access time at 24 MHz. The flash accelerator delivers 85% of single-cycle SRAM access performance on average. Part of the flash module can be used to emulate EEPROM operation if required. Maximum erase and program time is 20 ms per row (256 bytes). This also applies to the emulated EEPROM.

#### SRAM

SRAM memory is retained during Hibernate.

#### SROM

The 8-KB supervisory ROM contains a library of executable functions for flash programming. These functions are accessed through supervisory calls (SVC) and enable in-system programming of the flash memory.

#### DMA

A DMA engine, with eight channels, is provided that can do 32-bit transfers and has chainable ping-pong descriptors.

### System Resources

#### Power System

The power system is described in detail in the section [Power on page 16](#). It provides an assurance that the voltage levels are as required for the respective modes, and can either delay the mode entry (on power-on reset (POR), for example) until voltage levels are as required or generate resets (brownout detect (BOD)) or interrupts when the power supply reaches a particular programmable level between 1.8 and 4.5 V (low voltage detect (LVD)).

PSoC 4200\_BLE operates with a single external supply (1.71 to 5.5 V without radio, and 1.9 V to 5.5 V with radio). The device has five different power modes; transitions between these modes are managed by the power system. PSoC 4200\_BLE provides Sleep, Deep Sleep, Hibernate, and Stop low-power modes. Refer to the *Technical Reference Manual* for more details.

#### Clock System

The PSoC 4200\_BLE clock system is responsible for providing clocks to all subsystems that require clocks and for switching between different clock sources without glitching. In addition, the clock system ensures that no metastable conditions occur.

The clock system for PSoC 4200\_BLE consists of the internal main oscillator (IMO), the internal low-speed oscillator (ILO), the 24-MHz external crystal oscillator (ECO) and the 32-kHz watch crystal oscillator (WCO). In addition, an external clock may be supplied from a pin.

#### IMO Clock Source

The IMO is the primary source of internal clocking in PSoC 4200\_BLE. It is trimmed during testing to achieve the specified accuracy. Trim values are stored in nonvolatile latches (NVL). Additional trim settings from flash can be used to compensate for changes. The IMO default frequency is 24 MHz and it can be adjusted between 3 to 48 MHz in steps of 1 MHz. The IMO tolerance with Cypress-provided calibration settings is  $\pm 2\%$ .

#### ILO Clock Source

The ILO is a very low-power oscillator, which is primarily used to generate clocks for the peripheral operation in the Deep Sleep mode. ILO-driven counters can be calibrated to the IMO to improve accuracy. Cypress provides a software component, which does the calibration.

#### External Crystal Oscillator (ECO)

The ECO is used as the active clock for the BLE subsystem to meet the  $\pm 50$ -ppm clock accuracy of the Bluetooth 4.2 Specification. PSoC 4200\_BLE includes a tunable load capacitor to tune the crystal clock frequency by measuring the actual clock frequency. The high-accuracy ECO clock can also be used as a system clock.

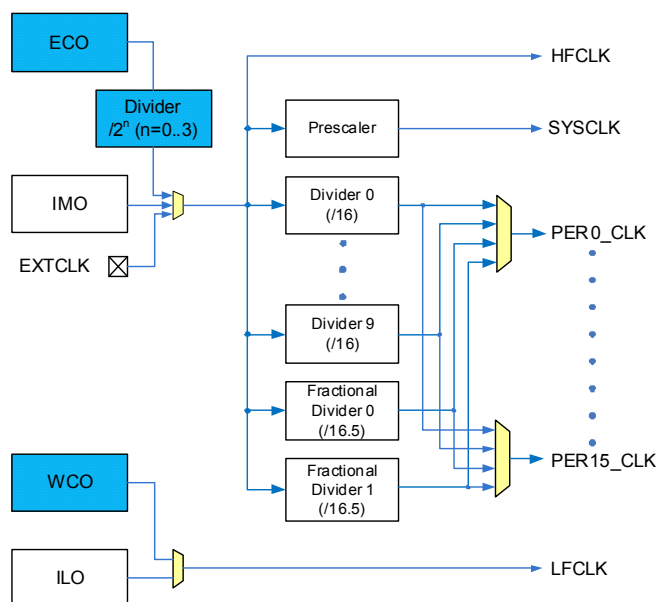

#### Watch Crystal Oscillator (WCO)

The WCO is used as the sleep clock for the BLE subsystem to meet the  $\pm 500$ -ppm clock accuracy for the Bluetooth 4.2 Specification. The sleep clock provides an accurate sleep timing and enables wakeup at the specified advertisement and connection intervals. The WCO output can be used to realize the real-time clock (RTC) function in firmware.

#### Watchdog Timer

A watchdog timer is implemented in the clock block running from the ILO or from the WCO; this allows the watchdog operation during Deep Sleep and generates a watchdog reset if not serviced before the timeout occurs. The watchdog reset is recorded in the Reset Cause register. With the WCO and firmware, an accurate real-time clock (within the bounds of the 32-kHz crystal accuracy) can be realized.

**Figure 3. PSoC 4200\_BLE MCU Clocking Architecture**

The HFCLK signal can be divided down (see Figure 3) to generate synchronous clocks for the UDBs, and the analog and digital peripherals. There are a total of 12 clock dividers for PSoC 4200\_BLE: ten with 16-bit divide capability and two with 16.5-bit divide capability. This allows the generation of 16 divided clock signals, which can be used by peripheral blocks. The analog clock leads the digital clocks to allow analog events to occur before the digital clock-related noise is generated. The 16-bit and 16.5-bit dividers allow a lot of flexibility in generating fine-grained frequency values and are fully supported in PSoC Creator.

#### Reset

PSoC 4200\_BLE device can be reset from a variety of sources including a software reset. Reset events are asynchronous and guarantee reversion to a known state. The reset cause is recorded in a register, which is sticky through resets and allows the software to determine the cause of the reset. An XRES pin is reserved for an external reset to avoid complications with the configuration and multiple pin functions during power-on or reconfiguration. The XRES pin has an internal pull-up resistor that is always enabled.

#### Voltage Reference

The PSoC 4200\_BLE reference system generates all internally required references. A one-percent voltage reference spec is provided for the 12-bit ADC. To allow better signal-to-noise ratios (SNR) and better absolute accuracy, it is possible to bypass the internal reference using a GPIO pin or use an external reference for the SAR. Refer to Table 19, "SAR ADC AC Specifications," on page 26 for details.

## BLE Radio and Subsystem

PSoC 4200\_BLE incorporates a Bluetooth Smart subsystem that contains the Physical Layer (PHY) and Link Layer (LL) engines with an embedded AES-128 security engine. The physical layer consists of the digital PHY and the RF transceiver that transmits and receives GFSK packets at 1 Mbps over a 2.4-GHz ISM band, which is compliant with Bluetooth Smart Bluetooth Specification 4.2. The baseband controller is a composite hardware and firmware implementation that supports both master and slave modes. Key protocol elements, such as HCI and link control, are implemented in firmware. Time-critical functional blocks, such as encryption, CRC, data whitening, and access code correlation, are implemented in hardware (in the LL engine).

The RF transceiver contains an integrated balun, which provides a single-ended RF port pin to drive a 50-Ω antenna via a matching/filtering network. In the receive direction, this block converts the RF signal from the antenna to a digital bit stream after performing GFSK demodulation. In the transmit direction, this block performs GFSK modulation and then converts a digital baseband signal to a radio frequency before transmitting it to air through the antenna.

The Bluetooth Smart Radio and Subsystem (BLESS) requires a 1.9-V minimum supply (the range varies from 1.9 V to 5.5 V).

Key features of BLESS are as follows:

- Master and slave single-mode protocol stack with logical link control and adaptation protocol (L2CAP), attribute (ATT), and security manager (SM) protocols
- API access to generic attribute profile (GATT), generic access profile (GAP), and L2CAP
- L2CAP connection-oriented channel
- GAP features
  - Broadcaster, Observer, Peripheral, and Central roles
  - Security mode 1: Level 1, 2, 3, and 4
  - Security mode 2: Level 1 and 2
  - User-defined advertising data
  - Multiple bond support
- GATT features
  - GATT client and server
  - Supports GATT sub-procedures
  - 32-bit universally unique identifier (UUID)
- Security Manager (SM)
  - Pairing methods: Just works, Passkey Entry, Out of Band and Numeric Comparison
  - Authenticated man-in-the-middle (MITM) protection and data signing
  - LE Secure Connections (Bluetooth 4.2 feature)
- Link Layer (LL)
  - Master and Slave roles
  - 128-bit AES engine
  - Encryption
  - Low-duty cycle advertising
  - LE Ping
  - LE Data Packet Length Extension (Bluetooth 4.2 feature)
  - Link Layer Privacy (with extended scanning filter policy, Bluetooth 4.2 feature)
- Supports all SIG-adopted BLE profiles

## Analog Blocks

### 12-bit SAR ADC

The 12-bit, 1-Msps SAR ADC can operate at a maximum clock rate of 18 MHz and requires a minimum of 18 clocks at that frequency to do a 12-bit conversion.

The block functionality is augmented for the user by adding a reference buffer to it (trimmable to  $\pm 1\%$ ) and by providing the choice of three internal voltage references,  $V_{DD}$ ,  $V_{DD}/2$ , and  $V_{REF}$  (nominally 1.024 V), as well as an external reference through a GPIO pin. The Sample-and-Hold (S/H) aperture is programmable; it allows the gain bandwidth requirements of the amplifier driving the SAR inputs, which determine its settling time, to be relaxed if required. System performance will be 65 dB for true 12-bit precision provided appropriate references are used and system noise levels permit it. To improve the performance in noisy conditions, it is possible to provide an external bypass (through a fixed pin location) for the internal reference amplifier.

The SAR is connected to a fixed set of pins through an 8-input sequencer. The sequencer cycles through the selected channels autonomously (sequencer scan) and does so with zero switching overhead (that is, the aggregate sampling bandwidth is equal to 1 Msps whether it is for a single channel or distributed over several channels). The sequencer switching is effected through a state machine or through firmware-driven switching. A feature provided by the sequencer is the buffering of each channel to reduce CPU interrupt-service requirements. To accommodate signals with varying source impedances and frequencies, it is possible to have different sample times programmable for each channel. Also, the signal range specification through a pair of range registers (low and high range values) is implemented with a corresponding out-of-range interrupt if the digitized value exceeds the programmed range; this allows fast detection of out-of-range values without having to wait for a sequencer scan to be completed and the CPU to read the values and check for out-of-range values in software.

The SAR is able to digitize the output of the on-chip temperature sensor for calibration and other temperature-dependent functions. The SAR is not available in Deep Sleep and Hibernate modes as it requires a high-speed clock (up to 18 MHz). The SAR operating range is 1.71 to 5.5 V.

**Figure 4. SAR ADC System Diagram**

### Opamps (CTBm Block)

PSoC 42X8\_BLE has four opamps with Comparator modes, which allow most common analog functions to be performed on-chip, eliminating external components. PGAs, voltage buffers, filters, transimpedance amplifiers, and other functions can be realized with external passives saving power, cost, and space. The on-chip opamps are designed with enough bandwidth to drive the sample-and-hold circuit of the ADC without requiring external buffering.

### Temperature Sensor

PSoC 4200\_BL has an on-chip temperature sensor. This consists of a diode, which is biased by a current source that can be disabled to save power. The temperature sensor is connected

to the ADC, which digitizes the reading and produces a temperature value by using a Cypress-supplied software that includes calibration and linearization.

### Low-Power Comparators

PSoC 4200\_BL has a pair of low-power comparators, which can also operate in Deep Sleep and Hibernate modes. This allows the analog system blocks to be disabled while retaining the ability to monitor external voltage levels during low-power modes. The comparator outputs are normally synchronized to avoid metastability unless operating in an asynchronous power mode (Hibernate) where the system wake-up circuit is activated by a comparator-switch event.

## Fixed-Function Digital

### Timer/Counter/PWM Block

The timer/counter/PWM block consists of four 16-bit counters with user-programmable period length. There is a Capture register to record the count value at the time of an event (which may be an I/O event), a period register which is used to either stop or auto-reload the counter when its count is equal to the period register, and compare registers to generate compare value signals which are used as PWM duty cycle outputs. The block also provides true and complementary outputs with programmable offset between them to allow the use as deadband programmable complementary PWM outputs. It also has a Kill input to force outputs to a predetermined state; for example, this is used in motor-drive systems when an overcurrent state is indicated and the PWMs driving the FETs need to be shut off immediately with no time for software intervention.

### Serial Communication Blocks (SCB)

PSoC 4200\_BLE has two SCBs, each of which can implement an I<sup>2</sup>C, UART, or SPI interface.

**I<sup>2</sup>C Mode:** The hardware I<sup>2</sup>C block implements a full multi-master and slave interface (it is capable of multimaster arbitration). This block is capable of operating at speeds of up to 1 Mbps (Fast Mode Plus) and has flexible buffering options to reduce the interrupt overhead and latency for the CPU. It also supports EzI<sup>2</sup>C that creates a mailbox address range in the memory of PSoC 4200\_BLE and effectively reduces the I<sup>2</sup>C communication to reading from and writing to an array in the memory. In addition, the block supports an 8-deep FIFO for receive and transmit, which, by increasing the time given for the CPU to read the data, greatly reduces the need for clock stretching caused by the CPU not having read the data on time. The FIFO mode is available in all channels and is very useful in the absence of DMA.

The I<sup>2</sup>C peripheral is compatible with I<sup>2</sup>C Standard-mode, Fast-mode, and Fast-Mode Plus devices as defined in the NXP I<sup>2</sup>C-bus specification and user manual (UM10204). The I<sup>2</sup>C bus I/O is implemented with GPIO in open-drain modes.

SCB1 is fully compliant with Standard mode (100 kHz), Fast mode (400 kHz), and Fast-Mode Plus (1 MHz) I<sup>2</sup>C signaling specifications when routed to GPIO pins P5[0] and P5[1], except for hot-swap capability during I<sup>2</sup>C active communication. The remaining GPIOs do not meet the hot-swap specification ( $V_{DD}$  off; draw < 10- $\mu$ A current) for Fast mode and Fast-Mode Plus,  $I_{OL}$  Spec (20 mA) for Fast-Mode Plus, hysteresis spec (0.05  $V_{DD}$ ) for Fast mode and Fast-Mode Plus, and minimum fall time spec for Fast mode and Fast-Mode Plus.

- GPIO cells, including P5.0 and P5.1, cannot be hot-swapped or powered up independent of the rest of the I<sup>2</sup>C system.
- The GPIO pins P5.0 and P5.1 are over-voltage tolerant but cannot be hot-swapped or powered up independent of the rest of the I<sup>2</sup>C system
- Fast-Mode Plus has an  $I_{OL}$  specification of 20 mA at a  $V_{OL}$  of 0.4 V. The GPIO cells can sink a maximum of 8 mA  $I_{OL}$  with a  $V_{OL}$  maximum of 0.6 V.

- Fast-mode and Fast-Mode Plus specify minimum Fall times, which are not met with the GPIO cell; the Slow-Strong mode can help meet this spec depending on the bus load.

**UART Mode:** This is a full-feature UART operating at up to 1 Mbps. It supports automotive single-wire interface (LIN), infrared interface (IrDA), and SmartCard (ISO7816) protocols, all of which are minor variants of the basic UART protocol. In addition, it supports the 9-bit multiprocessor mode that allows the addressing of peripherals connected over common RX and TX lines. Common UART functions such as parity error, break detect, and frame error are supported. An 8-deep FIFO allows much greater CPU service latencies to be tolerated. Note that hardware handshaking is not supported. This is not commonly used and can be implemented with a UDB-based UART in the system, if required.

**SPI Mode:** The SPI mode supports full Motorola SPI, TI Secure Simple Pairing (SSP) (essentially adds a start pulse that is used to synchronize SPI Coders), and National Microwire (half-duplex form of SPI). The SPI block can use the FIFO for transmit and receive.

## GPIO

PSoC 4200\_BLE has 36 GPIOs. The GPIO block implements the following:

- Eight drive strength modes:
  - Analog input mode (input and output buffers disabled)
  - Input only
  - Weak pull-up with strong pull-down
  - Strong pull-up with weak pull-down
  - Open drain with strong pull-down
  - Open drain with strong pull-up
  - Strong pull-up with strong pull-down
  - Weak pull-up with weak pull-down
- Input threshold select (CMOS or LVTTTL)
- Pins 0 and 1 of Port 5 are overvoltage-tolerant pins
- Individual control of input and output buffer enabling/disabling in addition to drive-strength modes
- Hold mode for latching previous state (used for retaining the I/O state in Deep Sleep and Hibernate modes)
- Selectable slew rates for dV/dt-related noise control to improve EMI

The pins are organized in logical entities called ports, which are 8-bit in width. During power-on and reset, the blocks are forced to the disable state so as not to crowbar any inputs and/or cause excess turn-on current. A multiplexing network known as a high-speed I/O matrix (HSIOM) is used to multiplex between various signals that may connect to an I/O pin. Pin locations for fixed-function peripherals are also fixed to reduce internal multiplexing complexity (these signals do not go through the DSI network). DSI signals are not affected by this and any pin may be routed to any UDB through the DSI network.

Data output and pin-state registers store, respectively, the values to be driven on the pins and the states of the pins themselves.

Every I/O pin can generate an interrupt if so enabled and each I/O port has an interrupt request (IRQ) and interrupt service routine (ISR) vector associated with it (5 for PSoC 4200\_BLE).

## Special-Function Peripherals

### *LCD Segment Drive*

PSoC 4200\_BL has an LCD controller, which can drive up to four commons and up to 32 segments. It uses full digital methods to drive the LCD segments requiring no generation of internal LCD voltages. The two methods used are referred to as digital correlation and PWM.

The digital correlation method modulates the frequency and levels of the common and segment signals to generate the highest RMS voltage across a segment to light it up or to keep the RMS signal zero. This method is good for STN displays but may result in reduced contrast with TN (cheaper) displays.

The PWM method drives the panel with PWM signals to effectively use the capacitance of the panel to provide the integration of the modulated pulse-width to generate the desired LCD voltage. This method results in higher power consumption but can result in better results when driving TN displays. LCD operation is supported during Deep Sleep mode, refreshing a small display buffer (four bits; one 32-bit register per port).

### *CapSense*

CapSense is supported on all pins in PSoC 4200\_BL through a CapSense Sigma-Delta (CSD) block that can be connected to any pin through an analog mux bus that any GPIO pin can be connected to via an Analog switch. CapSense function can thus be provided on any pin or group of pins in a system under software control. A Component is provided for the CapSense block to make it easy for the user.

The shield voltage can be driven on another mux bus to provide liquid-tolerance capability. Liquid tolerance is provided by driving the shield electrode in phase with the sense electrode to keep the shield capacitance from attenuating the sensed input.

The CapSense block has two IDACs which can be used for general purposes if CapSense is not being used (both IDACs are available in that case) or if CapSense is used without liquid tolerance (one IDAC is available).

## Pinouts

Table 1 shows the pin list for the PSoC 4200\_BLE device. Port 3 consists of the high-speed analog inputs for the SAR mux. All pins support CSD CapSense and analog mux bus connections.

**Table 1. PSoC 4200\_BLE Pin List (QFN Package)**

| Pin | Name         | Type    | Description                                |
|-----|--------------|---------|--|
| 1   | VDDD         | POWER   | 1.71-V to 5.5-V digital supply             |
| 2   | XTAL32O/P6.0 | CLOCK   | 32.768-kHz crystal                         |
| 3   | XTAL32I/P6.1 | CLOCK   | 32.768-kHz crystal or external clock input |
| 4   | XRES         | RESET   | Reset, active LOW                          |
| 5   | P4.0         | GPIO    | Port 4 Pin 0, lcd, csd                     |
| 6   | P4.1         | GPIO    | Port 4 Pin 1, lcd, csd                     |
| 7   | P5.0         | GPIO    | Port 5 Pin 0, lcd, csd                     |
| 8   | P5.1         | GPIO    | Port 5 Pin 1, lcd, csd                     |
| 9   | VSSD         | GROUND  | Digital ground                             |
| 10  | VDDR         | POWER   | 1.9-V to 5.5-V radio supply                |
| 11  | GANT1        | GROUND  | Antenna shielding ground                   |
| 12  | ANT          | ANTENNA | Antenna pin                                |
| 13  | GANT2        | GROUND  | Antenna shielding ground                   |
| 14  | VDDR         | POWER   | 1.9-V to 5.5-V radio supply                |
| 15  | VDDR         | POWER   | 1.9-V to 5.5-V radio supply                |
| 16  | XTAL24I      | CLOCK   | 24-MHz crystal or external clock input     |
| 17  | XTAL24O      | CLOCK   | 24-MHz crystal                             |
| 18  | VDDR         | POWER   | 1.9-V to 5.5-V radio supply                |
| 19  | P0.0         | GPIO    | Port 0 Pin 0, lcd, csd                     |
| 20  | P0.1         | GPIO    | Port 0 Pin 1, lcd, csd                     |
| 21  | P0.2         | GPIO    | Port 0 Pin 2, lcd, csd                     |
| 22  | P0.3         | GPIO    | Port 0 Pin 3, lcd, csd                     |
| 23  | VDDD         | POWER   | 1.71-V to 5.5-V digital supply             |
| 24  | P0.4         | GPIO    | Port 0 Pin 4, lcd, csd                     |
| 25  | P0.5         | GPIO    | Port 0 Pin 5, lcd, csd                     |
| 26  | P0.6         | GPIO    | Port 0 Pin 6, lcd, csd                     |
| 27  | P0.7         | GPIO    | Port 0 Pin 7, lcd, csd                     |
| 28  | P1.0         | GPIO    | Port 1 Pin 0, lcd, csd                     |
| 29  | P1.1         | GPIO    | Port 1 Pin 1, lcd, csd                     |
| 30  | P1.2         | GPIO    | Port 1 Pin 2, lcd, csd                     |
| 31  | P1.3         | GPIO    | Port 1 Pin 3, lcd, csd                     |
| 32  | P1.4         | GPIO    | Port 1 Pin 4, lcd, csd                     |
| 33  | P1.5         | GPIO    | Port 1 Pin 5, lcd, csd                     |
| 34  | P1.6         | GPIO    | Port 1 Pin 6, lcd, csd                     |
| 35  | P1.7         | GPIO    | Port 1 Pin 7, lcd, csd                     |
| 36  | VDDA         | POWER   | 1.71-V to 5.5-V analog supply              |
| 37  | P2.0         | GPIO    | Port 2 Pin 0, lcd, csd                     |
| 38  | P2.1         | GPIO    | Port 2 Pin 1, lcd, csd                     |
| 39  | P2.2         | GPIO    | Port 2 Pin 2, lcd, csd                     |

**Table 1. PSoC 4200\_BLE Pin List (QFN Package) (continued)**

| Pin | Name | Type   | Description  |
|-----|------|--------|--|
| 40  | P2.3 | GPIO   | Port 2 Pin 3, lcd, csd                               |
| 41  | P2.4 | GPIO   | Port 2 Pin 4, lcd, csd                               |
| 42  | P2.5 | GPIO   | Port 2 Pin 5, lcd, csd                               |
| 43  | P2.6 | GPIO   | Port 2 Pin 6, lcd, csd                               |
| 44  | P2.7 | GPIO   | Port 2 Pin 7, lcd, csd                               |
| 45  | VREF | REF    | 1.024-V reference                                    |

| J8  | NO CONNECT | —       | —                                      |

High-speed I/O matrix (HSIOM) is a group of high-speed switches that routes GPIOs to the resources inside the device. These resources include CapSense, TCPWMs, I<sup>2</sup>C, SPI, UART, and LCD. HSIOM\_PORT\_SELx are 32-bit-wide registers that control the routing of GPIOs. Each register controls one port; four dedicated bits are assigned to each GPIO in the port. This provides up to 16 different options for GPIO routing as shown in Table 3.

**Table 3. HSIOM Port Settings**

| Value | Description   |
|-------|---|
| 0     | Firmware-controlled GPIO  |
| 1     | Output is firmware-controlled, but Output Enable (OE) is controlled from DSI. |
| 2     | Both output and OE are controlled from DSI.                                   |
| 3     | Output is controlled from DSI, but OE is firmware-controlled.                 |
| 4     | Pin is a CSD sense pin  |
| 5     | Pin is a CSD shield pin   |
| 6     | Pin is connected to AMUXA   |
| 7     | Pin is connected to AMUXB   |
| 8     | Pin-specific Active function #0   |
| 9     | Pin-specific Active function #1   |
| 10    | Pin-specific Active function #2   |

**Table 3. HSIOM Port Settings (continued)**

| Value | Description                         |
|-------|-------------------------------------|
| 11    | Reserved                            |
| 12    | Pin is an LCD common pin            |
| 13    | Pin is an LCD segment pin           |
| 14    | Pin-specific Deep-Sleep function #0 |
| 15    | Pin-specific Deep-Sleep function #1 |

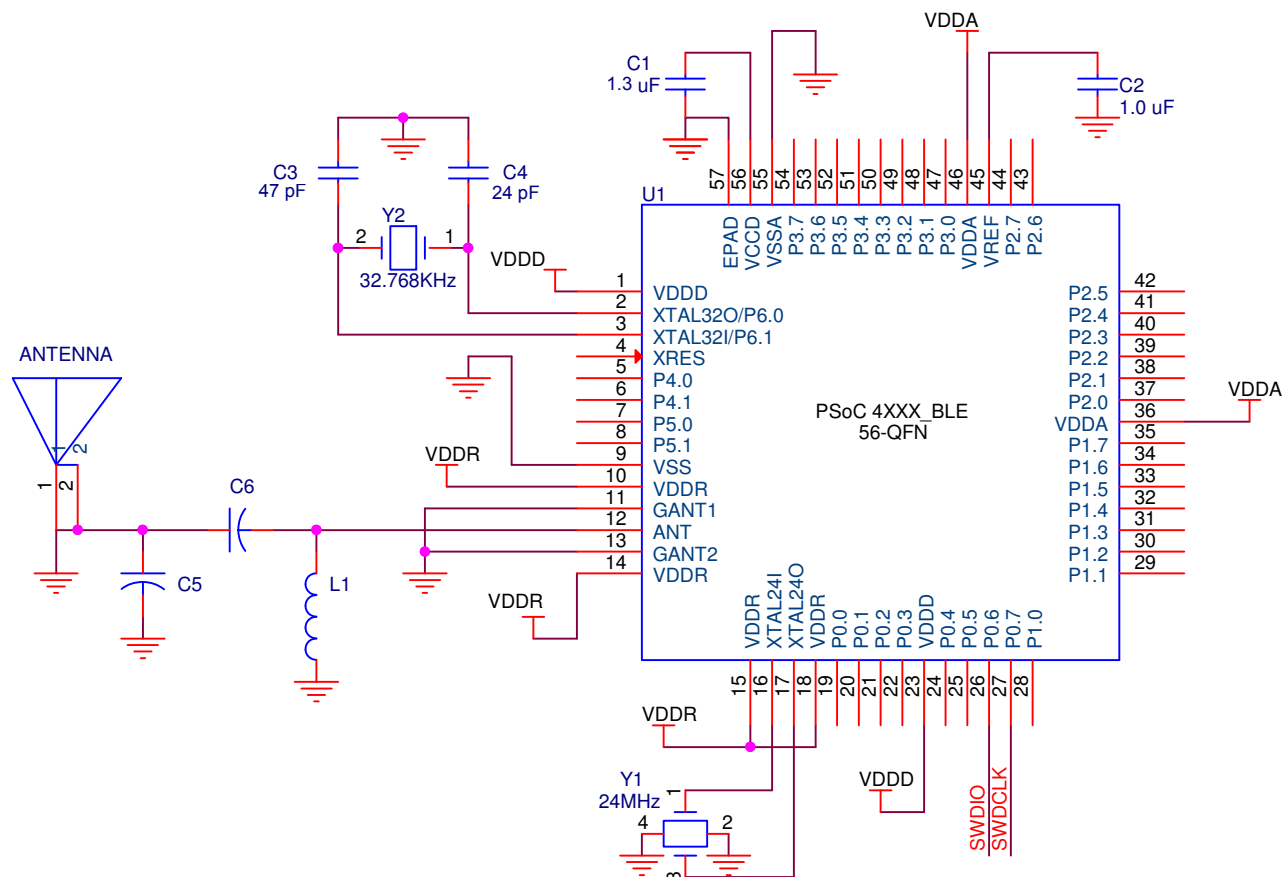

The selection of peripheral function for different GPIO pins is given in [Table 4](#).

**Table 4. Port Pin Connections**

| Name         | Analog        | Digital |             |                  |                           |                 |                  |
|--------------|---------------|---------|-------------|------------------|---------------------------|-----------------|------------------|
|              |               | GPIO    | Active #0   | Active #1        | Active #2                 | Deep Sleep #0   | Deep Sleep #1    |
| P0.0         | COMP0_INP     | GPIO    | TCPWM0_P[3] | SCB1_UART_RX[1]  | –                         | SCB1_I2C_SDA[1] | SCB1_SPI_MOSI[1] |

| P3.7         | SARMUX_7      | GPIO    | TCPWM3_N[2] | SCB1_UART_CTS[2] | –                         | –               | WCO_OUT[0]       |
| P4.0         | CMOD          | GPIO    | TCPWM0_P[0] | SCB1_UART_RTS[0] | –                         | –               | SCB1_SPI_MOSI[0] |
| P4.1         | CTANK         | GPIO    | TCPWM0_N[0] | SCB1_UART_CTS[0] | –                         | –               | SCB1_SPI_MISO[0] |
| P5.0         | –             | GPIO    | TCPWM3_P[0] | SCB1_UART_RX[0]  | EXTPA_EN                  | SCB1_I2C_SDA[0] | SCB1_SPI_SS0[0]  |
| P5.1         | –             | GPIO    | TCPWM3_N[0] | SCB1_UART_TX[0]  | EXT_CLK[2]/ECO_OUT[2]     | SCB1_I2C_SCL[0] | SCB1_SPI_SCLK[0] |
| P6.0_XTAL320 | –             | GPIO    | –           | –                | –                         | –               | –                |
| P6.1_XTAL321 | –             | GPIO    | –           | –                | –                         | –               | –                |

The possible pin connections are shown for all analog and digital peripherals (except the radio, LCD, and CSD blocks, which were shown in [Table 1](#)). A typical system application connection diagram is shown in [Figure 7](#).

**Figure 7. System Application Connection Diagram**

## Power

The PSoC 4200\_BL device can be supplied from batteries with a voltage range of 1.9 V to 5.5 V by directly connecting to the digital supply (VDDD), analog supply (VDDA), and radio supply (VDDR) pins. Internal LDOs in the device regulate the supply voltage to the required levels for different blocks. The device has one regulator for the digital circuitry and separate regulators for radio circuitry for noise isolation. Analog circuits run directly from the analog supply (VDDA) input. The device uses separate regulators for Deep Sleep and Hibernate (lowered power supply and retention) modes to minimize the power consumption. The radio stops working below 1.9 V, but the device continues to function down to 1.71 V without RF.

Bypass capacitors must be used from VDDx (x = A, D, or R) to ground. The typical practice for systems in this frequency range is to use a capacitor in the 1- $\mu$ F range in parallel with a smaller capacitor (for example, 0.1  $\mu$ F). Note that these are simply rules of thumb and that, for critical applications, the PCB layout, lead inductance, and the bypass capacitor parasitic should be simulated to design and obtain optimal bypassing.

| Power Supply    | Bypass Capacitors  |
|-----------------|--|
| VDDD            | The internal bandgap may be bypassed with a 1- $\mu$ F to 10- $\mu$ F.           |
| VDDA            | 0.1- $\mu$ F ceramic at each pin plus bulk capacitor 1- $\mu$ F to 10- $\mu$ F.  |
| VDDR            | 0.1- $\mu$ F ceramic at each pin plus bulk capacitor 1- $\mu$ F to 10- $\mu$ F.  |
| VCCD            | 1.3- $\mu$ F ceramic capacitor at the VCCD pin.                                  |
| VREF (optional) | The internal bandgap may be bypassed with a 1- $\mu$ F to 10- $\mu$ F capacitor. |

## Development Support

The PSoC 4200\_BLE family has a rich set of documentation, development tools, and online resources to assist you during your development process. Visit [www.cypress.com/go/psoc4ble](http://www.cypress.com/go/psoc4ble) to find out more.

### Documentation

A suite of documentation supports the PSoC 4200\_BLE family to ensure that you can find answers to your questions quickly. This section contains a list of some of the key documents.

**Software User Guide:** A step-by-step guide for using PSoC Creator. The software user guide shows you how the PSoC Creator build process works in detail, how to use source control with PSoC Creator, and much more.

**Component Datasheets:** The flexibility of PSoC allows the creation of new peripherals (Components) long after the device has gone into production. Component datasheets provide all of the information needed to select and use a particular Component, including a functional description, API documentation, example code, and AC/DC specifications.

**Application Notes:** PSoC application notes discuss a particular application of PSoC in depth; examples include creating standard and custom BLE profiles. Application notes often include example projects in addition to the application note document.

**Technical Reference Manual:** The Technical Reference Manual (TRM) contains all the technical detail you need to use a PSoC device, including a complete description of all PSoC registers. The TRM is available in the Documentation section at [www.cypress.com/psoc4](http://www.cypress.com/psoc4).

### Online

In addition to print documentation, the Cypress PSoC forums connect you with fellow PSoC users and experts in PSoC from around the world, 24 hours a day, 7 days a week.

### Tools

With industry standard cores, programming, and debugging interfaces, the PSoC 4200\_BLE family is part of a development tool ecosystem. Visit us at [www.cypress.com/go/psoccreator](http://www.cypress.com/go/psoccreator) for the latest information on the revolutionary, easy to use PSoC Creator IDE, supported third party compilers, programmers, debuggers, and development kits.

## Electrical Specifications

### Absolute Maximum Ratings

Table 5. Absolute Maximum Ratings<sup>[1]</sup>

| Spec ID# | Parameter                   | Description  | Min  | Typ | Max                   | Units | Details/<br>Conditions                 |
|----------|-----------------------------|--|------|-----|-----------------------|-------|--|
| SID1     | V <sub>DDD_ABS</sub>        | Analog, digital, or radio supply relative to V <sub>SS</sub> (V <sub>SSD</sub> = V <sub>SSA</sub> )                | −0.5 | –   | 6                     | V     | Absolute max                           |
| SID2     | V <sub>CCD_ABS</sub>        | Direct digital core voltage input relative to V <sub>SSD</sub>   | −0.5 | –   | 1.95                  | V     | Absolute max                           |
| SID3     | V <sub>GPIO_ABS</sub>       | GPIO voltage   | −0.5 | –   | V <sub>DD</sub> + 0.5 | V     | Absolute max                           |
| SID4     | I <sub>GPIO_ABS</sub>       | Maximum current per GPIO   | −25  | –   | 25                    | mA    | Absolute max                           |
| SID5     | I <sub>GPIO_injection</sub> | GPIO injection current, Max for V <sub>IH</sub> > V <sub>DDD</sub> , and Min for V <sub>IL</sub> < V <sub>SS</sub> | −0.5 | –   | 0.5                   | mA    | Absolute max, current injected per pin |
| BID57    | ESD_HBM                     | Electrostatic discharge human body model   | 2200 | –   | –                     | V     | –                                      |
| BID58    | ESD_CDM                     | Electrostatic discharge charged device model   | 500  | –   | –                     | V     | –                                      |
| BID61    | LU                          | Pin current for latch-up   | −200 | –   | 200                   | mA    | –                                      |

### Device-Level Specifications

All specifications are valid for −40 °C ≤ T<sub>A</sub> ≤ 85 °C and T<sub>J</sub> ≤ 100 °C, except where noted. Specifications are valid for 1.71 V to 5.5 V, except where noted.

Table 6. DC Specifications

| Spec ID#   | Parameter         | Description   | Min  | Typ | Max  | Units | Details/<br>Conditions             |
|--|-------------------|---|------|-----|------|-------|------------------------------------|
| SID6   | V <sub>DD</sub>   | Power supply input voltage (V <sub>DDA</sub> = V <sub>DDD</sub> = V <sub>DD</sub> )             | 1.8  | –   | 5.5  | V     | With regulator enabled             |
| SID7   | V <sub>DD</sub>   | Power supply input voltage unregulated (V <sub>DDA</sub> = V <sub>DDD</sub> = V <sub>DD</sub> ) | 1.71 | 1.8 | 1.89 | V     | Internally unregulated Supply      |
| SID8   | V <sub>DDR</sub>  | Radio supply voltage (Radio ON)   | 1.9  | –   | 5.5  | V     | –                                  |
| SID8A  | V <sub>DDR</sub>  | Radio supply voltage (Radio OFF)  | 1.71 | –   | 5.5  | V     | –                                  |
| SID9   | V <sub>CCD</sub>  | Digital regulator output voltage (for core logic)   | –    | 1.8 | –    | V     | –                                  |
| SID10  | C <sub>VCCD</sub> | Digital regulator output bypass capacitor   | 1    | 1.3 | 1.6  | μF    | X5R ceramic or better              |
| <b>Active Mode, V<sub>DD</sub> = 1.71 V to 5.5 V</b> |                   |   |      |     |      |       | –                                  |
| SID13  | I <sub>DD3</sub>  | Execute from flash; CPU at 3 MHz  | –    | 2.1 | –    | mA    | T = 25 °C, V <sub>DD</sub> = 3.3 V |
| SID14  | I <sub>DD4</sub>  | Execute from flash; CPU at 3 MHz  | –    | –   | –    | mA    | T = −40 °C to 85 °C                |
| SID15  | I <sub>DD5</sub>  | Execute from flash; CPU at 6 MHz  | –    | 2.5 | –    | mA    | T = 25 °C, V <sub>DD</sub> = 3.3 V |
| SID16  | I <sub>DD6</sub>  | Execute from flash; CPU at 6 MHz  | –    | –   | –    | mA    | T = −40 °C to 85 °C                |
| SID17  | I <sub>DD7</sub>  | Execute from flash; CPU at 12 MHz   | –    | 4   | –    | mA    | T = 25 °C, V <sub>DD</sub> = 3.3 V |
| SID18  | I <sub>DD8</sub>  | Execute from flash; CPU at 12 MHz   | –    | –   | –    | mA    | T = −40 °C to 85 °C                |

#### Note

- Usage above the absolute maximum conditions listed in Table 5 may cause permanent damage to the device. Exposure to absolute maximum conditions for extended periods of time may affect device reliability. The maximum storage temperature is 150 °C in compliance with JEDEC Standard JESD22-A103, High Temperature Storage Life. When used below absolute maximum conditions but above normal operating conditions, the device may not operate to specification.

**Table 6. DC Specifications** (continued)

| Spec ID#   | Parameter         | Description                       | Min | Typ  | Max | Units | Details/<br>Conditions                                    |
|--|-------------------|-----------------------------------|-----|------|-----|-------|---|

| SID183   | IDAC2                  | INL for 7-bit resolution                       | –3   | –   | 3   | LSB   | –   |
| SID184   | SNR                    | Ratio of counts of finger to noise             | 5    | –   | –   | Ratio | Capacitance range of 9 to 35 pF, 0.1 pF sensitivity. Radio is not operating during the scan |
| SID185   | I <sub>DAC1_CRT1</sub> | Output current of IDAC1 (8 bits) in High range | –    | 612 | –   | μA    | –   |
| SID186   | I <sub>DAC1_CRT2</sub> | Output current of IDAC1 (8 bits) in Low range  | –    | 306 | –   | μA    | –   |
| SID187   | I <sub>DAC2_CRT1</sub> | Output current of IDAC2 (7 bits) in High range | –    | 305 | –   | μA    | –   |
| SID188   | I <sub>DAC2_CRT2</sub> | Output current of IDAC2 (7 bits) in Low range  | –    | 153 | –   | μA    | –   |

## Digital Peripherals

### Timer

**Table 21. Timer DC Specifications**

| Spec ID | Parameter  | Description                         | Min | Typ | Max | Units | Details/Conditions |
|---------|------------|-------------------------------------|-----|-----|-----|-------|--------------------|
| SID189  | $I_{TIM1}$ | Block current consumption at 3 MHz  | –   | –   | 50  | μA    | 16-bit timer       |
| SID190  | $I_{TIM2}$ | Block current consumption at 12 MHz | –   | –   | 175 | μA    | 16-bit timer       |
| SID191  | $I_{TIM3}$ | Block current consumption at 48 MHz | –   | –   | 712 | μA    | 16-bit timer       |

**Table 22. Timer AC Specifications**

| Spec ID | Parameter        | Description                    | Min                | Typ | Max | Units | Details/Conditions |
|---------|------------------|--------------------------------|--------------------|-----|-----|-------|--------------------|
| SID192  | $T_{TIMFREQ}$    | Operating frequency            | $F_{CLK}$          | –   | 48  | MHz   | –                  |
| SID193  | $T_{CAPWINT}$    | Capture pulse width (internal) | $2 \times T_{CLK}$ | –   | –   | ns    | –                  |
| SID194  | $T_{CAPWEXT}$    | Capture pulse width (external) | $2 \times T_{CLK}$ | –   | –   | ns    | –                  |
| SID195  | $T_{TIMRES}$     | Timer resolution               | $T_{CLK}$          | –   | –   | ns    | –                  |
| SID196  | $T_{TENWIDINT}$  | Enable pulse width (internal)  | $2 \times T_{CLK}$ | –   | –   | ns    | –                  |
| SID197  | $T_{TENWIDEXT}$  | Enable pulse width (external)  | $2 \times T_{CLK}$ | –   | –   | ns    | –                  |
| SID198  | $T_{TIMRESWINT}$ | Reset pulse width (internal)   | $2 \times T_{CLK}$ | –   | –   | ns    | –                  |
| SID199  | $T_{TIMRESEXT}$  | Reset pulse width (external)   | $2 \times T_{CLK}$ | –   | –   | ns    | –                  |

### Counter

**Table 23. Counter DC Specifications**

| Spec ID | Parameter  | Description                         | Min | Typ | Max | Units | Details/Conditions |
|---------|------------|-------------------------------------|-----|-----|-----|-------|--------------------|
| SID200  | $I_{CTR1}$ | Block current consumption at 3 MHz  | –   | –   | 50  | μA    | 16-bit counter     |
| SID201  | $I_{CTR2}$ | Block current consumption at 12 MHz | –   | –   | 175 | μA    | 16-bit counter     |
| SID202  | $I_{CTR3}$ | Block current consumption at 48 MHz | –   | –   | 712 | μA    | 16-bit counter     |

**Table 24. Counter AC Specifications**

| Spec ID | Parameter        | Description                    | Min                | Typ | Max | Units | Details/Conditions |
|---------|------------------|--------------------------------|--------------------|-----|-----|-------|--------------------|
| SID203  | $T_{CTRFREQ}$    | Operating frequency            | $F_{CLK}$          | –   | 48  | MHz   | –                  |
| SID204  | $T_{CTRPWINT}$   | Capture pulse width (internal) | $2 \times T_{CLK}$ | –   | –   | ns    | –                  |
| SID205  | $T_{CTRPWEXT}$   | Capture pulse width (external) | $2 \times T_{CLK}$ | –   | –   | ns    | –                  |
| SID206  | $T_{CTRES}$      | Counter Resolution             | $T_{CLK}$          | –   | –   | ns    | –                  |
| SID207  | $T_{CENWIDINT}$  | Enable pulse width (internal)  | $2 \times T_{CLK}$ | –   | –   | ns    | –                  |
| SID208  | $T_{CENWIDEXT}$  | Enable pulse width (external)  | $2 \times T_{CLK}$ | –   | –   | ns    | –                  |
| SID209  | $T_{CTRRESWINT}$ | Reset pulse width (internal)   | $2 \times T_{CLK}$ | –   | –   | ns    | –                  |
| SID210  | $T_{CTRRESWEXT}$ | Reset pulse width (external)   | $2 \times T_{CLK}$ | –   | –   | ns    | –                  |

### Pulse Width Modulation (PWM)

**Table 25. PWM DC Specifications**

| Spec ID | Parameter  | Description                         | Min | Typ | Max | Units | Details/Conditions |
|---------|------------|-------------------------------------|-----|-----|-----|-------|--------------------|
| SID211  | $I_{PWM1}$ | Block current consumption at 3 MHz  | –   | –   | 50  | μA    | 16-bit PWM         |
| SID212  | $I_{PWM2}$ | Block current consumption at 12 MHz | –   | –   | 175 | μA    | 16-bit PWM         |
| SID213  | $I_{PWM3}$ | Block current consumption at 48 MHz | –   | –   | 741 | μA    | 16-bit PWM         |

**Table 26. PWM AC Specifications**

| Spec ID | Parameter               | Description                   | Min                  | Typ | Max | Units | Details/Conditions |
|---------|-------------------------|-------------------------------|----------------------|-----|-----|-------|--------------------|
| SID214  | T <sub>PWMFREQ</sub>    | Operating frequency           | F <sub>CLK</sub>     | –   | 48  | MHz   | –                  |
| SID215  | T <sub>PWMPWINT</sub>   | Pulse width (internal)        | 2 × T <sub>CLK</sub> | –   | –   | ns    | –                  |
| SID216  | T <sub>PWMEXT</sub>     | Pulse width (external)        | 2 × T <sub>CLK</sub> | –   | –   | ns    | –                  |
| SID217  | T <sub>PWMKILLINT</sub> | Kill pulse width (internal)   | 2 × T <sub>CLK</sub> | –   | –   | ns    | –                  |
| SID218  | T <sub>PWMKILLEXT</sub> | Kill pulse width (external)   | 2 × T <sub>CLK</sub> | –   | –   | ns    | –                  |
| SID219  | T <sub>PWMEINT</sub>    | Enable pulse width (internal) | 2 × T <sub>CLK</sub> | –   | –   | ns    | –                  |
| SID220  | T <sub>PWMENEXT</sub>   | Enable pulse width (external) | 2 × T <sub>CLK</sub> | –   | –   | ns    | –                  |
| SID221  | T <sub>PWMRESWINT</sub> | Reset pulse width (internal)  | 2 × T <sub>CLK</sub> | –   | –   | ns    | –                  |
| SID222  | T <sub>PWMRESWEXT</sub> | Reset pulse width (external)  | 2 × T <sub>CLK</sub> | –   | –   | ns    | –                  |

°C

**Table 27. Fixed I<sup>2</sup>C DC Specifications**

| Spec ID | Parameter         | Description                                 | Min | Typ | Max | Units | Details/Conditions |
|---------|-------------------|---|-----|-----|-----|-------|--------------------|
| SID223  | I <sub>I2C1</sub> | Block current consumption at 100 kHz        | –   | –   | 50  | μA    | –                  |
| SID224  | I <sub>I2C2</sub> | Block current consumption at 400 kHz        | –   | –   | 155 | μA    | –                  |
| SID225  | I <sub>I2C3</sub> | Block current consumption at 1 Mbps         | –   | –   | 390 | μA    | –                  |
| SID226  | I <sub>I2C4</sub> | I <sup>2</sup> C enabled in Deep Sleep mode | –   | –   | 1.4 | μA    | –                  |

**Table 28. Fixed I<sup>2</sup>C AC Specifications**

| SID261   | $V_{\text{FALLPPOR}}$  | BOD trip voltage in Active and Sleep modes | 1.64 | –   | –   | V     | –                  |
| SID262   | $V_{\text{FALLDPSLP}}$ | BOD trip voltage in Deep Sleep mode        | 1.4  | –   | –   | V     | –                  |

**Table 42. Hibernate Reset**

| Spec ID# | Parameter            | Description                        | Min | Typ | Max | Units | Details/Conditions |
|----------|----------------------|------------------------------------|-----|-----|-----|-------|--------------------|
| SID263   | $V_{\text{HBRTRIP}}$ | BOD trip voltage in Hibernate mode | 1.1 | –   | –   | V     | –                  |

### Note

- It can take as much as 20 milliseconds to write to flash. During this time, the device should not be reset, or flash operations will be interrupted and cannot be relied on to have completed. Reset sources include the XRES pin, software resets, CPU lockup states and privilege violations, improper power supply levels, and watchdogs. Make certain that these are not inadvertently activated.

### Voltage Monitors

**Table 43. Voltage Monitor DC Specifications**

| Spec ID | Parameter          | Description              | Min  | Typ  | Max  | Units | Details/Conditions |

PSoC 4 devices follow the part numbering convention described in the following table. All fields are single-character alphanumeric (0, 1, 2, ..., 9, A,B, ..., Z) unless stated otherwise.

### Ordering Code Definitions

Example

The Field Values are listed in the following table:

| Field | Description                | Values      | Meaning                  |
|-------|----------------------------|-------------|--------------------------|
| CY8C  | Cypress Prefix             |             |                          |
| 4     | Architecture               | 4           | PSoC 4                   |
| A     | Family within architecture | 2           | 4200-BLE Family          |
| B     | CPU Speed                  | 4           | 48 MHz                   |
| C     | Flash Capacity             | 8, 7        | 256, 128 KB respectively |
| DE    | Package Code               | FN          | WLCSP                    |
|       |                            | LQ          | QFN                      |
|       |                            | FL          | Thin CSP                 |
| F     | Temperature Range          | I           | Industrial               |
| BLXYZ | Attributes Code            | BL400-BL499 | Bluetooth 4.1 compliant  |
|       |                            | BL500-BL599 | Bluetooth 4.2 compliant  |

## Packaging

**Table 56. Package Characteristics**

| Parameter       | Description                                | Conditions | Min | Typ   | Max | Units   |
|-----------------|--|------------|-----|-------|-----|---------|
| T <sub>A</sub>  | Operating ambient temperature              | –          | –40 | 25.00 | 105 | °C      |
| T <sub>J</sub>  | Operating junction temperature             | –          | –40 | –     | 125 | °C      |
| T <sub>JA</sub> | Package $\theta_{JA}$ (56-pin QFN)         | –          | –   | 16.9  | –   | °C/watt |
| T <sub>JC</sub> | Package $\theta_{JC}$ (56-pin QFN)         | –          | –   | 9.7   | –   | °C/watt |
| T <sub>JA</sub> | Package $\theta_{JA}$ (76-ball WLCSP)      | –          | –   | 20.1  | –   | °C/watt |
| T <sub>JC</sub> | Package $\theta_{JC}$ (76-ball WLCSP)      | –          | –   | 0.19  | –   | °C/watt |
| T <sub>JA</sub> | Package $\theta_{JA}$ (76-ball Thin WLCSP) | –          | –   | 20.9  | –   | °C/watt |
| T <sub>JC</sub> | Package $\theta_{JC}$ (76-ball Thin WLCSP) | –          | –   | 0.17  | –   | °C/watt |
| T <sub>JA</sub> | Package $\theta_{JA}$ (68-ball WLCSP)      | –          | –   | 16.6  | –   | °C/watt |
| T <sub>JC</sub> | Package $\theta_{JC}$ (68-ball WLCSP)      | –          | –   | 0.19  | –   | °C/watt |
| T <sub>JA</sub> | Package $\theta_{JA}$ (68-ball Thin WLCSP) | –          | –   | 16.6  | –   | °C/watt |
| T <sub>JC</sub> | Package $\theta_{JC}$ (68-ball Thin WLCSP) | –          | –   | 0.19  | –   | °C/watt |

**Table 57. Solder Reflow Peak Temperature**

| Package      | Maximum Peak Temperature | Maximum Time at Peak Temperature |
|--------------|--------------------------|----------------------------------|
| All packages | 260 °C                   | 30 seconds                       |

| Package            | MSL   |
|--------------------|-------|
| 56-pin QFN         | MSL 3 |
| All WLCSP packages | MSL 1 |

**Table 59. Package Details**

| Spec ID            | Package            | Description                 |
|--------------------|--------------------|-----------------------------|
| 001-58740 Rev. *C  | 56-pin QFN         | 7.0 mm × 7.0 mm × 0.6 mm    |
| 001-96603 Rev. *A  | 76-ball WLCSP      | 4.04 mm × 3.87 mm × 0.55 mm |
| 002-10658, Rev. ** | 76-ball thin WLCSP | 4.04 mm × 3.87 mm × 0.4 mm  |
| 001-92343 Rev. *A  | 68-ball WLCSP      | 3.52 mm × 3.91 mm × 0.55 mm |
| 001-99408 Rev **   | 68-ball Thin WLCSP | 52 mm × 3.91 mm × 0.4 mm    |

**Figure 8. 56-Pin QFN 7 × 7 × 0.6 mm**

**NOTES:**

1.  HATCH AREA IS SOLDERABLE EXPOSED PAD
2. BASED ON REF JEDEC # MO-248
3. ALL DIMENSIONS ARE IN MILLIMETERS

001-58740 °C

The center pad on the QFN package should be connected to ground (VSS) for best mechanical, thermal, and electrical performance.

## WLCSP Compatibility

The PSoC 4XXX\_BLE family has products with 128 KB (16KB SRAM) and 256 KB (32KB SRAM) Flash. Package pin-outs and sizes are identical for the 56-pin QFN package but are different in one dimension for the 68-ball WLCSP.

The 256KB Flash product has an extra column of balls which are required for mechanical integrity purposes in the Chip-Scale package. With consideration for this difference, the land pattern on the PCB may be designed such that either product may be used with no change to the PCB design.

Figure 9 shows the 128KB and 256 KB Flash CSP packages.

**Figure 9. 128KB and 256 KB Flash CSP Packages**

The rightmost column of (all NC, No Connect) balls in the 256K BLE WLCSP is for mechanical integrity purposes. The package is thus wider (3.2 mm versus 2.8 mm). All other dimensions are identical. Cypress will provide layout symbols for PCB layout.

The scheme in Figure 9 is implemented to design the PCB for the 256K BLE package with the appropriate space requirements thus allowing use of either package at a later time without redesigning the Printed Circuit Board.

| SE     | 0.321 BSC  |      |      |

**NOTES:**

- ALL DIMENSIONS ARE IN MILLIMETERS.
- SOLDER BALL POSITION DESIGNATION PER JEP95, SECTION 3, SPP-020.
- "e" REPRESENTS THE SOLDER BALL GRID PITCH.
- SYMBOL "MD" IS THE BALL MATRIX SIZE IN THE "D" DIRECTION. SYMBOL "ME" IS THE BALL MATRIX SIZE IN THE "E" DIRECTION. N IS THE NUMBER OF POPULATED SOLDER BALL POSITIONS FOR MATRIX SIZE MD X ME.
- DIMENSION "b" IS MEASURED AT THE MAXIMUM BALL DIAMETER IN A PLANE PARALLEL TO DATUM C.
- "SD" AND "SE" ARE MEASURED WITH RESPECT TO DATUMS A AND B AND DEFINE THE POSITION OF THE CENTER SOLDER BALL IN THE OUTER ROW. WHEN THERE IS AN ODD NUMBER OF SOLDER BALLS IN THE OUTER ROW, "SD" OR "SE" = 0. WHEN THERE IS AN EVEN NUMBER OF SOLDER BALLS IN THE OUTER ROW, "SD" = eD/2 AND "SE" = eE/2.
- A1 CORNER TO BE IDENTIFIED BY CHAMFER, LASER OR INK MARK METALIZED MARK, INDENTATION OR OTHER MEANS.
- "+" INDICATES THE THEORETICAL CENTER OF DEPOPULATED SOLDER BALLS.
- JEDEC SPECIFICATION NO. REF : N/A

- ALL DIMENSIONS ARE IN MILLIMETERS.
- SOLDER BALL POSITION DESIGNATION PER JEP95, SECTION 3, SPP-020.
- "e" REPRESENTS THE SOLDER BALL GRID PITCH.
- SYMBOL "MD" IS THE BALL MATRIX SIZE IN THE "D" DIRECTION. SYMBOL "ME" IS THE BALL MATRIX SIZE IN THE "E" DIRECTION. N IS THE NUMBER OF POPULATED SOLDER BALL POSITIONS FOR MATRIX SIZE MD X ME.
- DIMENSION "b" IS MEASURED AT THE MAXIMUM BALL DIAMETER IN A PLANE PARALLEL TO DATUM C.
- "SD" AND "SE" ARE MEASURED WITH RESPECT TO DATUMS A AND B AND DEFINE THE POSITION OF THE CENTER SOLDER BALL IN THE OUTER ROW. WHEN THERE IS AN ODD NUMBER OF SOLDER BALLS IN THE OUTER ROW, "SD" OR "SE" = 0. WHEN THERE IS AN EVEN NUMBER OF SOLDER BALLS IN THE OUTER ROW, "SD" = eD/2 AND "SE" = eE/2.
- A1 CORNER TO BE IDENTIFIED BY CHAMFER, LASER OR INK MARK METALIZED MARK, INDENTATION OR OTHER MEANS.
- "+" INDICATES THE THEORETICAL CENTER OF DEPOPULATED SOLDER BALLS.

002-10658 \*\*

## Acronyms

**Table 60. Acronyms Used in this Document**

| Acronym | Description   |
|---------|---|
| abus    | analog local bus  |
| ADC     | analog-to-digital converter   |
| AG      | analog global   |
| AHB     | AMBA (advanced microcontroller bus architecture) high-performance bus, an Arm data transfer bus |
| ALU     | arithmetic logic unit   |
| AMUXBUS | analog multiplexer bus  |
| API     | application programming interface   |
| APSR    | application program status register   |
| Arm®    | advanced RISC machine, a CPU architecture   |
| ATM     | automatic thump mode  |
| BW      | bandwidth   |
| CAN     | Controller Area Network, a communications protocol  |
| CMRR    | common-mode rejection ratio   |
| CPU     | central processing unit   |
| CRC     | cyclic redundancy check, an error-checking protocol   |
| DAC     | digital-to-analog converter, see also IDAC, VDAC  |
| DFB     | digital filter block  |
| DIO     | digital input/output, GPIO with only digital capabilities, no analog. See GPIO.                 |
| DMIPS   | Dhrystone million instructions per second   |
| DMA     | direct memory access, see also TD   |
| DNL     | differential nonlinearity, see also INL   |
| DNU     | do not use  |
| DR      | port write data registers   |
| DSI     | digital system interconnect   |
| DWT     | data watchpoint and trace   |
| ECC     | error correcting code   |
| ECO     | external crystal oscillator   |
| EEPROM  | electrically erasable programmable read-only memory   |
| EMI     | electromagnetic interference  |
| EMIF    | external memory interface   |
| EOC     | end of conversion   |
| EOF     | end of frame  |
| EPSR    | execution program status register   |
| ESD     | electrostatic discharge   |

| LUT                      | lookup table   |
| LVD                      | low-voltage detect, see also LVI                       |
| LVI                      | low-voltage interrupt, see also HVI                    |
| LVTTTL                   | low-voltage transistor-transistor logic                |
| MAC                      | multiply-accumulate                                    |
| MCU                      | microcontroller unit                                   |
| MISO                     | master-in slave-out                                    |
| NC                       | no connect   |
| NMI                      | nonmaskable interrupt                                  |
| NRZ                      | non-return-to-zero                                     |
| NVIC                     | nested vectored interrupt controller                   |
| NVL                      | nonvolatile latch, see also WOL                        |
| opamp                    | operational amplifier                                  |
| PAL                      | programmable array logic, see also PLD                 |

**Table 60. Acronyms Used in this Document** *(continued)*

| Acronym | Description  |
|---------|--|
| PC      | program counter  |
| PCB     | printed circuit board  |
| PGA     | programmable gain amplifier                                  |
| PHUB    | peripheral hub   |
| PHY     | physical layer   |
| PICU    | port interrupt control unit                                  |
| PLA     | programmable logic array                                     |
| PLD     | programmable logic device, see also PAL                      |
| PLL     | phase-locked loop  |
| PMDD    | package material declaration data sheet                      |
| POR     | power-on reset   |
| PRES    | precise power-on reset                                       |
| PRS     | pseudo random sequence                                       |
| PS      | port read data register                                      |
| PSoC®   | Programmable System-on-Chip™                                 |
| PSRR    | power supply rejection ratio                                 |
| PWM     | pulse-width modulator  |
| RAM     | random-access memory   |
| RISC    | reduced-instruction-set computing                            |
| RMS     | root-mean-square   |
| RTC     | real-time clock  |
| RTL     | register transfer language                                   |
| RTR     | remote transmission request                                  |
| RX      | receive  |
| SAR     | successive approximation register                            |
| SC/CT   | switched capacitor/continuous time                           |
| SCL     | I <sup>2</sup> C serial clock                                |
| SDA     | I <sup>2</sup> C serial data                                 |
| S/H     | sample and hold  |
| SINAD   | signal to noise and distortion ratio                         |
| SIO     | special input/output, GPIO with advanced features. See GPIO. |
| SOC     | start of conversion  |
| SOF     | start of frame   |
| SPI     | Serial Peripheral Interface, a communications protocol       |
| SR      | slew rate  |
| SRAM    | static random access memory                                  |
| SRES    | software reset   |
| SWD     | serial wire debug, a test protocol                           |

**Table 60. Acronyms Used in this Document** *(continued)*

| Acronym | Description  |
|---------|--|
| SWV     | single-wire viewer   |
| TD      | transaction descriptor, see also DMA                                   |
| THD     | total harmonic distortion  |
| TIA     | transimpedance amplifier   |
| TRM     | technical reference manual   |

| UART    | Universal Asynchronous Transmitter Receiver, a communications protocol |
| UDB     | universal digital block  |
| USB     | Universal Serial Bus   |
| USBIO   | USB input/output, PSoC pins used to connect to a USB port              |
| VDAC    | voltage DAC, see also DAC, IDAC  |
| WDT     | watchdog timer   |
| WOL     | write once latch, see also NVL   |
| WRES    | watchdog timer reset   |
| XRES    | external reset I/O pin   |
| XTAL    | crystal  |

## Document Conventions

### Units of Measure

**Table 61. Units of Measure**

| Symbol | Unit of Measure        |
|--------|------------------------|
| °C     | degrees Celsius        |
| dB     | decibel                |
| fF     | femto farad            |
| Hz     | hertz                  |
| KB     | 1024 bytes             |
| kbps   | kilobits per second    |
| Khr    | kilohour               |
| kHz    | kilohertz              |
| kΩ     | kilo ohm               |
| ksps   | kilosamples per second |
| LSB    | least significant bit  |
| Mbps   | megabits per second    |
| MHz    | megahertz              |
| MΩ     | mega-ohm               |
| Msps   | megasamples per second |
| μA     | microampere            |
| μF     | microfarad             |
| μH     | microhenry             |
| μs     | microsecond            |
| μV     | microvolt              |
| μW     | microwatt              |
| mA     | milliampere            |
| ms     | millisecond            |
| mV     | millivolt              |
| nA     | nanoampere             |
| ns     | nanosecond             |
| nV     | nanovolt               |
| Ω      | ohm                    |
| pF     | picofarad              |
| ppm    | parts per million      |
| ps     | picosecond             |
| s      | second                 |
| sps    | samples per second     |
| sqrtHz | square root of hertz   |
| V      | volt                   |

This document, including any software or firmware included or referenced in this document ("Software"), is owned by Cypress under the intellectual property laws and treaties of the United States and other countries worldwide. Cypress reserves all rights under such laws and treaties and does not, except as specifically stated in this paragraph, grant any license under its patents, copyrights, trademarks, or other intellectual property rights. If the Software is not accompanied by a license agreement and you do not otherwise have a written agreement with Cypress governing the use of the Software, then Cypress hereby grants you a personal, non-exclusive, nontransferable license (without the right to sublicense) (1) under its copyright rights in the Software (a) for Software provided in source code form, to modify and reproduce the Software solely for use with Cypress hardware products, only internally within your organization, and (b) to distribute the Software in binary code form externally to end users (either directly or indirectly through resellers and distributors), solely for use on Cypress hardware product units, and (2) under those claims of Cypress's patents that are infringed by the Software (as provided by Cypress, unmodified) to make, use, distribute, and import the Software solely for use with Cypress hardware products. Any other use, reproduction, modification, translation, or compilation of the Software is prohibited.

TO THE EXTENT PERMITTED BY APPLICABLE LAW, CYPRESS MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS DOCUMENT OR ANY SOFTWARE OR ACCOMPANYING HARDWARE, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. No computing device can be absolutely secure. Therefore, despite security measures implemented in Cypress hardware or software products, Cypress does not assume any liability arising out of any security breach, such as unauthorized access to or use of a Cypress product. In addition, the products described in these materials may contain design defects or errors known as errata which may cause the product to deviate from published specifications. To the extent permitted by applicable law, Cypress reserves the right to make changes to this document without further notice. Cypress does not assume any liability arising out of the application or use of any product or circuit described in this document. Any information provided in this document, including any sample design information or programming code, is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. Cypress products are not designed, intended, or authorized for use as critical components in systems designed or intended for the operation of weapons, weapons systems, nuclear installations, life-support devices or systems, other medical devices or systems (including resuscitation equipment and surgical implants), pollution control or hazardous substances management, or other uses where the failure of the device or system could cause personal injury, death, or property damage ("Unintended Uses"). A critical component is any component of a device or system whose failure to perform can be reasonably expected to cause the failure of the device or system, or to affect its safety or effectiveness. Cypress is not liable, in whole or in part, and you shall and hereby do release Cypress from any claim, damage, or other liability arising from or related to all Unintended Uses of Cypress products. You shall indemnify and hold Cypress harmless from and against all claims, costs, damages, and other liabilities, including claims for personal injury or death, arising from or related to any Unintended Uses of Cypress products.
