Note. The above rating values apply under the following test conditions.

(1) Ambient temperature: 20±2°C

(2) Ambient humidity: 65±5%

(3) Operating frequency: 30 operations/min

## **Approved Safety Standard**

#### The items shown in the "List of Models" above are not standard approved models.

Consult your OMRON sales representative for specific models with standard approvals.

## UL (UL1054) /CSA (CSA C22.2 No.55)

| Ambient operating humic   | dity                                   | 85% max. (for +5°C to +35°C)                      |  |   |  |  |
| Weight  |  | Approx. 0.5 g (pin plunger models)                |  |   |  |  |

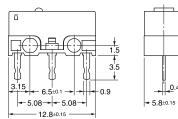

Note. The data given above are initial values.

\*1. The values are at Free Position and Total Travel Position values for pin plunger, and Total Travel Position value for lever. Close or open circuit of the contact is 1ms max.

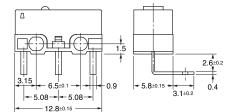

\*2. For testing conditions, consult your OMRON sales representative.

## Terminals/Appearances (Unit: mm)

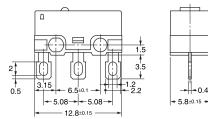

#### PCB terminals (Straight)

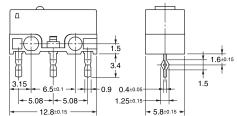

#### PCB terminals (Right-angled)

#### Solder terminals

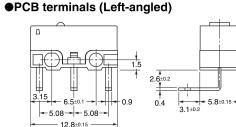

## Self-clinching PCB terminals

# <PCB Mounting Dimensions (Reference)>

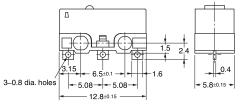

D 2 F

#### Compact solder terminals

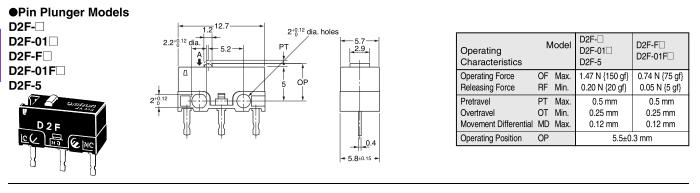

Mounting Holes (Unit: mm)

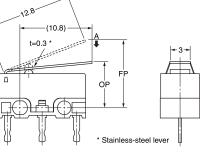

D 2 F

## Dimensions (Unit: mm) /Operating Characteristics

The following illustrations and drawings are for D2F models with PCB terminals (straight). Self-clinching, solder, compact solder, and right-angled, left angled terminals are omitted from the following drawings. Refer to the **previous page** for these terminals. When ordering, replace  $\Box$  with the code for the terminal that you need. See the "List of Models" for available combinations of models.

D 2 F

Note 1. Unless otherwise specified, a tolerance of  $\pm 0.4$  mm applies to all dimensions. Note 2. The operating characteristics are for operation in the A direction ( $\clubsuit$ ).

## Precautions

★Please refer to "Basic Switches Common Precautions" for correct use.

#### Cautions

#### Soldering

Terminal connection

When soldering, make sure that the temperature of the soldering iron tip is not higher than 300°C, and complete the soldering within 3 seconds. Do not apply any external force for 1 minute after soldering. Soldering at an excessively high temperature or soldering for more than 3 seconds may deteriorate the characteristics of the Switch.

Connecting to PCB terminal Boards

When using automatic soldering baths, we recommend soldering at  $260^{\circ}C \pm 5^{\circ}C$  within 5 seconds. Make sure that the liquid surface of the solder does not flow over the edge of the board.

When soldering terminals manually, perform soldering within 3 seconds at iron tip temperature not higher than 350°C. Do not apply any external force for at least 1 minute after soldering. When applying solder, keep the solder away from the case of the Switch and do not allow solder or flux to flow into the case.

#### Mounting

Use M2 mounting screws with plane washers or spring washers to securely mount the Switch. Tighten the screws to a torque of 0.08 to 0.1 N·m  $\{0.8 \text{ to } 1 \text{ kgf} \cdot \text{cm}\}$ .

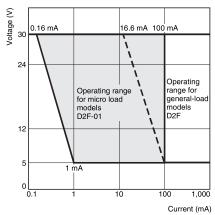

Correct Use

#### Using Micro Loads

Using a model for ordinary loads to open or close the contact of a micro load circuit may result in faulty contact. Use models that operate in the following range. However, even when using micro load models within the following operating range, if inrush current occurs when the contact is opened or closed, it may increase the contact wear and so decrease durability. Therefore, insert a contact protection circuit where necessary. The minimum applicable load is the N-level reference value. This value indicates the malfunction reference level for the reliability level of 60% ( $\lambda_{60}$ ).

#### (JIS C5003)

The equation,  $\lambda_{60}=0.5\times10^{-6}$ /operation, indicates that the estimated malfunction rate is less than  $\frac{1}{2,000,000}$  operations with a reliability level of 60%.

Application examples provided in this document are for reference only. In actual applications, confirm equipment functions and safety before using the product.
 Consult your OMRON representative before using the product under conditions which are not described in the manual or applying the product to nuclear control systems, railroad systems, aviation systems, vehicles, combustion systems, medical equipment, amusement machines, safety equipment, and other systems or equipment that may have a serious influence on lives and property if used improperty. Make sure that the ratings and performance characteristics of the product provide a margin of safety for the system or equipment, and be sure to provide the system or equipment with double safety mechanisms.

Note: Do not use this document to operate the Unit.
