The ● denotes the specifications which apply over full operating temperature range.

For MIL-STD components, please refer to LTC 883C data sheet for test listing and parameters.

Note 1: Offset voltage for the OP-07A is measured 60 seconds after power is applied. All other grades are measured with high speed test equipment, approximately 1 second after power is applied.

Note 2: This parameter is tested on a sample basis only.

Note 3: Long term Input Offset Voltage Stability refers to the averaged trend line of V_{OS} versus Time over extended periods after the first 30 days of operation. Excluding the initial hour of operation, changes in V_{OS} during the first 30 operating days are typically 2.5 μV .

Note 4: This parameter is guaranteed by design.

Note 5: The OP-07D is available by special request.

TYPICAL PERFORMANCE CHARACTERISTICS

**Low Frequency Noise
(Closed Loop Gain = 25,000)**

**Total Input Noise Voltage
vs Frequency**

**Open-Loop
Frequency Response**

**Common Mode Rejection Ratio
vs Frequency**

**Power Supply Rejection Ratio
vs Frequency**

**Long Term Stability of Four
Representative Units**

Warm-Up Drift

**Offset Voltage Change Due
to Thermal Shock**

**Open-Loop Gain vs
Temperature**

Power Consumption vs Power Supply

Output Short-Circuit Current vs Time

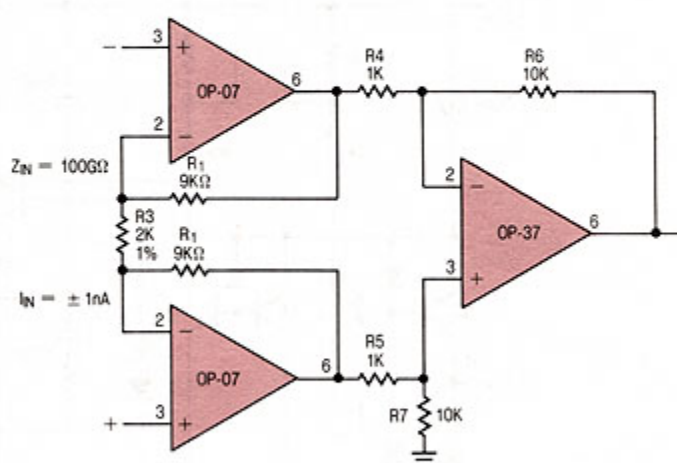

TYPICAL APPLICATIONS

Precision Summing Amplifier

Instrumentation Amplifier

$$A_V = \frac{R_6}{R_4} \left(\frac{2R_1}{R_3} + 1 \right)$$

$$A_V = 100$$

TEST CIRCUIT DIAGRAMS

Offset Voltage Test Circuit †

$$A_V = 1000$$

† This circuit is also used as the burn-in configuration with supply voltages changed to ± 20 Volts.

Offset Nulling and Low Frequency Noise Test Circuit

NOTES:

- 1) RC APPROXIMATELY 10Hz FILTER
- 2) OBSERVE OUTPUT FOR 10 SECONDS

$$A_V = 25000$$

Application Tip:

When the OP-07 is used as a replacement in 725, 108/108A, 308/308A applications, removal of external compensation is optional. For conventionally nulled 741 type applications, external trimming should be removed. Care should be taken to avoid thermocouple voltages caused by temperature variations between the input terminals or dissimilar metals.

PACKAGE DESCRIPTION

N8 Package
8 Lead Plastic
