

# MIL-DTL-26482

## Performance Specifications

### Series 2

## Performance Specifications

### Operating Temperature Range

Classes A, L and S\*: -55°C to +200°C (-67°F to +392°F)

Classes W and ZC\*: -55°C to +175°C (-67°F to +347°F)

### Material and Finish Data (Class)

A – aluminum shell, black anodized finish

L – aluminum shell, electroless nickel finish

W – aluminum shell, olive drab cadmium over nickel base

S\* – stainless steel shell, passivated

BN\* – aluminum shell, black nickel finish (Aero P/N only)

### Corrosion Resistance

Classes A, S\*, W and BN\* withstand 500-hour salt spray.

Class L withstands 48-hour salt spray.

### Environmental Seal

Wired, mated connectors with specified accessories attached, shall meet the altitude-immersion test specified in MIL-DTL-26482 Series 2.

### Fluid Resistance

Connectors resist specified immersions in MIL-PRF-7808 (lubricating oil), MIL-PRF-23699 (lubricating oil), MIL-PRF-5606 (hydraulic fluid), M2-V Chevron oil, Coolanol 25, ASTM D4814 (gasoline), SAE-AMS1424 Type I (defrosting fluid), MIL-DTL-5624 (JP-5), and solvents specified in Method 215 of MIL-STD-202.

\* Not on QPL, can be supplied to Aero-Electric P/N only.

### Durability

Mated connectors withstand a minimum of 250 mating cycles for RFI plug (MS3475) and 500 cycles for standard plug (MS3476).

### Shock and Vibration Requirements

Wired, mated connectors shall not be damaged, coupling ring shall not loosen, and there shall be no interruption of electrical continuity longer than one microsecond when subjected to the following:

### Shock

Mated connectors withstand a pulse of approximate half sine wave of 300 G magnitude with duration of three milliseconds applied in each direction of the three major axes.

### Vibration

Mated connectors withstand the following vibration levels:

- Random vibration per MIL-STD-202, method 214, test condition II, letter J.

### Shielding Effectiveness

RFI attenuation at the specified frequency meets the requirements of MIL-DTL-26482 Series 2.

- RFI shielding effectiveness of mated connectors with RFI backshells is measured in a triaxial radio frequency leakage fixture.

### Shell-to-Shell Conductivity

- With RFI spring fingers, the maximum potential drop shall not exceed 5 millivolts.
- Without spring fingers, the maximum potential drop shall not exceed 200 millivolts.

### Voltage Rating

Service Rating	Suggested Operating Voltage**		Test Voltage	Test Voltage	Test Voltage	Test Voltage
	(Sea Level)		Sea Level	50,000 Ft.	70,000 Ft.	110,000 Ft.
	AC (RMS)	DC	V RMS	V RMS	V RMS	V RMS
I	600	850	1,500	500	375	200
II	1,000	1,275	2,300	750	500	200

\*\* To be used by designer only as a guide.

## MIL-DTL-26482 Part Number Development Series 2

### Military and Aero-Electric Part Number Development

<b>Mil. Prefix</b>	<b>MS34</b>	<b>70</b>	<b>L</b>	<b>12 -</b>	<b>10</b>	<b>P</b>	<b>W</b>	
<b>Aero Prefix</b>	<b>AE7</b>	<b>70</b>	<b>L</b>	<b>12 -</b>	<b>10</b>	<b>P</b>	<b>W</b>	<b>-340</b>
<b>Shell type</b>								
70 = Narrow flange receptacle								
71 = Cable connecting receptacle								
72 = Wide flange receptacle								
74 = Jam nut receptacle								
75 = RFI grounding plug								
76 = Straight plug								
<b>Class (Material and Finish)</b>								
A = Aluminum shell, black anodized finish (not available in RFI plug)								
L = Aluminum shell, electroless nickel finish								
W = Aluminum shell, olive drab cadmium over electroless nickel base								
S* = Stainless steel shell, passivated (Aero part number only)								
BN* = Aluminum shell, Black Nickel finish, (RoHS), (Aero part number only)								
<b>Shell Size</b>								
8, 10, 12, 14, 16, 18, 20, 22 or 24								
<b>Insert Arrangement</b>								
See pages 125 thru 126								
<b>Contact Style</b>								
P = Pin								
S = Socket								
A = Pin connector less pins (with intent to use non-std contact)								
B = Socket connector less sockets (with intent to use non-std contacts)								
<b>Polarization</b>								
N = Normal (not included in part number)								
W, X, Y or Z = Alternate insert polarizations (see pages 123 for position availability)								
<b>Modification (applies to Aero part numbers only)</b>								
01 = Less contacts (is not marked on the part)								
340 = Connector kitted with M85049/31-XXX E-nut								
341 = Connector kitted with M85049/52-1-XXX straight clamp								
342 = Connector kitted with M85049/51-1-XXX right angle clamp								

\* Not on QPL, can be supplied to Aero part number only. Consult factory for availability.

**Note 1:** Each connector is furnished with contacts unless ordered less contacts (L/C) as follows: One spare contact for inserts requiring 2 to 26 of each contact and two spares for inserts with 27 or more of each size, and a minimum of one sealing plug up to 15% of the number of contacts. In addition, one plastic insetion/removal tool of each size is included.

**Note 2:** Proper part number marking has no "0" in front of single digit shell size ( 8) and no "0" after the dash between shell size and single digit layout. Example of each: MS3470W8-33P and MS3470W10-6P. In both "N" for normal was omitted.

**Note 3:** Insert layouts 8-2, 8-3 and 8-4 can only be ordered to Aero-Electric part number. Non standard contacts are required and to avoid confusion are sold "with contacts" only. See page 80 for the correct contact part numbers.

**MS3470**  
**Narrow Flange Receptacle**  
**AE770**

**Note:** Test Current and Maximum Voltage Drop when tested with silver-plated wire at 25°C.

## MIL-DTL-26482 Contact Installation Instructions Series 2

# Contact Installation Instructions

## Crimping Contacts

1. Select the appropriate crimp tool and ensure that the proper crimp head positioner is used.
2. Cycle the tool to be sure the indentors are open.
3. Determine the correct selector setting for the wire size from the data plate on the positioner (turret head assembly) and set the selector knob on the crimp tool to match.
4. Place the contact, mating end first, into the tool.
5. Insert the stripped wire into the hollow end of the contact. Be sure the wire is inserted as far as it will go.
6. Close the tool completely to crimp. Unless the tool is closed completely, the tool will not release the contact.
7. Remove the crimped contact from the tool. Check the inspection hole to verify that the wire is fully inserted.

## Insertion of Contacts

1. Before inserting the contacts, unscrew the accessories (clamps, backshells or adapters) from rear of plug or receptacle. Slide the hardware over the wire bundle in the proper order for reassembly after all the contacts are inserted.
2. To assist insertion of contacts, lubricate insulator (grommet) cavities with isopropyl alcohol. Alcohol will evaporate and will not leave a conductive film. **Caution: Never use any lubricant other than isopropyl alcohol.**

3. Place the correct insertion tool on the contact so that the wire runs along the groove in the tool. (Tool tip will butt against the shoulder.) Hold the plug or receptacle body firmly.
4. Beginning with a center cavity, insert the contact into the insulator with a slow, even pressure until the contact snaps into position. Make sure the contact and tool are held perpendicular to the face of the insert during the contact installation or the grommet could be damaged.
  - 4.1 If contacts are not inserted all the way prior to removing insertion tool, do not try to reinsert the insertion tool. Instead, remove the contact and try again; otherwise reinserting the insertion tool may damage the inside of the contact cavity.
5. Remove tool and check the face of the connector for proper contact installation. Proper installation may also be checked by pulling back lightly on the wire to make sure the contact is properly seated.

## Completion

After all the cavities have been filled, slide the hardware back into position on the connector and tighten.

## Extraction of Contacts (Rework)

1. Slide the hardware back over the wire bundle.
2. Select the appropriate tool. Place the wire into the extraction tool of the pin or socket.
3. Slowly slide the extraction tool down wire into the contact cavities until the tool tip bottoms against the contact shoulder, expanding the clip retaining tines. Hold the wire firmly in the tool and pull the wired contact and tool straight out of the rear of the insulator.

Size	Pin Contact	Socket Contact	Basic Crimp Tool	Pin Positioner	Socket Positioner	Insertion/Removal Tool
20	M39029/4-110	M39029/5-115	M22520/1-01	M22520/1-02 Red	M22520/1-02 Red	M81969/14-11
			M22520/2-01	M22520/2-02	M22520/2-02

\* Aero-Electric proprietary size 20 contacts used in 8-2, 8-3 and 8-4 layouts only.

## MIL-DTL-26482 Series 2

### Polarization, Insert Availability & Contact Information per MIL-STD-1669

#### Polarization (Insert Clocking)

1. In the normal insert clocking position (position N), the insert centerline coincides with the centerline of the master keyway (key) of the shell:  $L = 0^\circ$ .
2. In the alternate clocking positions (W, X, Y and Z), the pin insert (viewing from mating side) is rotated clockwise relative to the centerline of the master keyway (key) of the shell.
3. The socket insert is rotated counter-clockwise.
4. Plugs have keys; receptacles have keyways.

**Note:** Be careful with alternate positions. See table below for position availability on layouts of interest.

#### Insert Availability, Contact Information and Clocking Positions

\* Not qualified to MIL-DTL-26482 Series 2. These layouts were designed to mate with solder Series 1 connectors using proprietary Aero-Electric contacts (not QPL'd to M39029) and to avoid confusion are sold only "with contacts".

\*\* Non MIL-STD-1669 layouts, available to Aero-Electric part numbers only and utilize standard M39029 contacts. These layouts were originally designed for use in AC3475 Arctic Coupling RFI plugs and AC3474 jam nut receptacles.
