### NOTES

<sup>1</sup>At output switch point, V<sub>O</sub> = 1.4 V, R<sub>S</sub> = 0 Ω with V<sub>+</sub> from 5 V, and over the full input common-mode range (0 V to V<sub>+</sub> – 1.5 V).

<sup>2</sup>Guaranteed by design.

<sup>3</sup>Sample tested.

<sup>4</sup>The input common-mode voltage or input signal voltage should not be allowed to go negative by more than 0.3 V. The upper end of the common-mode voltage range is V<sub>+</sub> – 1.5 V, but either or both inputs can go to 30 V without damage.

<sup>5</sup>R<sub>L</sub> ≥ 15 kΩ, V<sub>+</sub> = 15 V, V<sub>CM</sub> = 1.5 V to 13.5 V.

Specifications subject to change without notice.

### NOTES

<sup>1</sup>Absolute maximum ratings apply to both DICE and packaged parts, unless otherwise noted. Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those listed in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

<sup>2</sup>θ<sub>JA</sub> is specified for worst-case mounting conditions, i.e., θ<sub>JA</sub> is specified for device soldered to printed circuit board for SOIC package.

### CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although the CMP04 features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.
